ABSTRACT

Current Population Survey, 2023 Annual Social and Economic (ASEC) Supplement conducted by the Bureau of the Census for the Bureau of Labor Statistics. — Washington: U.S. Census Bureau [producer and distributor], 2023.

TYPE OF FILE

Microdata; unit of observation is individuals, families, and households.

UNIVERSE DESCRIPTION

The universe is the civilian noninstitutional population of the United States living in housing units and members of the Armed Forces living off post or living with their families on post, as long as at least one civilian adult lives in the same household. A probability sample is used in selecting housing units.

SUBJECT-MATTER DESCRIPTION

This Annual Social and Economic (ASEC) Supplement provides the usual monthly labor force data, but in addition, provides supplemental data on work experience, income, noncash benefits, and migration. Comprehensive work experience information is given on the employment status, occupation, and industry of persons 15 years old and over. Additional data for persons 15 years old and older are available concerning weeks worked and hours per week worked, reason not working full time, total income and income components. Data on employment and income refer to the preceding year, although demographic data refer to the time of the survey.

This file also contains data covering nine noncash income sources: food stamps, school lunch program, employer-provided group health insurance plan, employer-provided pension plan, personal health insurance, Medicaid, Medicare, or military health care, and energy assistance. Characteristics such as age, sex, race, household relationship, and Hispanic origin are shown for each person in the household enumerated.

GEOGRAPHIC COVERAGE

States, regions and divisions are identified in their entirety. Within confidentiality restrictions; indicators are provided for 260 selected core-based statistical areas (CBSA), 42 selected combined

statistical areas (CSA), 277 counties, and 97 principal cities in multi-principal city core-based statistical areas or combined statistical areas. Also within confidentiality restrictions, indicators are provided for metropolitan/nonmetropolitan, central city/balance metropolitan, and CBSA size.

TECHNICAL DESCRIPTION

File Structure: Hierarchical, Rectangular, Column-delimited

File Size:

Record Type	Record Number
Household (SAS/CSV)	88,978
Family (SAS/CSV)	65,767
Person (SAS/CSV)	146,133
ASCII (DAT)	300,878

REFERENCE MATERIAL

Current Population Survey, 2023 ASEC Technical Documentation. The documentation includes this abstract, pertinent information about the file, a glossary, code lists, and a data dictionary.

For information about the Current Population Survey and other Census Bureau data products, be sure to visit our online Question & Answer Center on the Census Bureau's home page at http://www.census.gov/ where you can search our knowledge base and submit questions.

RELATED REPORTS

Data from the ASEC Current Population Survey's file are published most frequently in the Current Population Reports P-20 and P-60 series. In addition, the following associated reports and tables have also been cleared for release: Income, Poverty, Health Insurance, Supplemental Poverty Measure, and Migration.

These reports can be accessed at https://www.census.gov/library/publications.html.

ABSTRACT 1-1

FILE AVAILABILITY

The files are available on the internet. The files may be accessed by going to the Data section of the main CPS website, located here -

https://www.census.gov/programs-surveys/cps/data.html. Additionally, custom tabulations and extracts of CPS microdata are available at https://data.census.gov/mdat/#/.

For more information contact dsd.cps@census.gov.

CONFIDENTIALITY

The Census Bureau has reviewed this data product to ensure appropriate access, use, and disclosure avoidance protection of the confidential source data used to produce this product (Data Management System (DMS) number: **D-0000012591**, Disclosure Review Board (DRB) approval number: **CBDRB-FY23-0429**.)

The DRB supports the Data Stewardship Executive Policy Committee (DSEP) in its efforts to protect Title 13 respondent confidentiality by proposing protection policies and methodologies and reviewing external products such as microdata and tabulation releases for potential disclosure. The DRB coordinates activities that inform decisions made to protect confidentiality through data collection, linking, and dissemination.

ABSTRACT 1-2

OVERVIEW

Current Population Survey

Introduction

The Current Population Survey (CPS) is the source of the official Government statistics on employment and unemployment. The CPS has been conducted monthly for over 50 years. Currently, we interview about 54,000 households monthly, scientifically selected on the basis of area of residence to represent the nation as a whole, individual states, and other specified areas. Each household is interviewed once a month for four consecutive months one year, and again for the corresponding time period a year later. This technique enables us to obtain month-to-month and year-to-year comparisons at a reasonable cost while minimizing the inconvenience to any one household.

Although the main purpose of the survey is to collect information on the employment situation, a very important secondary purpose is to collect information on the demographic status of the population, information such as age, sex, race, marital status, educational attainment, and family structure. From time to time additional questions are included on such important subjects as health, education, income, and previous work experience. The statistics resulting from these questions serve to update similar information collected once every 10 years through the decennial census, and are used by government policymakers and legislators as important indicators of our nation's economic situation and for planning and evaluating many government programs.

The CPS provides current estimates of the economic status and activities of the population of the United States. Because it is not possible to develop one or two overall figures (such as the number of unemployed) that would adequately describe the labor market, the CPS is designed to provide a large amount of detailed and supplementary data. Such data are made available to meet a wide variety of needs on the part of users of labor market information.

Thus, the CPS is the only source of monthly estimates of total employment (both farm and nonfarm); nonfarm self-employed persons, domestics, and unpaid workers in nonfarm family enterprises; wage and salary employees; and, finally, estimates of total unemployment.

It provides the only available distribution of workers by the number of hours worked (as distinguished from aggregate or average hours for an industry), permitting separate analyses of part-time workers, workers on overtime, etc. The survey is also the only comprehensive current source of information on the occupation of workers and the industries in which they work. Information is available from the survey not only for persons currently in the labor force but also for those who are outside the labor force. The characteristics of such persons, whether married women with or without young children, disabled persons, students, older retired workers, etc., can be determined. Information on their current desire for work, their past work experience, and their intentions for job seeking are also available.

The Annual Social and Economic (ASEC) Supplement contains the basic monthly demographic and labor force data described above, plus additional data on work experience, income, noncash benefits, health insurance coverage, and migration.

CPS Sample

The CPS sample is based on the civilian noninstitutional population of the United States. The sample is located in approximately 826 sample areas comprising 1,328 counties and independent cities with coverage in every State and in the District of Columbia.

In all, some 70,000 housing units or other living quarters are assigned for interview each month; about 50,000 of them containing approximately 100,000 persons 15 years old and over are interviewed. Also included are

OVERVIEW 2-1

demographic data for approximately 22,000 children 0-14 years old and 400 Armed Forces members living with civilians either on or off base within these households. The remainder of the assigned housing units are found to be vacant, converted to nonresidential use, contain persons with residence elsewhere, or are not interviewed because the residents are not found at home after repeated calls, are temporarily absent, or are unavailable for other reasons. Approximately 20,000 noninterview households are present each month. The resulting file size is approximately 142,000 records.

Whether living on or off post, male and female members of the armed forces are included in the ASEC as long as at least one civilian adult lives in the same household. The armed forces members, however, are not asked the monthly labor force questions. In addition, the ASEC is supplemented with a sample of Hispanic households identified the previous November. This results in the addition of about 6,000 households (4,500 interviewed). The inclusion of the additional sample of Hispanic households began in 1976.

In 2002, the ASEC incorporated a significant sample expansion. The sample was expanded primarily to improve state estimates of children's health insurance coverage. This sample expansion, known as the CHIP sample, has three components: 1) Asking the ASEC Supplement questions of one-quarter of the February and April CPS samples, that is, of the households not also included in the March sample; 2) Interviewing selected sample households from the preceding August through November CPS sample during the February-April period using the ASEC Supplement; and 3) Increasing the monthly CPS sample in states with high sampling errors for uninsured children. This sample increase results in the addition of about 19,000 households to the ASEC. Adding together the regular sample (70,000), plus the Hispanic sample (6,000), plus the CHIP sample (19,000), we arrive at the total sample size for the ASEC of about 95,000 households.

A more precise explanation regarding the CPS sample design is provided in Technical Paper 77, *The Current Population Survey: Design and Methodology.*

For a more detailed discussion about the basic labor force data gathered on a monthly basis in the CPS survey, see the Bureau of Labor Statistics Report No. 463 and the Current Population Report P-23, No. 62, issued jointly by the Bureau of Labor Statistics and the

Bureau of the Census in October, 1976, Concepts and Methods Used In Labor Statistics Derived from the Current Population Survey.

Questionnaire

Questionnaire facsimiles of the 2023 ASEC Supplement are shown in Appendix E in this documentation.

Revisions to the ASEC Processing System

Starting in 2019

- Demographic edit changes
- Redesigned questions for income and health insurance coverage

File Structure

Historically, CPS ASEC data have always been provided only in a single ASCII file that included all three record types (household, family, and person). However, beginning in 2019, CSV and SAS files were also made available, with each being split into three separate files (one file for each of the three record types).

For the ASCII file, a description of the file structure follows below. It applies only to the ASCII file, not the CSV or SAS files.

There is a household record for each household or group quarters. The household record is followed by one of three possible structures:

- A. If the household contains related persons and is not a group quarters household:
 - The family record appears next followed by person records for members of the family who are not also members of a related subfamily. The person records would be ordered: family householder, spouse of family householder, children in the family, and other relatives of the family householder.

2-2 OVERVIEW

- 2. The above records may be followed by one or more related subfamily records, each related subfamily record being followed immediately by person records for members of that related subfamily. The person records would be ordered: reference person of the related subfamily, spouse of subfamily reference person, and children of subfamily reference person.
- 3. The above records may be followed by one or more unrelated subfamily records, each unrelated subfamily record being followed immediately by person records for members of that unrelated subfamily. The person records would be ordered: unrelated subfamily reference person, spouse of subfamily reference person, and children of subfamily reference person.
- 4. The above records may be followed by one or more persons living with nonrelatives family records, each to be followed by the person record for the unrelated individual it represents. (See Figure 1, page 2-4.)
- B. If the household contains a householder with no relatives and is not a group quarters household:
 - 1. The family record for the nonfamily householder is followed immediately by the person record for that nonfamily householder.
 - These records may be followed by one or more unrelated subfamily records, each unrelated subfamily record being followed immediately by the person records for members of that unrelated subfamily.
 - 3. These records may be followed by one or more family records for persons living with nonrelatives, each person living with nonrelatives family record being followed immediately by the person record for that person living with nonrelatives. (See Figure 2, page 2-5.)
- C. If the household is Group Quarters:

- 1. The family record for persons living with nonrelatives is followed immediately by the person record for that person living with nonrelatives.
- These records may be followed by one or more unrelated subfamily records, each unrelated subfamily record being followed immediately by the person records for members of that unrelated family.

Relationship of Current Population Survey Files to Publications

Each month, a significant amount of information about the labor force is published by the Bureau of Labor Statistics in the Employment and Earnings and Monthly Labor Review Reports.

As mentioned previously, the CPS also serves as a vehicle for supplemental inquiries on subjects other than employment which are periodically added to the questionnaire. From the basic and supplemental data, the Census Bureau issues four series of publications under the general title Current Population Reports:

P-20 Population Characteristics

P-23 Special Studies

P-60 Consumer Income

Of particular interest to users of the ASEC microdata file would be those reports based on information collected in the ASEC. These reports include the following titles:

P-60 Income in the United States: (Year)

P-60 Poverty in the United States: (Year)

P-60 Health Insurance Coverage in the United States: (Year)

All Current Population Reports are available online at https://www.census.gov/library/publications.html

OVERVIEW 2-5

Geographic Limitations

One set of estimates that can be produced from CPS microdata files should be treated with caution. These are estimates for individual metropolitan areas. Although estimates for the larger areas such as New York, Los Angeles, and so forth, should be fairly accurate and valid for a multitude of uses, estimates for the smaller metropolitan areas (those with populations under 500,000) should be used with caution because of the relatively large sampling variability associated with these estimates. For these areas, estimates comparing percent distributions and ratios will provide data with less sampling variability than estimates of levels will.

It should be kept in mind that the sample design and methods of weighting CPS data are geared towards producing estimates for the entire nation. Consequently, data for states are not as reliable as national data, and the file will lose some of its utility in certain applications. For further discussion of such considerations, the user should consult *The Current Population Survey: Design and Methodology* (Technical Paper 77, U.S. Bureau of the Census).

The nature of the work done by each individual investigator using the microdata file will determine to what extent his/her requirements for precision will allow using some of the smaller geographic areas identified on the file.

Weights

For all CPS data files a single weight is prepared and used to compute the monthly labor force status estimates. The difference in content of the CPS ASEC Supplement requires the presentation of additional weights: a supplement household weight, a supplement family weight, and a supplement person weight. In this section we briefly describe the construction and use of these weights. Chapter 2-3 of Technical paper 77, *The Current Population Survey: Design and Methodology* provides documentation of the weighting procedures for the CPS both with and without supplement questions.

The final weight, which is the product of several adjustments, is used to produce population estimates for the various items covered in the regular monthly CPS. This weight is constructed from the basic weight for each person, which represents the probability of selection for the survey. The basic weight is adjusted for special sampling situations and failure to obtain interviews from eligible households (noninterview adjustment). A two-stage ratio estimation procedure adjusts the sample population to the known distribution of the entire population. This two-stage ratio estimation process produces factors which are applied to the basic weight (after the special weighting and noninterview adjustments are made) and results in the final weight associated with each record. In summary, the final weight is the product of: (1) the basic weight, (2) adjustments for special weighting, (3) noninterview adjustment, (4) first stage ratio adjustment factor, and (5) second stage ratio adjustment factor. This final weight should be used when producing estimates from the basic CPS data.

Differences in the questionnaire, sample and data uses for the CPS ASEC Supplement result in the need for additional adjustment procedures to produce the ASEC Supplement weight. The sample for the CPS ASEC Supplement is expanded to include members of the Armed Forces who are living in civilian housing or with the family on a military base, as well as additional Hispanic households which are not included in the monthly labor force estimates, and children who live in low-income families and lack health insurance.

The expanded sample and the need to have married and cohabitating couples receive the same weight has resulted in a weighting system which produces the supplement weight. The supplement weight should be used for producing estimates from ASEC Supplement data.

Finally, household and family weights are the weights assigned from the householder or reference person after all adjustments have been made and should be used when tabulating estimates of families and households.

2-6 OVERVIEW

MATCHING OF CPS ASEC FILES

Matching ASEC Files Across Years

There are two basic limitations in linking the CPS ASEC files across years. First, only fifty percent of the sample is included in two consecutive years. Second, the residents within the eligible housing units may have changed or appeared as noninterview records in one or both years. The result is a matched sample of considerably less than the upper limit of fifty percent. The basic procedures and variables used to link two or more March CPS files are outlined below.

Sample Selection

The first step in matching year t with year t+1 is to select from year-t those housing units with a "month in sample" value of 1 through 4, and from year t+1 those units with a "month in sample" value of 5 through 8.

This will identify the sample subset eligible for matching. Within this subset, housing units in year t, month 1 will match only with units in year t+1, month 5, etc.

Matching Housing Units

Using one or more variables, it is possible to uniquely identify each housing unit in each sample rotation. However, because of changes in CPS procedures, the available information for matching housing units is not always identical. Below are the variables available for matching March CPS files.

Year	Ident	tifiers
1986 – 1993	HHIDNUM	
1994 – 2001*	H-MIS	H-IDNUM
2002 – 2004	H-IDNUM	H-HHNUM
2005 – 2018	H-IDNUM1	H-IDNUM2
2019 – present	H_IDNUM	

^{*}Matching between 1995 and 1996 is not possible because the March 1996 file is based entirely on the 1990 Census design sample.

Matching Person Records

If you wish to link not only the household information, but the person data as well, follow the procedure above, but add one or more variables to uniquely identify a person.

Year	Iden	tifiers
Before 1994	A_LINENO	Demographic Variables*
1994 – 2004	A_LINENO	

^{*}Prior to 1994, additional checks are needed to match person records across time. The specific variables used to match residents will vary according to the needs of the project, but it is more efficient to arrange the matching in a hierarchical sequence. For example, matching on sex, race and line number should precede matching on age or household relationship. The data user should carefully work through the possible changes in household structure that might result in an inappropriate rejection of a household.

For 2005 forward, one variable may be used by itself instead of adding it to the household identifiers. PERIDNUM is the only identifier needed for linking persons in files from 2005 onward.

Matching ASEC Household, Family, and Person Files for a Single Year

ID'ing Persons within a Household

To uniquely identify persons within a household, use PH_SEQ and PPPOS on the person file. Match PH_SEQ to H_SEQ on the household file, to link the persons to the household. PPPOS is the person id within each household.

For example, match PH_SEQ = 12345 to H_SEQ = 12345, and then use PPPOS, which will have values of 01, 02, ...16, to identify each person.

ID'ing Persons within a Family

To uniquely identify persons within a family, use PH_SEQ and PF_SEQ on the person file. Match PH_SEQ to FH_SEQ on the family file, to link the persons to the household. Then, match PF_SEQ on the Person file to FFPOS on the family file. FFPOS is the unique family id within each household.

For example, match PH_SEQ = 12345 to FH_SEQ = 12345, and then use PF_SEQ, which will have values of 01, 02, ...16. Each person with PF_SEQ= 01 will be in a unique family, each person with PF_SEQ= 02 will be in a unique family, and so on.

ID'ing Families within a Household

To uniquely identify families within a household, use FH_SEQ and FFPOS on the family file. Match FH_SEQ to H_SEQ on the household file, to link the families to the household. FFPOS is the unique family id within each household.

For example, match FH_SEQ = 12345 to H_SEQ = 12345, and then use FFPOS, which will have values of 01, 02, ...16, to uniquely identify the family.

Matching ASEC Files to Non-ASEC Files

Sometimes, there's a need to link an ASEC (or "March supplement") file to a non-ASEC file. Follow the matchkeys below to match households pertaining to the year the survey was conducted.

Matching Housing Units

For the ASEC file:

Year	Identifiers	
1994 – 2004	H_IDNUM	H_HHNUM
2005 – 2018	H_IDNUM1	H_IDNUM2
2019 – present	H_IDNUM*	

^{*}Concatenate HRHHID and HRHHID2 on the non-ASEC file to match to H_IDNUM on the ASEC file.

For the Non-ASEC File:

Month & Year		
Jan, 1994 – April 2004*	HRHHID	HUHHNUM
May 2004 – present	HRHHID	HRHHID2

^{*}For files ranging between April 1994 and June 1995, you must add the state code ('GESTCEN') to the list of identifiers to uniquely identify households. Due to the phase-in of the 1990 sample, a small number of households will share the same identifier unless adding this code.

Matching Person Records

If you desire to link not only the household information, but the person data as well, follow the procedure above, but add one or more variables to uniquely identify a person.

For non-March files, add PULINENO.

For March/ASEC files between 1994 and 2004, add A_LINENO. For 2005 forward, one variable may be used by itself instead of adding it to the household identifiers. PERIDNUM is the only identifier needed for linking persons in files from 2005 onward.

DIFFERENCES

<u>Differences between the 2023 and 2022 ASEC Files</u>

1. The variables covering broadband subsidies have new names for 2023. The new names remove any reference to pandemic era program names. These variables will stay the same going forward regardless of program name changes. More detail can be found on pages 6A-8 to 6A-10 of this document.

2022 Variable Name	Description	2023 Variable Name
HEBPD_YN	Broadband discount, y/n	HBBSUB_YN
HEBDP_MNTH	Broadband discount, months	HBBSUB_MNTH
I_HEBDPYN	Allocation flag for y/n	I_HBBSUBYN
I_HEBDPMNTH	Allocation flag for months	I_HBBSUBMNTH

2. The following variables have been removed from the file.

Variable Name	Description	Allocation Flag
HECTC_YN	Extended child tax credit, y/n	I_HECTCYN
HEIP_YN	Stimulus payment, y/n	I_HEIPYN
ADV_CTC	Advance child tax credit	
	Child and dependent care	
CDC_CRD	credit	
EIP_CRD	Economic Impact Payment 3	
	SPM Unit's Economic Impact	
SPM_EIP	Payments 1 and 2	

3. The following variable has been added to the file.

Variable Name	Description
STTAXREB	State Tax Rebate Amount

4. Values for variable PEINUSYR are updated every year to reflect the most recent year of the survey. In odd years (2017, 2019, etc.), only the largest value changes. In even years, the largest value also changes, but a new value is also appended. Please refer to the current year data dictionary for the latest values.

HOW TO USE THE DATA DICTIONARY

The data dictionary describes the contents and record layout of the public-use data file. It is split into three major sections, one for each record type (Household, Family, and Person). Within each section, variables are grouped by Topic and Subtopic.

Variables in the data dictionary are described by:

Descriptor	Description	
Variable	Variable name. Variable names are	
variable	unique throughout the entire data file.	
Longth	The length of a variable is given in	
Length	number of characters.	
Position Starting position (location) of the		
1 Ostilon	variable on the ascii data file.	
Range	Range of values the variable can hold.	
Description	Brief description of the variable.	
Brief description of each value the		
Values	variable can hold.	
Universe	Description of the variable's universe.	

For example, the variable HRECORD is the first variable found on the data dictionary, and appears like so:

Record Type: Household

Universe: All Households

Variable	Length	Position	Range
Topic: Re	cord Identi	fiers	
SubTop	ic: Record	Туре	
HRECORD		1 1	(1:1)
Record Type	e. Used to iden	tify records on as	cii file.
Values: 1 =	HOUSEHOLD	RECORD	

Accordingly, HRECORD is described as follows:

Length=1 means that HRECORD takes up only one character on the data file.

Position=1 means that HRECORD can always be found in the first column of the data file for all household records.

Range=(1:1) means that the values for HRECORD can range from 1 to 1. In other words, HRECORD will always equal 1. This can also be verified by looking at the values description.

Values: 1=Household Record. HRECORD=1 identifies the current record as a household record. This is convenient when using the ASCII file since it contains all three record types (household, family, and person). SAS tables are already separated by record type, so HRECORD is not as critical to use in this case.

The universe for HRECORD is all households, which means every household will have HRECORD=1. This agrees with the fact that HRECORD=1 identifies a record as a housing record.

How to Distinguish ASEC Supplement Variables from the Basic CPS Monthly Variables

With a few exceptions, Basic CPS monthly variables have a prefix and/or a suffix as follows:

Record Type	Prefix/Suffix	
Household	H_ or H1	
Family	Family records do not contain any Basic CPS monthly variables.	
Person	A_, AX, PE, PR, or PX	

Supplement variables are either all one string or have a suffix. For example, HFIN_YN is a supplement variable on the household record.

ASEC 2023 Public Use Data Dictionary

Record Type: Household

GLOSSARY

Subject Concepts

Age

Age classification is based on the age of the person at his/her last birthday. The adult universe (i.e., population of marriageable age) is comprised of persons 15 years old and over for the Annual Social and Economic (ASEC) Supplement data and for CPS labor force data.

Annuities

(See Income.)

Armed Forces

Armed Forces members enumerated in off-base housing or on base with their families are included on the CPS ASEC file, as long as at least one civilian adult lives in the same household. In addition to demographic and family data, supplemental data on income and work experience for Armed Forces members are included.

Base Weight

The constant weight assigned to the sample (inverse of the sampling fraction) which is adjusted to produce the final weight.

Civilian Labor Force

(See Labor Force.)

Class of Worker

This refers to the broad classification of the person's employer. On the ASEC file, these broad classifications for current jobs are private, government, self-employed, without pay, and never worked. Private and government workers are considered "wage and salary workers;" this classification scheme includes self-employed, incorporated persons in with "private" workers. For the longest job held last year, this class of worker scheme includes private; government by level/Federal, State, and local; self-employed incorporated, self-employed unincorporated or farm; and without pay. The wage and salary category for longest job held includes private, government (all levels), and self-employed incorporated.

Dividends

(See Income)

Duration of Unemployment

Duration of unemployment represents the length of time (through the current survey week) during which persons

classified as unemployed are continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since the termination of their most recent employment. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the present period of seeking work. Average duration is an arithmetic mean computed from a distribution by single weeks of unemployment.

Earners, Number of

The file includes all persons 15 years old and over in the household with \$1 or more in wages and salaries, or \$1 or more of a loss in net income from farm or nonfarm self-employment during the preceding year.

Earnings Weight

Each person record in month-in- sample 4 and 8 contains an earnings weight for current earnings.

Education

(See Level of School Completed.)

Employed

(See Labor Force.)

Energy Assistance Program

The Low-Income Home Energy Assistance Program provides financial assistance to qualified households to help them pay heating costs. The program is funded by the Federal government and administered by the States under broad guidelines. In some States a household may automatically be eligible for this program if the household receives (1) Aid to Families with Dependent Children, (2) Food Stamps, (3) Supplemental Security Income (SSI), and (4) certain Veterans' benefits.

The energy assistance questions were asked for the first time in 1982. In 2011, the question was revised to include assistance for cooling as well as heating expenses, and the reference period was expanded from:
(a) receipts since October 1 of the previous year; to (b) receipts for the entire previous calendar year.

Family

A family is a group of two persons or more (one of whom is the householder) residing together and related by birth, marriage, or adoption. All such persons

(including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family Household

A family household is a household maintained by a family (as defined above), and may include among the household members any unrelated persons (unrelated subfamily members and/or unrelated individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives (See definition of Family).

Family Weight

The weight on the family record is the March supplement weight of the householder or reference person. This weight on the primary family record should be used to tabulate the number of families.

Farm Self-Employment Net Income

The term is defined as net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, as a renter, or as a sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc.

Operation expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farm hands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for household living is not included as part of net income. Inventory changes are considered in determining net income only when they are accounted for in replies based on income tax returns or other official records which reflect inventory changes.

Final Weight

Used in tabulating monthly labor force items. This weight should be used when producing estimates from the basic CPS data. It should not be used to tabulate

ASEC supplement data.

Food Stamps

The Food Stamp Act of 1977 was enacted for the purpose of increasing the food purchasing power of eligible households through the use of coupons to purchase food. The Food and Nutrition Service of the U.S. Department of Agriculture (USDA) administers the Food Stamp Program through State and local welfare offices. The Food Stamp Program is the major national income support program which provides benefits to all low- income and low-resource households regardless of household characteristics (e.g., sex, age, disability, etc.). The questions on participation in the Food Stamp Program in the ASEC supplement were designed to identify households in which one or more of the current members received food stamps during the previous calendar year. Once a food stamp household was identified, a question was asked to determine the number of current household members covered by food stamps during the previous calendar year. Questions were also asked about the number of months food stamps were received during the previous calendar year and the total face value of all food stamps received during that period.

Full-Time Worker

Persons on full-time schedules include persons working 35 hours or more, persons who worked 1-34 hours for noneconomic reasons (e.g., illness) and usually work full-time, and persons "with a job but not at work" who usually work full-time.

Group Health Insurance Coverage

Civilian persons 15 years old and over who worked in the previous calendar year and who participated in group health insurance plans provided by the employer or union were asked whether part or all of the health insurance premiums were paid for by the union or employer and the extent of persons covered.

Additional questions were asked to determine if sample persons were covered by any other type of health insurance plan. These items are intended to measure retirees covered by continuing employer provided coverage and persons who purchased coverage on their own.

Group Quarters

Group quarters are noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing nine or more persons unrelated to the person in charge.

Head versus Householder

Beginning with the March 1980 CPS, the Census Bureau discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used.

Highest Grade of School Attended

(See Level of School Completed.)

Hispanic Origin

Persons of Hispanic origin in this file are determined on the basis of a question asking if the person is Spanish, Hispanic, or Latino. If the response is "yes," a follow-up question determines a specific ethnic origin, asking to select their (the person's) origin from a "flash card" listing. The flash-card selections are Mexican, Mexican-American, Chicano, Puerto Rican, Cuban, Cuban American, or some other Spanish, Hispanic, or Latino group.

Hours of Work

Hours of work statistics relate to the actual number of hours worked during the survey week. For example, a person who normally works 40 hours a week but who is off on the Veterans Day holiday is reported as working 32 hours even though he is paid for the holiday.

For persons working in more than one job, the figures relate to the number of hours worked in all jobs during the week. However, all the hours are credited to the major job.

Household

A household consists of all the persons who occupy a house, an apartment, or other group of rooms, or a room, which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters; that is, when the occupants do not live with any other person in the structure, and when there is direct access from the outside or through a common hall. The count of households excludes persons living in group quarters, such as military barracks and institutions. Inmates of institutions (mental hospitals, rest homes, correctional institutions, etc.) are not included in the survey.

Household Weight

Household weight is the March Supplement weight of the householder. This weight should be used to tabulate estimates of households.

Householder

The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder on the file is the "reference person" on the CPS-260 control card to whom the relationship of all other household members, if any, is recorded.

Householder with No Other Relatives in Household

A householder who has no relatives living in the household. This is the entry for a person living alone. Another example is the designated householder of an apartment shared by two or more unrelated individuals.

Householder with Other Relatives (Including Spouse) in **Household**

The person designated as householder if he/she has one or more relatives (including spouse) living in the household.

Income

For each person in the sample who is 15 years old and over, questions are asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security Income; (6) public assistance or welfare payments; (7) interest (on savings or bonds); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payment or unemployment and workmen's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

Although income statistics refer to receipts during the preceding year, the characteristics of the person such as age, labor force status, etc., and the composition of households refer to the time of the survey. The income of the household does not include amounts received by persons who are members of the household during all or part of the income year if these persons no longer reside with the household at the time of enumeration. On the other hand, household income includes amounts reported by persons who did not reside with the household during the income year but who were members of the household at the time of enumeration.

Data on consumer income collected in the CPS by the Census Bureau cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Also, money income does not reflect the fact that some households receive part of their income in the form of non-money transfers such as food stamps, health benefits, subsidized housing, and energy assistance; that many farm households receive non-money income in the form of rent free housing and goods produced and consumed on the farm; or that non-money income is received by some nonfarm residents that often takes the form of the use of business transportation and facilities, or full or partial contributions for retirement programs, medical and educational expenses, etc. These elements should be considered when com-paring income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to under report their income. From an analysis of independently derived income estimates, it has been determined that wages and salaries tend to be much better reported than such income types as public assistance, Social Security, and net income from interest, dividends, rents, etc.

Income Sources - Wages and Salary

Money wages or salary is defined as total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions are made for taxes, bonds, pensions, union dues, etc. Earnings for self-employed incorporated businesses are considered wage and salary.

Income Sources - Nonfarm Self-Employment

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes are considered in determining net income since replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes are not reported, net income figures exclusive of inventory changes are accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Income Sources - Farm Self-Employment

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, as a renter, or as a sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc.

Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farm hands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes are considered in determining net income only when they are accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise, inventory changes are not taken into account.

Income Sources - Social Security

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. "Medicare" reimbursements are not included.

Income Sources - Supplemental Security Income

Supplemental Security Income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old and over), (2) blind, or (3) disabled.

Income Sources - Public Assistance

Public assistance or welfare payments include public assistance payments such as Aid to Families with Dependent Children and general assistance.

Income Sources - Interest and Dividends

Interest, dividends, income from estates or trusts, net rental income or royalties include dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Income Sources - Unemployment Compensation

Worker's Compensation, and Veterans' Payments. Unemployment compensation, veterans' payments, or worker's compensation includes: (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Income Sources - Private and Government Pensions and Annuities

Many employers and unions have established pension program their employees so that upon retirement the employee will receive regular income to replace his/her earnings. Many of these programs also provide income to the employees if he/she becomes severely disabled, or to his/her survivors if the employee dies. Other types of retirement income include annuities and paid up life insurance policies. Some people purchase annuities which yield a set amount over a certain number of years. Other people may convert their paid up life insurance policy into an annuity after they retire.

Income Sources - Alimony and Child Support

Alimony is money received periodically from a former spouse following a divorce or separation. Child support is money received from a parent for the support of their children following a divorce or legal

separation. Money received from relatives, other than the parent, or friends is not considered as child support.

Receipts Not Counted As Income

Receipts from the following sources are not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person is engaged in the business of selling such property, in which case the net proceeds is counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances of insurance payments.

Industry, Occupation, and Class of Worker (I&O) - Current Job (Basic CPS data)

For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which they worked the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full-time or part-time) from which they were on layoff. The I&O questions are also asked of persons not in the labor force who are in the fourth and eighth months in sample and who have worked in the last five years. The occupation/industry classification system for the 2000 Census was used to code CPS data beginning with the January 2003 file. See Table 1 below; the occupation classifications underwent revisions in 2011, to make them consistent with Census 2010.

I&O - Longest Job (supplement data)

Longest job applies to the job held longest during the preceding year for persons who worked that year, without regard to their current employment status.

Table 1 – I&O Details for Current Job (Basic CPS) and Longest Job (ASEC Supplement)

Subject		Current Job (Basic CPS data)	Longest Job Last Year (ASEC data)		
		Variable Name			
	4-digit code	PEIOIND	INDUSTRY		
Industry	2-digit recode (detailed groups)	A_DTIND	WEIND		
	2-digit recode (major groups)	A_MJIND	WEMIND		
	4-digit code	PEIOOCC	OCCUP		
Occupation	2-digit recode (detailed groups)	A_DTOCC	POCCU2		
	2-digit recode (major groups)	A_MJOCC	WEMOCG		
Class of Worker	Class of Worker	A_CLSWKR	LJCW		

Job Seekers

All unemployed persons who made specific efforts to find a job sometime during the 4-week period preceding the survey week.

Keeping House

Persons are classified as keeping house if they engage in own housework. This is one of the "not in labor force" classifications employment status recode (ESR) = 4.

LFSR (Labor Force Status Recode)

This classification is available for each civilian 15 years old and over according to his/her responses to the monthly (basic) labor force items.

Labor Force

Persons are classified as in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" includes all civilians classified as employed or unemployed. The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

1. Labor Force – Employed

Employed persons comprise (1) all civilians who, during the survey week did any work at all as paid employees or in their own business or profession, or on their own farm, or who work 15 hours or more as unpaid workers on a farm or a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor- management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. These persons would have a Labor Force Status Recode (LFSR) of 1 or 2 respectively in character 145 of the person record which designates "at work" and "with a job, but not at work." Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they held the longest.

2. Labor Force – Unemployed

Unemployed persons are those civilians who, during the survey week, have no employment but are available for work, and (1) have engaged in any specific job seeking

activity within the past 4 weeks such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. These persons would have an LFSR code of 3 or 4 in the person record. The unemployed includes job leavers, job losers, new job entrants, and job reentrants.

2a. Unemployed - Job Leavers

Persons who quit or otherwise terminate their employment voluntarily and immediately begin looking for work.

2b. Unemployed - Job Losers

Persons whose employment ends involuntarily, who immediately begin looking for work, and those persons who are already /on layoff.

2c. Unemployed - New Job Entrants

Persons who never worked at a full-time job lasting two weeks or longer.

2d. Unemployed - Job Reentrants

Persons who previously worked at a full-time job lasting two weeks or longer but are out of the labor force prior to beginning to look for work.

3. Labor Force - Not in Labor Force

Included in this group are all persons in the civilian noninstitutional population who are neither employed nor unemployed. Information is collected on their desire for and availability to take a job at the time of the CPS interview, job search activity in the prior year, and reason for not looking in the 4-week period prior to the survey week. This group includes discouraged workers, defined as persons not in the labor force who want and are available for a job and who have looked for work sometime in the past 12 months (or since the end of their last job if they held one within the past 12 months), but who are not currently looking because they believe there are no jobs available or there are none for which they would qualify. Such persons have an LFSR code of 7 in the person record.

Finally, it should be noted that the unemployment rate represents the number of persons unemployed as a percent of the civilian labor force 16 years old and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percent of the civilian labor force 16 years old and over; the sum of the rates for the four groups thus equals the total unemployment rate.

Layoff

A person who is unemployed but expects to be called back to a specific job. If he/she expects to be called back within 30 days, it is considered a temporary layoff; otherwise, it is an indefinite layoff.

Level of School Completed/Degree Received

These data changed on the March 1992 file. A new question, "What is the highest level of school ... has completed or the highest degree ... has received? Replace the old "highest grade attended" and "year completed" questions. The new question provides more accurate data on the degree status of college students. Educational attainment applies only to progress in "regular" school. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system.

Looking for Work

A person who is trying to get work or trying to establish a business or profession.

March Supplement Weight

The March supplement weight is on all person records and is used to produce "supplement" estimates; that is, income, work experience, migration, and family characteristic estimates.

Marital Status

The marital status classification identifies four major categories: single (never married), married, widowed, and divorced. These terms refer to the marital status at the time of enumeration.

The category "married" is further divided into "married, civilian spouse present," "married, Armed Forces spouse present," "married, spouse absent," "married, Armed Forces spouse absent," and "separated." A person is classified as "married, spouse present" if the husband or wife is reported as a member of the household even though he or she may be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as "separated" included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily estranged from their spouses because of marital discord.

For the purpose of this file, the group "other marital status" includes "widowed and divorced," "separated," and "other married, spouse absent."

Medicare

The Medicare Program is designed to provide medical care for the aged and disabled. The Basic Hospital Insurance Plan (Part A) is designed to provide basic protection against hospital costs and related post-hospital services. This plan also covers many persons under 65 years old who receive Social Security or railroad retirement benefits based on long-term disability. Part A is financed jointly by employers and employees through Social Security payroll deductions. Qualified persons 65 years old and over who are not otherwise eligible for Part A benefits may pay premiums directly to obtain this coverage. The Medical Insurance Plan (Part B) is a voluntary plan which builds upon the hospital insurance protection provided by the basic plan. It provides insurance protection covering physicians' and surgeons' services and a variety of medical and other health services received either in hospitals or on an ambulatory basis. It is financed through monthly premium payments by each enrollee, and subsidized by Federal general revenue funds.

The Medicare question on the ASEC supplement attempted to identify all persons 15 years old and over who were "covered" by Medicare at any time during the previous calendar year. The term "covered" means enrolled in the Medicare Program. In order to be counted, the person did not necessarily have to receive medical care paid for by Medicare.

Medicaid

The Medicaid Program is designed to provide medical assistance to needy families with dependent children, and to aged, blind, or permanently and totally disabled

individuals whose incomes and resources are insufficient to meet the costs of necessary medical services. The program is administered by State agencies through grants from the Health Care Financing Administration of the Department of Health and Human Services. Funding for medical assistance payments consists of a combination of Federal, State, and in some cases, local funds.

Medicaid is a categorical program with complex eligibility rules which vary from State to State. There are two basic groups of eligible individuals: the categorically eligible and the medically needy. The major categorically eligible groups are all Aid to Families with Dependent Children (AFDC) recipients and most Supplemental Security Income (SSI) recipients. Other categorically eligible groups are (1) those who meet basic State cash assistance eligibility rules/aged, blind, disabled, needy single parents with children, and, in some States, needy unemployed parents with children, but who are not currently receiving money payments; and (2) needy persons who meet categorical eligibility standards but are institutionalized for medical reasons (e.g., low- income elderly persons in nursing homes). However, such institutionalized persons are not included in the CPS universe and, therefore, are not reflected in these statistics.

In roughly one-half of the States, coverage is extended to the medically needy/persons meeting categorical age, sex, or disability criteria, whose money incomes and assets exceed eligibility levels for cash assistance but are not sufficient to meet the cost of medical care. In such States, qualifying income and asset levels are usually above those set for cash assistance. Families with large medical expenses relative to their incomes and assets may also meet medically needy eligibility standards in these States.

The Medicaid question on the ASEC supplement attempted to identify all persons who were "covered" by Medicaid at any time during the previous calendar year. The term "covered" means enrolled in the Medicaid program, i.e., had a Medicaid medical assistance card, or incurred medical bills which were paid for by Medicaid. In order to be counted, the person did not have to receive medical care paid for by Medicaid.

After data collection and creation of an initial microdata file, further refinements were made to assign Medicaid coverage to children. In this procedure all children under 21 years old in families were assumed to be covered by Medicaid if either the householder or spouse reported being covered by Medicaid (this procedure was required mainly because the Medicaid coverage question was asked only for persons 15 years old and over). All adult AFDC recipients and their children, and SSI recipients living in States which legally require Medicaid coverage of all SSI recipients, were also assigned coverage.

Mobility Status

The population of the United States, 1 year old and over, is classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the ASEC supplement and the place of residence in March of the previous year. For ASEC years ending in 0 and 5, this information is also collected for 5-year mobility for person 5 years old and over.

Migration status (one-year) is derived from answers to questions about residence one year before the survey date and the geographic location of the respondent's current residence. One-year migration data are collected annually. Similarly, five-year migration status is based on residence five years ago compared to current residence. The first of three inquiries is: "Were/Was __living in this house one year ago?" If the answer was "No," the enumerator asked, "Where did ___ live one year ago?" In classification, three main categories distinguish nonmovers, movers within the United States, and movers from abroad.

Nonmovers are all persons who are living in the same house at the end of the period as at the beginning of the period. Movers within the United States are all persons who are living in a different house in the United States at the end of the period than at the beginning of the period. Movers from abroad include all persons whose place of residence is outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Month-In-Sample

The term is defined as the number of times a unit is interviewed. Each unit is interviewed eight times during the life of the sample.

Never Worked

A person who has never held a full-time civilian job lasting two consecutive weeks or more.

Nonfamily Householder

A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Nonfarm Self-employment Net Income

The term is defined as net money income (gross receipts minus expenses) from an individual's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered.

Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes are considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes; however, when values of inventory changes are not reported, net income figures exclusive of inventory changes are accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Nonworker

A person who did not do any work in the calendar year preceding the survey.

Nonrelative of Householder with No Own Relatives in Household

A nonrelative of the householder who has no relative(s) of his own in the household. This category includes such nonrelatives as a ward, a lodger, a servant, or a hired hand, who has no relatives of his own living with him in the household.

Nonrelative of Householder with Own Relatives (Including Spouse) in Household

Any household member who is not related to the householder but has relatives of his own in the household; for example, a lodger, his spouse, and their son.

Other Relative of Householder

Any relative of the householder other than his spouse, child (including natural, adopted, or step child), sibling, or parent; for example, grandson, daughter-in-law, etc.

Own Child

A child related by birth, marriage, or adoption to the family householder.

Part-Time, Economic Reasons

The item includes slack work, material shortages, repairs to plant or equipment, start or termination of job during the week, and inability to find full-time work. (See also Full-Time Worker.)

Part-Time Other Reasons

The item includes labor dispute, bad weather, own illness, vacation, demands of home housework, school, no desire for full-time work, and full-time worker only during peak season.

Part-Time Work

Persons who work between 1 and 34 hours are designated as working "part-time" in the current job held during the reference week. For the March supplement, a person is classified as having worked part-time during the preceding calendar year if he worked less than 35 hours per week in a majority of the weeks in which he worked during the year. Conversely, he is classified as having worked full-time if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Part-Year Work

Part-year work is classified as less than 50 weeks' work.

Pension Plan

The pension plan question on the ASEC supplement attempted to identify if pension plan coverage was available through an employer or union and if the employee was included. This information was collected for civilian persons 15 years old and over who worked during the previous calendar year.

Population Coverage

Population coverage includes the civilian population of the United States plus approximately one million members of the Armed Forces in the United States living off post or with their families on post in households with least one civilian adult but excludes all other members of the Armed Forces. This file excludes inmates of institutions. The labor force and work experience data are not collected for Armed Forces members.

Poverty

In this file, families and unrelated individuals are classified as being above or below the poverty level using a poverty index adopted by a Federal Interagency Committee in 1969 and slightly modified in 1981.

The modified index provides a range of income cutoffs or "poverty thresholds" adjusted to take into account family size, number of children, and age of the family householder or unrelated individual; prior to 1981, adjustments were also made on the basis of farmnonfarm residence and sex of the householder.

The impact of these revisions on the poverty estimates is minimal at the national level. The poverty cutoffs are updated every year to reflect changes in the Consumer Price Index. The average poverty threshold for a family of four was \$12,091 in 1985. A detailed explanation of the poverty definition is available at

https://www.census.gov/topics/incomepoverty/poverty/guidance/poverty-measures.html.

Public Assistance

(See Income.)

Public or Other Subsidized Housing

Participation in public housing is determined by two factors: program eligibility and the availability of housing. Income standards for initial and continuing occupancy vary by local housing authority, although the limits are constrained by Federal guidelines. Rental charges, which, in turn, define net benefits, are set by a Federal statute not to exceed 30 percent of net monthly money income. A recipient unit can either be a family of two or more related persons or an individual who is handicapped, elderly, or displaced by urban renewal or natural disaster.

There are some programs through which housing assistance is provided to low-income families and individuals living in public or privately owned dwellings. Two of the more common types of programs in which Federal, State, and local funds are used to subsidize private sector housing are rent supplement and interest reduction plans. Under a rent supplement plan the difference between the "fair market" rent and the rent charged to the tenant is paid to the owner by a government agency. Under an interest reduction program, the amount of interest paid on the mortgage by the owner is reduced so that subsequent savings can be passed along to low income tenants in the form of lower rent charges.

There were two questions dealing with public and low cost housing on the ASEC supplement questionnaire. The first question identifies residence in a housing unit owned by a public agency. The second question identifies beneficiaries who were not living in public housing projects, but who were paying lower rent due to a government subsidy. These questions differ from other questions covering noncash benefits in that they establish current recipiency status in March of the current year rather than recipiency status during the previous year.

Race

Beginning in January 2003, revisions to race categories took effect. Respondents were allowed to report more than one race, making selections from a "flash-card". The six race groups are: White, Black or African American, American Indian or Alaskan Native, Asian,

Native Hawaiian or Other Pacific Islander, and Other race. The last category includes any other race except the five mentioned. Because of these changes, data on race are not directly comparable to previous files. Use caution when interpreting changes in the racial composition of the U.S. over time.

Reentrants

Persons who previously worked at a full-time job lasting two weeks or longer but who are out of the labor force prior to beginning to look for work.

Related Children

Related children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to single (never married) children; however, "own children under 25" and "own children of any age," include all children regardless of marital status. The totals include nevermarried children living away from home in college dormitories.

Related Subfamily

A related subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including, the householder or spouse. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the number of families.

School, Major Activity

A person who spent most of his time during the survey week attending any kind of public or private school, including trade or vocational schools in which students receive no compensation in money or kind.

School Lunches

The National School Lunch Program is designed to assist States in providing a school lunch for all children at moderate cost. The National School Lunch Act of 1946 was further amended in 1970 to provide free and reduced-price school lunches for children of needy families. The program is administered by the Food and Nutrition Service of the U.S. Department of Agriculture (USDA) through State educational agencies or through regional USDA nutrition services for nonprofit private

schools. The program is funded by a combination of Federal funds and matching State funds.

All students eating lunches prepared at participating schools pay less than the total cost of the lunches. Some students pay the "full established" price for lunch (which itself is subsidized) while others pay a "reduced" price for lunch, and still others receive a "free" lunch. If the child's family income is at or below 130 percent of the federal poverty level, they are eligible for free lunches. Those who fall between 130 and 185 percent of the federal poverty level are eligible for reduced price lunches. The data in this file, however, do not distinguish between recipiency of free and reduced-price school lunches.

The questions on the ASEC supplement provide a very limited amount of data for the school lunch program. Questions concerning the school lunch program were designed to identify the number of members 5 to 18 years old in households who "usually" ate a hot lunch. This defined the universe of household members usually receiving this noncash benefit. This was followed by a question to identify the number of members receiving free or reduced price lunches.

Self-Employed

Self-employed persons are those who work for profit or fees in their own business, profession or trade, or operate a farm.

Secondary Individuals

A roomer, boarder, or resident employee with no relatives in the household, or a group quarters member who has no relatives living with him/her.

Stretches of Unemployment

A continuous stretch is one that is not interrupted by the person getting a job or leaving the labor market to go to school, to keep house, etc. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the period of seeking work.

Topcode

For confidentiality purposes, usual hourly earnings from the current job and earnings from the longest job are topcoded (i.e., cut off at a particular amount).

Earnings from the longest job are collected during enumeration up to any amount; however, the amount is topcoded on the public use file. (See page 5-1 for more

information.) From the supplement, total person's income is the sum of the amounts from the individual income types; total family income is the sum of the total person's income for each family member; total household income is the sum of the total income for each person in the household.

Total Money Income

The term is defined as the arithmetic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a household is the arithmetic sum of the amounts received by all income recipients in the household.

Unable to Work

A person is classified as unable to work because of longterm physical or mental illness, lasting six months or longer.

Unemployed

(See Labor Force.)

Unemployment Compensation

(See Income.)

Unpaid Family Workers

Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

Unrelated Individuals

Unrelated individuals are persons of any age (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be (1) a nonfamily householder living alone or with nonrelatives only, (2) a roomer, boarder, or resident employee with no relatives in the household, or (3) a group quarters member who has no relatives living with him/her. Thus, a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to anyone else in the housing unit, a maid living as a member of her employer's household but with no relatives in the household, and a resident staff member in a hospital living apart from any relatives are all examples of unrelated individuals.

Unrelated Subfamily

An unrelated subfamily is a family that does not include among its members the householder and relatives of the householder. Members of unrelated subfamilies may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of families. However, the number of such unrelated subfamilies is so small that persons in these unrelated subfamilies are included in the count of secondary individuals.

Veteran Status

If a person served at any time during the four most recent wartime periods, the codes for all periods of service are entered. A person can report up to 4 periods of service. The following codes are used:

- 0 Children under 15
- 1 September 2001 or later
- 2 August 1990 to August 2001
- 3 May 1975 to July 1990
- 4 Vietnam era (Aug 1964 to Apr 1975)
- 5 February 1955 to July 1964
- 6 Korean War (July 1950 to January 1955)
- 7 January 1947 to June 1950
- 8 World War II (Dec. 1941 to Dec. 1946)
- 9 November 1941 or earlier

Wage and Salary Workers

Wage and salary workers receive wages, salary, commission, tips, or pay in kind from a private employer or from a governmental unit. Also included are persons who are self-employed in an incorporated business. (See income.)

Weeks Worked in the Previous Year

Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Workers

(See Labor Force--Employed.)

Work Experience

Includes those persons who during the preceding calendar year did any work for pay or profit or worked without pay on a family- operated farm or business at any time during the year, on a part-time or full-time basis.

Year-Round Full-Time Worker

A year-round full- time worker is one who usually worked 35 hours or more per week for 50 weeks or more during the preceding calendar year.

Geographic Concepts

Geographic Division

An area composed of contiguous States, with Alaska and Hawaii also included in one of the divisions. (A State is one of the 51 major political units in the United States.) The nine geographic divisions have been largely unchanged for the presentation of summary statistics since the 1910 census.

Regions

There are four regions: Northeast, Midwest (formerly North Central).¹, West, and South. States and divisions within regions are presented in the tables below.

NORTHEAST REGION		
New England Division	Middle Atlantic Division	
Connecticut	New Jersey	
Maine	New York	
Massachusetts	Pennsylvania	
New Hampshire		
Rhode Island		
Vermont		

MIDWEST REGION		
East North Central Division	West North Central Division	
Illinois	Iowa	
Indiana	Kansas	
Michigan	Minnesota	
Ohio	Missouri	
Wisconsin	Nebraska	
	North Dakota	
	South Dakota	

MIDWEST REGION		
Mountain Division	Pacific Division	
Arizona	Alaska	
Colorado	California	
Idaho	Hawaii	
Montana	Oregon	
Nevada	Washington	
Utah		
Wyoming		
New Mexico		

GLOSSARY 7-14

_

¹ The Midwest Region was designated as the North Central Region until June 1964

SOUTH REGION			
East South Central Division West South Central Division South		South Atlantic Division	
Alabama	Arkansas	Delaware	
Kentucky	Louisiana	District of Columbia	
Mississippi	Oklahoma	Florida	
Tennessee	Texas	Georgia	
		Maryland	
		North Carolina	
		South Carolina	
		Virginia	
		West Virginia	

Improved Data Disclosure Avoidance Techniques Applied to the ASEC Microdata Files

IMPLEMENTATION OF ADDITIONAL DATA DISCLOSURE AVOIDANCE TECHNIQUES

Effective with the 2023 Annual Social and Economic Supplement (ASEC), additional data disclosure techniques are applied. As most users are aware, certain changes to the Current Population Survey (CPS) public use files (PUF) disclosure avoidance techniques were implemented to provide added confidentiality protection to these data. For an overview and background on these changes, please see https://www.census.gov/programs-surveys/cps/technical-documentation/user-notes/2023-cps-puf-changes.html.

This documentation provides additional detail about these changes and addresses considerations that data users may have when using the data.

The changes were phased in on a monthly basis. This means that for the 2023 ASEC file only cases that were Month-in-Sample (MIS) 1, 2, and 3 of the regular CPS sample reflect the changes. A small portion of the additional ASEC cases were also subject to changes. Overall, about 40 percent of the 2023 ASEC file were subject to the revisions. This phase-in continues for 16 months until April 2024, at which time all cases on the CPS microdata files will reflect the revisions listed below. This phase-in procedure allows users to continue to conduct longitudinal analyses without having a break in series.

As of January 2023, all MIS 1 cases are assigned Household Identification Numbers (H_IDNUM on the ASEC file; HRHHID1 on basic monthly CPS files) using an algorithm different than the one used in data collected previously. As with data files collected prior to January 2023, these numbers will remain constant over the time that a household remains in sample such that users will be able to use the same matching identification for the life of the case. H_IDNUM uniquely identifies a household on the ASEC data file. HRHHID1 along with HRHHID2 uniquely identify a household on the basic monthly files. This is for your information and the data user will not have to do anything different than in previous data use.

Section A: Geographic Synthesis

All Geography with population between 100,000 and 250,000 go through a geographic synthesis for privacy protection. Items for consideration include the following:

- 1. The 2010 Census population measures were used for identifying areas with a population between 100,000 and 249,999.
- 2. There is no revision to the current practice of geographic suppression of the data for populations under 100,000.
- 3. This synthesis applies to all CBSAs, identified principal cities, counties, and the component parts of the CBSA (principal city and balance portions). Additionally, CBSAs

that cross state boundaries are subject to synthesis separately for each state in which they occur. The following are eligible for synthesis:

- GTCBSA
- GTCBSAST
- GTCBSASZ
- GTCO
- GTINDVPC
- GTMETSTA
- GTCSA
- 4. No other data are synthesized by the swap.

Determining which cases are eligible for synthesis

The following are key things to consider when looking at data that may be eligible for geographic synthesis:

- While a specific geography may meet the population threshold for synthesis, not all cases in that geography are synthesized. Some are not synthesized and others are synthesized back into their original geography.
- Both nonmetropolitan and metropolitan areas are subject to synthesis.
- If a case is synthesized, all substate geographic codes are updated to reflect the new geography.
- All the substate codes for areas synthesized are revised as a group such that there are no records with missing or inconsistent codes.

For example, the Salisbury CBSA is contained within the states of Maryland and Delaware, with each state-specific portion of the CBSA having a population of 100,000 to 249,999. Thus, each state portion is subject to the synthesis. Conversely, the Wisconsin portion of the Minneapolis CBSA is subject to synthesis, but not the Minnesota portion since its population is over 250,000. Additionally, there are some CBSAs only partially in sample. For these areas, the population for the portion of the area in sample is used to determine whether it requires synthesis.

What follows below are examples based on user questions and comments that arose as the Census Bureau vetted these changes to the CPS PUF over the course of the last year. We hope that these examples help to understand the scope of these changes more clearly.

• Let's take Delaware as an example. There are 3 counties in the state, all of which are classified as metropolitan on the files. The county containing Wilmington (New Castle County, part of the Philadelphia CBSA in Delaware) has a population greater than 249,999 and is not subject to synthesis. The other 2 counties (Kent

County, in the Dover CBSA; and Sussex County, part of the Salisbury CBSA in Delaware), each have a population between 100,000 and 249,999 and are both subject to synthesis. For these areas, the CBSA code and other geographic codes change from Dover to Salisbury and vice versa for some cases while others keep the original CBSA codes.

- We only had one state, Vermont, where there was a single area requiring synthesis. In this case, we synthesized some of the nonmetropolitan areas along with synthesizing the Burlington CBSA.
- Another set of examples can be found in Arkansas. Here wedo not synthesize
 any cases in either the Little Rock or Fayetteville CBSAs. They retain their
 original codes. All the other areas in the state are subject to synthesis and either
 retain their original codes or the codes that were assigned by the synthesis
 process.

Analysis

Analysts at the Census Bureau reviewed 3 non-consecutive months of basic monthly public use data files to examine potential issues with the synthesized geographies. (As always, the Census Bureau urges caution when analyzing small sample sizes or subpopulations. For example, Census Bureau guidance recommends pooling three years of CPS ASEC to produce state-level estimates.)

Analysts examined demographics (age, marital status, sex, race, ethnicity, cohabitation status, household type) and key migration variables for differences in distributions between public use basic monthly files with and without geographic synthesis techniques applied. Additionally, analysts examined how geographic synthesis may affect the relationship between full-time employment status at the household level and household-level regressors, such as family income, race and ethnicity, education, average age, household tenure, employment status, disability, citizenship, marital status, having children, and veteran status. Analysts found no meaningful differences in distributions across the two sets of files, nor was there considerable evidence that the geographic synthesis changed the relationship between employment status and the examined variables.

One area of potential concern raised by external data users was the impact on the Supplemental Poverty Measure (SPM), which has geographically-adjusted thresholds. Census Bureau publications will continue to utilize the internal CPS ASEC files and therefore will be unaffected by changes in the CPS PUF. Nonetheless, estimates derived from the public use files were examined to see potential impacts on external data users. For the available subset of the 2022 CPS ASEC, SPM thresholds were re-calculated using synthesized geographies and used to re-estimate SPM rates overall and for detailed demographic subgroups (age, race and Hispanic origin, and CBSA status). The overall SPM rate was not statistically different when using geographically synthesized thresholds. However, significant differences were found with some demographic subgroups and regions, indicating the need for additional research once the geographic synthesis has been fully implemented. Differences in the distribution of people by

income-to-poverty thresholds did not significantly change when estimating supplemental poverty using the new synthesized geographies. This remained true when looking at subsamples by CBSA status.

As part of commitment to data users, the Census Bureau will review the impacts on the current production data and release occasional reports on any possible impacts on data quality. The bureau is constantly reviewing new methods for privacy protections and will refine the model should a better method be found that may lessen any impacts.

Section B – Changes to Earnings¹

Rounding and Topcoding of the Basic CPS Usual Weekly Earnings Data

The rounding and topcoding procedures did <u>not</u> begin phasing in for any of the cases on the 2023 ASEC file. These data will be 100 percent consistent with the same data on the 2022 ASEC file. This only applies to the Basic CPS earnings items, A_GRSWK and A_HRSPAY. All ASEC related earnings data from calendar year 2022 are not subject to these revisions.

For questions on technical issues involving these revisions, contact the CPS staff at: 301-763-3806 or email at DSD.CPS@census.gov

¹ All changes in this section will not appear until April 2023 when MIS 4 cases are first phased in.

CONTINUATION OF TOPCODING FOR INCOME AND RELATED VARIABLES

The 2023 ASEC public use data file continues the longstanding technique of swappping values between sample cases having incomes above a determined topcode value. This technique preserves the distribution of values above the topcode while maintaining adequate disclosure avoidance.

The technique used for swapping values is termed "rank proximity swapping". Once the topcode has been established, some persons with value above the topcode cutoff are sorted by those values from lowest to highest (values equal to the specified topcode are included in the universe of those requiring topcoding). Next, the values above the topcode are systematically swapped between sample persons. The swapping occurs within a bounded interval. This bounded interval assures that the values swapped are in "proximity" to each other, yet providing a sufficiently large group of persons from which the swap partners are selected. The Rank Proximity Swapping tables below show the topcode cutoff amount for the various sources.

The use of swapping techniques is accompanied by the procedure to round the swapped amounts.

All topcoded amounts included on the public use must be rounded to two significant digits (i.e. \$987,654=\$990,000; \$12,345=\$12,000; \$9,870=\$9,900; rounded values will never exceed the maximum value on the file, i.e. \$999,999=\$999,999).

Rank Proximity Swapping

APPENDIX A

INDUSTRY CLASSIFICATION

Industry Classification Codes for Detailed Industry (4 digit) (Starting January 2020)

These categories are aggregated into 52 detailed groups for Basic CPS, 23 detailed groups for ASEC, and 14 major groups used for both Basic CPS and ASEC (see pages 10-13 of this attachment).

Differences in Basic CPS and ASEC for Industry Recodes					
Range Basic CPS ASEC					
Detailed Industry Recode (-1:52) A_DTIND N/A					
Detailed Industry Recode	(0:23)	N/A	WEIND		
Major Industry Recodes* (0:14) A_MJIND WEMIND					
*WEMIND includes a value of 15 for 'Never worked' and A_MJIND uses -1 for Not in Universe instead of 0.					

These codes correspond to items PEIOIND and INDUSTRY. See Appendix G of this document for ascii file locations. The codes in the right hand column are the NAICS equivalent. The Census industry codes and NAICS codes are based on the 2017 North American Industry Classification System.

APPENDIX B

OCCUPATION CLASSIFICATION

(Beginning January 2020)

These categories are aggregated into 53 detailed groups for ASEC, 23 detailed groups for Basic CPS, and 11 major groups for both Basic CPs and ASEC (see pages 14-18 of this appendix).

Differences Basic CPS and ASEC for Occupation Recodes			
	Range	Basic CPS	ASEC
Detailed Occupation Recode	(0:53)	N/A	POCCU2
Detailed Occupation Recode*	(0:23)	A_DTOCC	WEMOCG
Major Occupation Recodes (0:11) A_MJOCC N/A			
*WEMOCG includes a value of 24 for 'Never worked'			

These codes correspond to items PEIOOCC and OCCUP. See Appendix G of this document for the ascii file locations. These codes are also applicable for any other CPS supplements that collect occupation data. The codes in the right hand column are the 2018 SOC equivalent.

9	Production occupations 1	7700-8990
10	Transportation and material moving occupations	9005-9760
11	Military specific occupations	9840

APPENDIX C

Weighted and Unweighted Counts

	Weighted	
Category	(in 1,000s)	Unweighted
Total Persons	330,632	146,133
Total Family Reference Persons	89,239	40,710
Total Units	131,661	88,978
Interviewed Units (HHds * GQ)	131,661	56,839
Households (Family and NonFamily Householders)	131,434	56,769
Total Family Records in Households	153,170	65,694
Total Families (HHldr, Related, and Unrelated)	89,222	40,705
Family Householders With No Related Subfamilies	80,325	36,440
Family Householders With 1+ Related Subfamilies	4,009	1,995
Unrelated Subfamily	392	188
Related Subfamily	4,496	2,082
Total Unrelated Individuals	63,948	24,989
Nonfamily Householder	47,099	18,334
Other Persons Living With No Relatives	16,849	6,655
Total Person in Households	330,361	146,051
Civilians 15 Years and Older	270,384	116,106
Civilians Less Than 15 Years Old	59,094	29,480
Armed Forces Members	884	465
Group Quarters	227	70
Total Family Records In Group Quarters	238	73
Total Persons	271	82
Civilians 15 Years and Older	263	79
Civilians Less Than 15 Years Old	7	3
Armed Forces Members	0	0
Noninterviewed Units	0	32,139
Type A	0	21,171
Type B/C	0	10,968

TABLE OF COUNTS C -1

APPENDIX D

Public Use Benchmarks

Due to confidentiality procedures (refer to Section 4 in the <u>ASEC technical documentation)</u>, including additional rounding added to protect respondent privacy in 2023, matching exact published estimates for income, official poverty, and the Supplemental Poverty Measure (SPM) may not be possible. However, published estimates and estimates generated from the public use file should be close in value. Using the restrictions and universes listed below will allow exact matches for the weighted counts of "All people," "All households," or "All families" as listed in the specified tables.

Income and Earnings:

To match published estimates of "All people" (in <u>PINC01</u>), "All households" (<u>HINC01</u>), and "All families" (<u>FINC01</u>), use the following universes and restrictions:

CPS ASEC Public Use Income Benchmarks (Income Year 2022)

Counts in thousands

Characteristic	Income Table Universe	Weight Used	Total Income Variable	Total (Weighted Count)	Mean Income (Published Dollar Value)	Mean Income (Public Use File Dollar Value)
All people ¹	a_age 15+	marsupwt	ptotval	271,531	\$59,430	\$59,427
All families	ftype = 1 (primary family)	fsup_wgt	ftotval	84,351	\$126,500	\$126,470
All households	hrhtype = 1-8 (excludes group quarters)	hsup_wgt	htotval	131,434	\$106,400	\$106,397

¹ Mean calculation excludes people without income (where PTOTVAL = 0). Total with income = 239,116. Source: U.S. Census Bureau, Current Population Survey 2023 Annual Social and Economic Supplement (CPS ASEC)

To match published worker earnings estimates from <u>PINCO5</u> for both sexes 15 years and over, use the following universes and restrictions:

CPS ASEC Public Use Income Benchmarks (Income Year 2022)

Counts in thousands

						With Earnings	
Characteristic	Income Table Universe	Weight Used	Total Earnings Variable	Total (Weighted Count)	Total with Earnings (Weighted Count)	Mean Income (Published dollar value)	Mean Income (Public use file dollar value)
All workers	a_age 15+	marsupwt	pearnval	271,531	170,875	\$66,010	\$66,010
Full-time, year-round workers ¹	wkswork>49 and hrswk>34	marsupwt	pearnval	121,368	121,355	\$80,320	\$80,324

¹ Full-time, year-round workers are those that worked more than 34 hours per week (HRSWK) for 50 or more weeks a year (WKSWORK).

Source: U.S. Census Bureau, Current Population Survey 2023 Annual Social and Economic Supplement (CPS ASEC)

Official Poverty:

Notes:

When merging together the person and family files, exclude observations where ftype = 3 (unrelated subfamilies) to prevent unrelated subfamilies from being double-counted in the estimates.

Unrelated individuals under the age of 15 are excluded from the official poverty universe. Because of this, there are 554,500 fewer children in the poverty universe than in the total civilian, noninstitutionalized population (these children are included in the universe for Supplemental Poverty Measure). Only including observations where pov_univ = 1 removes these children from the estimates and is necessary to replicate the published poverty estimates.

To match published estimates of "All people," "Primary families," "People in primary families," and "Related children under 18 in primary families" use the following universes and restrictions:

CPS ASEC Public Use Official Poverty Benchmarks

Counts in thousands

Characteristic	Poverty Table Universe	Weight Used	Total (Weighted Count)	Poverty Rate (Published Estimates)	Poverty Rate (Public Use Estimates)
All people	pov_univ = 1	marsupwt	330,077	11.5	11.5
Primary families	pov_univ = 1 and ftype = 1 and hhdrel = 1	marsupwt	84,351	8.8	8.8
People in primary families	pov_univ = 1 and ftype = 1	marsupwt	265,532	9.4	9.4
Related children under 18 in primary families	pov_univ = 1 and ftype = 1 and hhdrel in (3, 4, 6) and a_age It 18	marsupwt	71,238	14.8	14.8

Source: U.S. Census Bureau, Current Population Survey 2023 Annual Social and Economic Supplement (CPS ASEC)

Supplemental Poverty Measure

Notes: Unrelated individuals under the age of 15 are included in the SPM universe. These children are given the official poverty status of the household reference person. Therefore, the total count of "All people" will differ from official poverty above.

To match published estimates of "All people," use the following universes and restrictions:

Characteristic	SPM Universe	Weight Used	Total (Weighted Count)	Poverty Rate (Published Estimates)	Poverty Rate (Public Use Estimates)
All People	No restriction	marsupwt	330,632	12.4	12.4

Source: U.S. Census Bureau, Current Population Survey 2023 Annual Social and Economic Supplement (CPS ASEC)

Health Insurance Coverage Estimates

To match published estimates of "All people," use the following universes and restrictions:

CPS ASEC Public Use Health Insurance Coverage Benchmarks

Counts in thousands, rates in percent

Characteristic	Universe	Weight Used	Total (Weighted Count)	Uninsured Rate (Published Estimates)	Uninsured Rate (Public Use Estimates)
All People	cov≠0	marsupwt	329,970	7.9	7.9

Source: U.S. Census Bureau, Current Population Survey 2023 Annual Social and Economic Supplement (CPS ASEC)

1 BASIC CPS ITEMS

1.1 MOVER ITEMS

<u>HH32b</u>

Did (you/name of reference person) live at this address during the week of November 19, 2022?

- 1 Yes
- 2 No

HH32d

Did any of the following household members live here during the week of November 19, 2022?

- 1 Yes
- 2 No

1.2 FAMILY INCOME

S FAMINC

Which category represents the total combined income of all members of this FAMILY during the past 12 months?

This includes money from jobs, net income from business, farm or rent, pensions, dividends, interest, social security payments and any other money income received by members of this family who are 15 years of age or older?

1	Less than \$5,000	9	30,000 to 34,999
2	5,000 to 7,499	10	35,000 to 39,999
3	7,500 to 9,999	11	40,000 to 49,999
4	10,000 to 12,499	12	50,000 to 59,999
5	12,500 to 14,999	13	60,000 to 74,999
6	15,000 to 19,999	14	75,000 to 99,999
7	20,000 to 24,999	15	100,000 to 149,000
8	25,000 to 29,999	16	150,000 to more

1.3 INCDKR

Is the combined income of all members of this FAMILY during the past 12 months above or below \$75,000?

- 1 Above
- 2 Below

2 INTRODUCTION and WORK EXPERIENCE

Pr incom

?[F1] Importance of responding

Wording of introduction is optional.

The questions you just answered were about your job and economic status <u>last week</u>. The next set of questions ask about your job and economic status <u>last year</u>.

1 Enter 1 to Continue

Q29a

Did (name/you) work at a job or business at any time during 2022?

- 1 Yes
- 2 No

Q29b

Did (you/he/she) do any temporary, part-time, or seasonal work even for a few days during 2022?

- Include any Military Reserves or National Guard work.
- 1 Yes
- 2 No

Q30

Even though (name/you) did not work in 2022, did (you/he/she) spend any time trying to find a job or on layoff?

- 1 Yes
- 2 No

Q31

How many different weeks (was/were) (name/you) looking for work or on layoff from a job?

(01-52) Number of weeks

Q32

What was the main reason (you/he/she) did not work in 2022?

- Read categories if necessary
- 1 Ill, or disabled and unable to work
- 2 Retired
- 3 Taking care of home or family
- 4 Going to school
- 5 Could not find work
- 6 Doing something else

Q33

During 2022 in how many weeks did (name/you) work even for a few hours? Include paid vacation and sick leave as work.

- (01-52) Number of weeks
- Enter 97 if respondent can only answer in months

Q33mon

• Enter number of months worked (1-12)

Q33ver

Then (name/you) worked about (number) weeks. Is that correct?

- 1 Yes
- 2 No back to Q33 and obtain estimate

<u>Q35</u>

Did (name/you) lose any full weeks of work in 2022 because (you/he/she) (were/was) on layoff from a job or lost a job?

- Number of weeks worked in 2022: (number)
- 1 Yes
- 2 No
- 7 Mistake made in number of weeks worked last year Specify in Q35SP

Q35SP

* Specify mistake made in number of weeks worked last year

Q36

You said (name/you) worked about (number) (week/weeks). How many OF THE REMAINING (number) WEEKS (was/were) (you/he/she) looking for work or on layoff from a job?

• Enter 0 for none

Q37

Were the (number) weeks (name/you) (was/were) looking for work or on layoff all in one stretch?

- 1 Yes one stretch
- 2 No two stretches
- 3 No 3 or more stretches

Q38

What was the main reason (name/you) (was/were) not working or looking for work in the remaining weeks of 2022?

- Read list only if respondent is having difficulty answering the question
- 1 Ill, or disabled and unable to work 4
- 2 Taking care of home or family 5 No work available
- 3 Going to school

- 4 Retired
- 6 Other (Specify Q38sp)

Q38sp

• Enter verbatim response

Q39

For how many employers did (name/you) work in 2022? If more than one at the same time, only count it as one employer.

- 1 One
- 2 Two
- 3 Three or more

Q41

In the (one week/weeks) that (name/you) worked, how many hours did (you/he/she) (work that week?/usually work per week?)

Enter number of hours

Q43

During 2022, were there one or more weeks in which (name/you) worked less than 35 hours?

Exclude time off with pay because of holidays, vacation, days off, or sickness.

- 1 Yes
- 2 No

Q44

In the weeks that (name/you) worked, how many weeks did (name/you) work less than 35 hours in 2022?

Number of weeks worked in 2022: (number)
 (Number of weeks was reported in item Q33)

(1-52)

Q45

What was the main reason (name/you) worked less than 35 hours per week?

- Read list only if respondent is having difficulty answering the question
- 1 Could not find a full time job
- Wanted to work part time or only able to work part time
- 3 Slack work or material shortage
- 4 Other reason

Q46

What was (name's/your) longest job during 2022?

Was it:

```
(IO1NAM:) (name of employer)
(IO1IND:) (kind of business or industry)
```

```
(IO1OCC:) (occupation)
(IO1DT:) (duties)
```

- * CLASS OF WORKER: (PRIVATE/ FEDERAL GOVERNMENT/ STATE GOVERNMENT/ LOCAL GOVERNMENT/WORKING WITHOUT PAY IN FAMILY BUS./ SELF EMPLOYED--INCORPORATED/ SELF EMPLOYED--UNINCORPORATED)
- 1 Same as listed
- 2 Different job

Q47a

For whom did (name/you) work (?/at) (blank/(your/his/her) (blank/longest job during 2022?))

Name of Company, business, organization or other employer

(blank/*IO1NAM:) (entry)

The current employer is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter Armed Forces)

(blank/* Enter N for no work done at all during 2022)

Q47b

What kind of business or industry is this?

For example: TV and radio manufacturing, retail shoe store, farm

(blank/*IO1IND:) (entry)

The current business or industry type is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter NA)

Q47b1

Is this business or organization mainly manufacturing, retail trade, wholesale trade, or something else?

(blank/*IO1MFG:) (entry)

The current business or organization type is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter 4)

- 1 Manufacturing
- 2 Retail trade
- Wholesale trade
- 4 Something else

Q47c

What kind of work (was/were) (you/he/she) doing?

For example: Electrical Engineer, Stock Clerk, Typist

(blank/*IO1OCC:) (entry)

The current occupation is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter Armed Forces)

Q47d1

What were (your/his/her) most important activities or duties?

For example: Types, keeps account books, files, sells cars, operates printing press, finishes concrete.

(blank/*IO1DT:) (entry)

The current job description is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter NA)

Q47d2

What were (your/his/her) most important activities or duties?

For example: Types, keeps account books, files, sells cars, operates printing press, finishes concrete.

(blank/*IO1DT:) (entry)

The current job description is pre-filled in the Form Pane below. Press ENTER if Same)

(blank/* If longest job last year is military job, enter NA)

Q47E1

Ask Only If Necessary

(Were/Was) (you/he/she) employed by government, by a PRIVATE company, a nonprofit organization, or (was/were) (you/he/she) self-employed or working in a family business?

- 1 Government
- 2 Private for profit company
- Non profit organization including tax exempt and charitable organizations
- 4 Self employed
- 5 Working in family business

Q47E1a

Would that be the federal, state, or local government?

- 1 Federal
- 2 State
- 3 Local (county, city, township)

Q47E1b

Was this business incorporated?

- 1 Yes
- 2 No

Q47E1c

(Were/Was) (you/name) the owner of the business?

- 1 Yes
- 2 No

Q4788

Counting all locations where (this employer/(name/you)) (operates/operate), what is the total number of persons who work for ((name's/your) employer)/name/you))?

- Read categories if necessary
- 1 under 10
- 2 10-49
- 3 50-99
- 4 100-499
- 5 500-999
- 6 1,000+

3 EARNED INCOME

The Earnings and Income question series include range follow-up questions presented anytime a respondent doesn't know or refuses to provide an exact dollar amount for a source they (or someone in the household) indicates as having received. Follow-up

questions allow respondents that do not feel comfortable giving exact dollar values to report an income range. There are three sets of categories used for the income range follow-up questions: high-range, mid-range, and low-range. The income range used in the follow-up range questions depends on the source of the income. See Attachment A to this items booklet for the three levels of income range follow-up questions. See Attachment B for a table that displays the income source and the range level used for the follow-up questions.

Q48aa

How much did (name/you) earn from this employer before taxes and other deductions during 2022?

- Enter dollar amount
- Enter 0 for none

Q48aarn1 Ask only if the respondent "Doesn't know" or 'Refused" Q48aa

Could you tell me if (name/you) earned

less than \$45,000 between \$45,000 and \$60,000 or over \$60,000

for the TOTAL yearly amount from this employer before taxes and other deductions during 2022?

- 1 Less than \$45,000
- 2 Between \$45,000 and \$60,000
- 3 Over \$60,000

Q48aarn2

Did (name/you) earn

less than \$15,000 between \$15,000 and \$30,000 or over \$30,000

from this employer during 2022?

- 1 Less than \$15,000
- 2 Between \$15,000 and \$30,000
- 3 Over \$30,000

Q48aap

Read if necessary

Is this a weekly, every other week, twice a month, monthly, or yearly amount?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 7 Yearly

Q48a1

For how many (weekly/every other week/twice a month/monthly) pay periods did (name/you) earn (fill from Q48aa) from this employer in 2022?

***** (1-12/1-24/1-26/1-52)

Q48aC2

- Do not read to the respondent.
- * The annual rate appears out of range. The total annual earnings entered is (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q48aV

According to my calculations (name/you) earned (total) altogether from this employer in 2022 before deductions. Does that sound about right?

- 1 Yes
- 2 No

Q48a2

What is your best estimate of (name's/your) correct total amount of earnings from this employer during 2022 before deductions?

• PREVIOUS ENTRIES: Q48aa: (amount)

Q48aap: (periodicity)

Q48a1: (number of pay periods)

Enter dollar amount

Q48a3

Does this amount include all tips, bonuses, overtime pay, or commissions

(name/you) may have received from this employer in 2022?

- 1 Yes
- 2 No

Q48aad

How much did (name/you) earn in tips, bonuses, overtime pay, or commissions from this employer in 2022?

Enter dollar amount

Q48aadrn1 Ask only if the respondent "Doesn't know" or "Refused" Q48aad

Could you tell me if (name/you) earned

less than \$1,000 between \$1,000 and \$3,000 or over \$3,000

in tips, bonuses, overtime pay, or commissions from this employer during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$3,000
- 3 Over \$3,000

Q48aadrn2

Did (name/you) earn

less than \$100 between \$100 and \$500 or over \$500

in tips, bonuses, overtime pay, or commissions from this employer during 2022?

- 1 Less than \$100
- 2 Between \$100 and \$500
- 3 Over \$500

Q48b

What were (name's/your) net earnings from this business/farm after expenses during 2022?

- If response is "Broke Even" then enter 1
- If response is "none" or if respondent does not own a business or farm, then enter "0"

- If response is "Lost Money" press Enter
- * Enter dollar amount

Q48b char

• Enter "L" for Lost Money

Q48BL

- Enter amount of money lost in 2022
- Enter annual amount only

Q48brn1 Ask only if the respondent "Doesn't know" or "Refused" Q48b.

Could you please tell me if (name/you) earned

less than \$45,000 between \$45,000 and \$60,000 or over \$60,000

for the TOTAL yearly amount from this business/farm after expenses during 2022?

- 1 Less than \$45,000
- 2 Between \$45,000 and \$60,000
- 3 Over \$60,000

Q48brn2

Did (name/you) earn

less than \$15,000 between \$15,000 and \$30,000 or over \$30,000

from this business/farm after expenses during 2022?

- 1 Less than \$15,000
- 2 Between \$15,000 and \$30,000
- 3 Over \$30,000

Q48bp

Is this a weekly, every other week, twice a month, monthly, quarterly, or yearly amount?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 5 Quarterly
- 7 Yearly

Q48B1A

- Do not read to the respondent.
- * The annual rate appears out of range. The total annual business loss entered is (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q48B1B

- Do not read to the respondent.
- * The annual rate appears out of range. The total annual business income entered is (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q48b2

What is your best estimate of (name's/your) ANNUAL net earnings from this business/farm after expenses in 2022?

- * PREVIOUS ENTRIES: Q48b : (amount)
 Q48bp: (periodicity)
- Enter dollar amount

- 2 No

Q97Br

Read only if necessary

Who had such a retirement account?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

Q97Cr

What type of retirement account did (you/ NAME) have? Did (you/he/she) have...

- * READ EACH CATEGORY
- Enter all that apply, separate using the space bar or a comma.
 - 1. 401(k)
 - 2. 403(b)
 - 3. Roth IRA
 - 4. Regular IRA
- 5. KEOGH plan ("KEE-OH")
- 6. SEP plan (Simplified Employee Pension)
- 7. another type of retirement account

<u>Q97Dr</u>

What was the source of (name's/your) retirement income?

- Enter other source of retirement income
- Enter "Other Retirement" if the answer is "Don't Know"

Q98Ar(1-7)

Did (you/NAME) withdraw any money or receive a distribution from (your/his/her) [ACCOUNT TYPE_ FILL IN FROM Q97CR or Q97DR] in 2022 (, including any distributions (you/he/she) may have been required to take)?

- 1 Yes
- 2 No

4.14 INCOME-EARNING ACCOUNTS OUTSIDE OF RETIREMENT (Source)

Q99ARa

Now I will ask about assets that may have paid interest or dividends in 2022 outside of the retirement accounts.

At any time during 2022, did (you/anyone in this household):

Have money in an interest-earning checking account?

- 1 Yes
- 2 No

Q99Ba

Ask only if necessary

Which members of this household ages 15 and over had an interest-earning checking account?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

Q99ARb

At any time during 2022, did (you/anyone in this household):

Have money in a savings account?

- 1 Yes
- 2 No

Q99Bb

Ask only if necessary

Which members of this household ages 15 and over had savings accounts?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

Q99ARc

At any time during 2022, did (you/anyone in this household):

Have money in a money market fund?

- 1 Yes
- 2 No

Q99Bc

Ask only if necessary

Which members of this household ages 15 and over had a money market fund?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- * Probe: Anyone else?

Q99ARd

At any time during 2022, did (you/anyone in this household):

Have money in CDs (certificates of deposit)?

- 1 Yes
- 2 No

Q99Bd

Ask only if necessary

Which members of this household ages 15 and over had CDs (certificates of deposit)?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

Q99ARe

At any time during 2022, did (you/anyone in this household):

Have money in savings bonds?

- 1 Yes
- 2 No

Q99Be

Ask only if necessary

Which members of this household ages 15 and over had savings bonds?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

Q99ARf

At any time during 2022, did (you/anyone in this household):

Have money in shares of stock in corporations or mutual funds?

- 1 Yes
- 2 No

Q99Bf

Ask only if necessary

Which members of this household ages 15 and over had shares of stock in corporations or mutual funds?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

Q99ARg

At any time during 2022, did (you/anyone in this household):

Have money in any other savings or investments that pay interest or dividends?

- 1 Yes
- 2 No

Q99Bg

Ask only if necessary

Which members of this household ages 15 and over had any other savings or investments that paid interest or dividends?

- Include each person in cases of joint accounts or ownership
- Enter all that apply, separate using the space bar or a comma
- Probe: Anyone else?

CAPGDIS

Did (you/NAME) receive any capital gains from (your/his/her) shares of stocks or mutual funds in 2022?

- 1 Yes
- 2 No

Q99BR

What was the source of (name's/your) savings or investments that pay interest or dividends?

• Enter other source of interest or dividend income

4.15 PROPERTY INCOME (Source)

Q65A1

During 2022 did (you/ anyone in this household):

Own any land, business property, apartments, or houses which were rented to others?

- 1 Yes
- 2 No

Q65A2

At any time during 2022 did (you/ anyone in this household): Receive income from royalties or from roomers or boarders? (exclude amounts paid by relatives)

- 1 Yes
- 2 No

Q65A3

At any time during 2022 did (you/ anyone in this household):

Receive income from estates or trusts? (exclude estates or trusts already reported)

- 1 Yes
- 2 No

Q65b

* Ask only if necessary

Who received this (income/rent)?

- (Amount previously reported in Q48b was (amount))
- Include each in cases of joint ownership. For self-employed persons, determine if income was already included
- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

4.16 EDUCATION ASSISTANCE (Source)

Q66a

During 2022 did (you/anyone in this household) attend school beyond the high school level including a college, university, or other schools?

(include vocational, business, or trade schools)

- 1 Yes
- 2 No

Q66b

Did (you/ anyone in this household) receive any educational assistance for tuition, fees, books, or living expenses during 2022?

- Exclude loans, assistance from household members, and VA educational benefits
 - 1 Yes
 - 2 No

Q66c

Ask only if necessary

Which member received assistance?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

Q66d

What type of assistance did (name/you) receive?

- Exclude assistance from household members
- Enter all that apply, separate using the space bar or a comma.
- Probe: Any other assistance?
- 2 Pell Grant
- 3 Assistance from a welfare or social service office
- 4 Some other government assistance
- 5 Scholarships, grants, etc.
- 6 Other assistance (employers, friends, etc.)

4.17 CHILD SUPPORT (Source)

Q70a

During 2022 did (you/anyone in this household) receive: Any child support payments?

- 1 Yes
- 2 No

Q70b

Read only if necessary

Who received these payments?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

4.18 REGULAR FINANCIAL ASSISTANCE (Source)

Q72a

(Any other/Any) regular financial assistance from friends or relatives not living in this household?

- Do not include loans
- 1 Yes

2 No

Q72b

Read only if necessary

Who received this assistance?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

4.19 OTHER MONEY INCOME (Source)

Q73A1R

During 2022 did (you/ anyone in this household) receive cash income not already covered such as income from:

foster child care, alimony, jury duty, armed forces reserves, severance pay, hobbies, or any other source?

- Do NOT include federal stimulus payments due to the Coronavirus pandemic.
- 1 Yes
- 2 No

Q73A1b

* Ask only if necessary

Who received this income?

- * Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone Else?

Q73A1Rc1

What was the source of this income?

- Asking about: (name/you Current respondent)
- Do not read answer list to respondent
 - 1 Alaska Permanent Fund Dividend
 - 2 Other sources or don't know Specify

Q73A1Rc

Specify other source of income

* Asking about: (name/you – Current respondent)

5 INCOME AMOUNTS

AMTINTRO

Now I will ask you about the amount of income you (and others in this household) received from various sources in 2022.

5.1 UNEMPLOYMENT AND WORKER'S COMPENSATION (Amounts)

Q51A1p

What is the easiest way for you to tell us (name's/your) State or Federal unemployment compensation; weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week (bi-weekly)
- 3 Twice a month
- 4 Monthly
- 7 Yearly

Q51A11

How much did (name/you) receive (weekly/every other week/ twice a month/monthly) in State or Federal unemployment compensation during 2022?

• Do NOT include federal stimulus payments due to the Coronavirus pandemic.

Enter (dol	lar	amou	nt

Q51A11r1

Could you please tell me if (name/you) received:

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

in State or Federal unemployment compensation during 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

Q51A11r2

Did (name/you) receive:

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in State or Federal unemployment compensation during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

Q51A1C

Do not read to the respondent.

The annual rate appears out of range. The total State or Federal unemployment compensation received in 2022 was (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q51A12

How many (weekly/every other week/ twice a month/monthly) payments did (name/you) receive from State or Federal unemployment compensation during 2022?

(1-12/1-24/1-26/1-52)

Q51A13

According to my calculations (name/you) received (total) altogether from State or Federal unemployment compensation during 2022. Does that sound about right?

- 1 Yes
- 2 No

Q51A14

What is your best estimate of the correct total amount (name/you) received from State or Federal unemployment compensation during 2022?

PREVIOUS ENTRIES: Q51A11: (amount)

Q51A1p: (periodicity)

Q51A12: (number of pay periods)

Enter dollar amount

Q51A2p

What is the easiest way for you to tell us (name's/your) Supplemental Unemployment Benefits; weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week (bi-weekly)
- 3 Twice a month
- 4 Monthly
- 7 Yearly

Q51A21

How much did (name/you) receive (weekly/every other week/twice a month/monthly) in Supplemental Unemployment Benefits during 2022?

• Do NOT include federal stimulus payments due to the Coronavirus pandemic.

Enter dollar amount

Q51A21r1

Could you please tell me if (name/you) received

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

in Supplemental Unemployment Benefits during 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

Q51A21r2

Did (name/you) receive

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in Supplemental Unemployment Benefits during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

Q51A2C

Do not read to the respondent.

The annual rate appears out of range. The total Supplemental Unemployment Benefits received in 2022 was (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q51A22

How many (weekly/every other week/twice a month/ monthly) payments did (name/you) receive from Supplemental Unemployment Benefits during 2022?

```
(1-12/1-24/1-26/1-52)
```

Q51A23

According to my calculations (name/you) received (total) altogether from Supplemental Unemployment Benefits during 2022. Does that sound about right?

- 1 Yes
- 2 No

Q51A24

What is your best estimate of the correct total amount (name/you) received from Supplemental Unemployment Benefits during 2022?

```
PREVIOUS ENTRIES: Q51A21: (amount)

```

Q51A22: (number of pay periods)

Enter dollar amount

Q51A3p

What is the easiest way for you to tell us (name's/your) Union Unemployment or Strike Benefits; weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week (bi-weekly)
- 3 Twice a month
- 4 Monthly

7 Yearly

Q51A31

How much did (name/you) receive (weekly/every other week/ twice a month/monthly) in Union Unemployment or Strike Benefits during 2022?

• Do NOT include federal stimulus payments due to the Coronavirus pandemic.

Enter dollar amount

Q51A31r1

Could you please tell me if (name/you) received

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

in Union Unemployment or Strike Benefits during 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

Q51A31r2

Did (name/you) receive

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in Union Unemployment or Strike Benefits during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

C251A3

Do not read to the respondent.

The annual rate appears out of range. The total Union Unemployment or Strike Benefits received in 2022 was (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q51A32

How many (weekly/every other week/ twice a month/ monthly) payments did (name/you) receive from Union Unemployment or Strike Benefits during 2022?

(1-12/1-24/1-26/1-52)

Q51A33

According to my calculations (name/you) received (total) altogether from Union Unemployment or Strike Benefits during 2022. Does that sound about right?

- 1 Yes
- 2 No

Q51A34

What is your best estimate of the correct total amount (name/you) received from Union Unemployment or Strike Benefits during 2022?

PREVIOUS ENTRIES: Q51A31: (amount)

Q51A3p: (periodicity)

Q51A32: (number of pay periods)

Enter dollar amount

Q52cp

What is the easiest way for you to tell us (your/name's) Worker's Compensation: weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 7 Yearly

Q52c1

How much did (name/you) receive (weekly/every other week/twice a month/monthly) in Worker's Compensation during 2022?

• Do NOT include federal stimulus payments due to the Coronavirus pandemic.

Enter dollar amount

Q52cr1

Could you please tell me if (name/you) received

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

in Worker's Compensation during 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

Q52cr2

Did (name/you) receive

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in Worker's Compensation during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

Q52cC2

Do not read to the respondent.

The annual rate appears out of range. The total worker's compensation received in 2022 was (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q52c2

How many (weekly/every other week/twice a month/monthly) payments did (name/you) receive from Worker's Compensation during 2022?

(1-12/1-24/1-26/1-52)

Q52c3

Then (name/you) received (total) altogether from Worker's Compensation during 2022. Does that sound about right?

- 1 Yes
- 2 No

Q52c4

What is your best estimate of the correct total amount (name/you) received from Worker's Compensation during 2022?

PREVIOUS ENTRIES: Q52c1: (amount)

Q52cp: (periodicity)

Q52c2: (number of pay periods)

Enter dollar amount

5.2 SOCIAL SECURITY (Amounts)

Q56dp

What is the easiest way for you to tell us (name's/your) Social Security payment; monthly, quarterly, or yearly?

- 4 Monthly
- 5 Quarterly
- 7 Yearly

Q56d

How much did (name/you) receive (monthly/quarterly) in Social Security payments in 2022?

- Enter dollar amount
- (If already included in amount reported for another household member, press Enter)

Q56d Char

Enter <A> for Already included

Q56drn1

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

for the TOTAL amount (you/name) received in Social Security payments in 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

Q56drn2

Did (name/you) receive

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in Social Security payments in 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

Q56d2

For how many (months/quarters) did (name/you) receive Social Security in 2022?

(1-4; 1-12)

Q56d3

Is this \$(amount from Q56d/amount from Q56d1) before or after any monthly Medicare deduction?

- 1 After Deduction
- 2 Before Deduction

Q56md

If Q56d3 = 1 then ask:

How much were (name's/your) monthly Medicare deductions?

If Q56d3 = 2 then ask:

How much were (name's/your) monthly payments for Medicare?

Include Medicare Advantage, Part B, and Part D premiums.

Q56dC2

Do not read to the respondent.

The annual rate appears out of range. The total Social Security received in 2022 was (amount). Is this a correct entry? If Yes, enter "S" to Suppress. If No, press enter and correct entry.

Q56d5

According to my calculations (name/you) received \$(total) altogether from Social Security in 2022. Does that sound about right?

1 Yes

2 No

Q56d6

What is your best estimate of the correct amount (name/you) received in Social Security during 2022?

PREVIOUS ENTRIES: Q56d: (amount)

5.13 ANNUITIES (Amounts)

ANNNEW1

What is the easiest way for you to tell us (name/your) annuity income; weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 7 Yearly

ANNNEW2

How much did (name/you) receive (weekly/every other week/twice a month/monthly) in annuities in 2022?

• Enter dollar amount

ANNNEWrn1

Could you tell me if (name/you) received

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

in annuity payments in 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

ANNNEWrn2

Did (name/you) receive

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

in annuity payments in 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

ANNNEW3

How many (weekly/every other week/ twice a month/monthly) payments did (name/you) receive in 2022?

* (1-12; 1-52)

ANNNEW4

According to my calculations (name/you) received \$(total) dollars altogether from annuities in 2022. Does that sound about right?

- 1 Yes
- 2 No

ANNNEW5

What is your best estimate of the correct amount (name/you) received in annuities in 2022?

• Enter dollar amount

5.14 WITHDRAWALS/DISTRIBUTIONS FROM RETIREMENT PLAN (Amounts)

DISTNEW1

What is the easiest way for you to tell us the amount of money withdrawn or distributed from (name's/your) (1st account type fill-in from Q97CR or Q97DR) in 2022: monthly, quarterly, every 6 months, or yearly?

- 4 Monthly
- 5 Quarterly
- 6 Every 6 months
- 7 Yearly

DISTNEW2

How much was (name's/your) withdrawal or distribution (weekly/every other week/twice a month/ monthly) from (1st account type fill-in from Q97CR or Q97DR) in 2022?

Enter dollar amount

DISTNEW3

How many (monthly/quarterly) withdrawals did (name/you) make or distributions did (name/you) receive in 2022 from the (1st account type fill-in from Q97CR or Q97DR)?

◆ Valid entries are 1-12 if monthly; 1-4 if quarterly; 1-2 if every six months

DISTNEWrn1

Could you please tell me if (name's/your) withdrawal or distribution was

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

from (your/his/her) (1st account type fill-in from Q97CR or Q97DR) in 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

DISTNEWrn2

Was (name's/your) withdrawal or distribution

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

from (your/his/her) (1st account type fill-in from Q97CR or Q97DR) in 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

DISTNEW4

According to my calculations (name/you) withdrew or received a distribution of \$(total) altogether from the (1st account type fill-in from Q97CR or Q97DR) in 2022. Does that sound about right?

- 1 Yes
- 2 No

DISTNEW5

What is your best estimate of the correct amount (name/you) withdrew or the distribution received from the (1st account type fill-in from Q97CR or Q97DR) during 2022?

• Enter dollar amount

ROLLA

Did (you/name) re-invest or "roll over" any of the money into an IRA or some other kind of retirement plan?

1 Yes 2 No

ROLLAMTA

How much did (you/name) re-invest or "roll over" into an IRA or some other kind of retirement plan in 2022?

- Enter dollar amount
- Dollar amount should not exceed amount of withdrawals reported.
- Amount of withdrawals reported: \$(amount)

ROLLB

(Do/Does) (you/name) plan to re-invest or roll over any of the money?

1 Yes

2 No

ROLLAMTB

How much (do/does) (you/name) plan to re-invest or "roll over" into an IRA or some other kind of retirement plan?

- Enter dollar amount
- Dollar amount should not exceed amount of withdrawals reported.
- Amount of withdrawals reported: \$(amount)

DISTNEW6

What is the easiest way for you to tell us the amount of money withdrawn or distributed from (name's/your) (2nd account type fill-in from Q97CR or Q97DR) in 2022: monthly, quarterly, every 6 months, or yearly?

- 4 Monthly
- 5 Quarterly
- 6 Every 6 months
- 7 Yearly

DISTNEW7

How much was (name's/your) withdrawal or distribution (weekly/every other week/twice a month/ monthly) from (your/his/her) (2nd account type fill-in from Q97CR or Q97DR) in 2022?

Enter dollar amount

DISTNEW8

How many (monthly/quarterly) withdrawals did (name/you) make or distributions did (name/you) receive in 2022 from the (2nd account type fill-in from Q97CR or Q97DR)?

(1-12), (1-4), (1-2)

DISTNEWrn3

Could you please tell me if (name's/your) withdrawal or distribution was

less than \$10,000 between \$10,000 and \$20,000 or over \$20,000

from (your/his/her) (2nd account type fill-in from Q97CR or Q97DR) in 2022?

- 1 Less than \$10,000
- 2 Between \$10,000 and \$20,000
- 3 Over \$20,000

DISTNEWrn4

Was (name's/your) withdrawal or distribution

less than \$1,000 between \$1,000 and \$5,000 or over \$5,000

from (your/his/her) (2nd account type fill-in from Q97CR or Q97DR) in 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$5,000
- 3 Over \$5,000

DISTNEW9

According to my calculations (name/you) withdrew or received a distribution of \$(total) altogether from the (2nd account type fill-in from Q97CR or Q97DR) in 22022. Does that sound about right?

- 1 Yes
- 2 No

DISTNEW10

What is your best estimate of the correct amount (name/you) withdrew or the distribution received from the (2nd account type fill-in from Q97CR or Q97DR) during 2022?

• Enter dollar amount

ROLLC

Did (you/name) re-invest or "roll over" any of the money into an IRA or some other kind of retirement plan?

- 1 Yes
- 2 No

ROLLAMTC

How much did (you/name) re-invest or "roll over" into an IRA or some other kind of retirement plan in 2022?

- Enter dollar amount
- Dollar amount should not exceed amount of withdrawals reported.
- Amount of withdrawals reported: \$(amount)

ROLLD

(Do/Does) (you/name) plan to re-invest or roll over any of the money?

- 1 Yes
- 2 No

ROLLAMTD

How much (do/does) (you/name) plan to re-invest or "roll over" into an IRA or some other kind of retirement plan?

- Enter dollar amount
- Dollar amount should not exceed amount of withdrawals reported.
- Amount of withdrawals reported: \$(amount)

5.15 INTEREST/DIVIDENDS ON RETIREMENT ACCOUNTS (Amounts)

RETIRENEW1

Within the (1st account type fill-in from Q97CR/Q97DR) account, how much did (name/you) earn in interest or dividends during 2022? Please include small amounts reinvested or credited to the account.

Enter dollar amount

RETIRENEWrn1

Could you tell me if (name/you) earned

less than \$1,000 between \$1,000 and \$3,000 or over \$3,000

in interest or dividends from (your/his/her) (1st account type fill-in from Q97CR/Q97DR) during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$3,000
- 3 Over \$3,000

RETIRENEWrn2

Did (name/you) earn

less than \$100 between \$100 and \$500

or over \$500

in interest or dividends from (your/his/her) (1st account type fill-in from Q97CR/Q97DR) during 2022?

- 1 Less than \$100
- 2 Between \$100 and \$500
- 3 Over \$500

RETIRENEW2

The Census Bureau can estimate the amount earned in this account based on the size of the account. So can you tell me how much money was in (name's/your) (1st account type fill-in from Q97CR/Q97DR) account at the end of 2022?

Enter dollar amount

RETIRENEW3

Within the (2nd account type fill-in from Q97CR/Q97DR) account, how much did (name/you) earn in interest or dividends during 2022? Please include small amounts reinvested or credited to the account.

Enter dollar amount

RETIRENEWrn3

Could you tell me if (name/you) earned

less than \$1,000 between \$1,000 and \$3,000 or over \$3,000

in interest or dividends from (your/his/her) (2^{nd} account type fill-in from Q97CR/Q97DR) during 2022?

- 4 Less than \$1,000
- 5 Between \$1,000 and \$3,000
- 6 Over \$3,000

RETIRENEWrn4

Did (name/you) earn

less than \$100 between \$100 and \$500

or over \$500

in interest or dividends from (your/his/her) (2nd account type fill-in from Q97CR/Q97DR) during 2022?

- 4 Less than \$100
- 5 Between \$100 and \$500
- 6 Over \$500

5.16 INTEREST/DIVIDENDS ON NON-RETIREMENT ACCOUNTS (Amounts)

NONRETIRENEW(1-7)1

How much did (you/name) receive in (interest/dividends) from [fill-in from Q99AR or Q99BR] during 2022, including even small amounts reinvested or credited to accounts?

- If a joint account please split interest income in half for each person.
- Enter dollar amount

NONRETIRENEW(1-7)rn1

Could you tell me if (you/name) received:

less than \$1,000 between \$1,000 and \$3,000 or over \$3,000

in (interest/dividends) from [fill-in from Q99AR or Q99BR] during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$3,000
- 3 Over \$3,000

NONRETIRENEW(1-7)rn2

Did (you/name) receive:

less than \$100 between \$100 and \$500 or over \$500

in (interest/dividends) from [fill-in from Q99AR or Q99BR] during 2022?

- 1 Less than \$100
- 2 Between \$100 and \$500
- 3 Over \$500

NONRETIRENEW(1-7)2

The Census Bureau can estimate the amount earned in this account based on the size of the account. How much money did (you/name) have in [fill-in from Q99AR or Q99BR] at the end of 2022?

• Enter dollar amount

Q63(c-i)p

Read if necessary

Is this a weekly, every other week, twice a month, monthly, quarterly, every 6 months, or yearly amount?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 5 Quarterly
- 6 Every 6 months
- 7 Yearly

Q63(c-i)2

How many (weekly/ every other week/ twice a month/ monthly/ quarterly/ every 6 months) payments did (you/name) receive in interest/dividend income in 2022 from [fill-in from Q99AR or Q99BR]?

Q63(c-i)3

According to my calculations (you/name) received \$(total) from interest/dividend income from [fill-in from Q99AR or Q99BR] in 2022. Does that sound about right?

- 1 Yes
- 2 No

Q63(c-i)4

What is your best estimate of the correct amount (you/NAME) received from interest payments during 2022?

*PREVIOUS ENTRIES: Q63(c-i): (amount)
Q63(c-i)p: (periodicity)
Q63(c-i)2: (number of pay periods)

Press 1 to Continue

6.2 CURRENT COVERAGE

MCARE1

?[F1]

Medicare is health insurance for people 65 years and older and people under 65 with disabilities. (Is/Are) (name/you) NOW covered by Medicare?

- * Code Medicare Parts A, B, and C and Medicare Advantage as "Yes"
- 1 Yes
- 2 No

ANYCOV

(Does/Do) (name/you) NOW have any type of health plan or health coverage?

- 1 Yes
- 2 No

MEDI

?[F1]

(Are/Is/Was/Were) (name/you) covered by Medicaid, Medical Assistance, or (CHIP/or Medicare)?

- 1 Yes
- 2 No

OTHGOVT

(Is/Are) (name/you) NOW covered by a state or government assistance program that helps pay for healthcare, such as: State Medicaid, CHIP, Exchange/Portal, or other State Health program?

- Stop reading list if respondent says "YES"
- 1 Yes
- 2 No

VET

(Is/Are) (name/you) NOW covered by Veteran's Administration (VA) care?

- 1 Yes
- 2 No

VERIFY

I recorded that (name/you) (is/are) not currently covered by a health plan. Is that correct?

- 1 Yes, is NOT covered
- 2 No, is covered

6.3 TYPE OF COVERAGE

SRCEGEN

?[F1]

ASK OR VERIFY

For the coverage (name/you) (has/have/had) NOW, (do/does/did) (he/she/you) get it through a job, the government or state, or some other way?

*1. JOB	2. GOVERNMENT OR STATE	3. OTHER WAY
Former job/Retiree	Medical Assistance	Privately purchased
Union	Medicaid	Parent or spouse
Spouse/parent's job	Medicare (Parts A+B; Part C)	Medicare Supplements
Job with the government	Medicare Advantage	Exchange plan/Marketplace
COBRA	State-provided health coverage	Group or association
TRICARE/TRICARE For Life	VA Care/CHAMPVA/other military	School

- IF RESPONDENT CHOOSES MORE THAN ONE: Let's talk about one plan at a time. Which would you like to tell me about first?
- [◆ If respondent is not covered, go back to VERIFY and select "Yes"]
- 1 Job (current or former)
- 2 Government or State
- 3 Some other way

SRCEDEPDIR

ASK OR VERIFY

(Does/Do/Did) (name/you) get that coverage through a parent or spouse, (does/do/did) (he/she/you) buy it (himself/herself/yourself), or (does/did/do) (he/she/you) get it some other way?

*1. PARENT OR SPOUSE 2. BUY IT DIRECTLY

Parent **Spouse**

Buy it Parent or spouse buys it Medicare Supplement

3. SOME OTHER WAY

Former employer Group or association Indian Health Service School

- 1 Parent or spouse
- 2 Buy it
- 3 Some other way

SRCEOTH

ASK OR VERIFY

(Does/Do/Did) (name/you) get it through a former employer, a union, a group or association, the Indian Health Service, a school, or some other way?

- 1 Former employer
- 2 Union
- 3 Group or association
- 4 Indian Health Service
- 5 School
- 6 Some other way

JOBCOV

(Is/Was) that coverage related to a JOB with the government or state?

- READ IF NECESSARY: Include coverage through FORMER employers and unions, and COBRA plans.
- 1 Yes
- 2 No

MILPLAN

ASK OR VERIFY

(Is/Was) that plan related to military service in any way?

- Examples of military plans include:
 - VA Care
 - TRICARE

- TRICARE for Life
- CHAMPVA
- Other military care
- 1 Yes
- 2 No

GOVTYPE

?[F1]

ASK OR VERIFY

(Is/Was) that coverage Medicaid, CHIP, Medicare, a plan through the military, or some other program?

- * Code Medicare Parts A, B, and C and Medicare Advantage as "Medicare"
- IF RESPONDENT CHOOSES MORE THAN ONE: Let's talk about one plan at a time. Which would you like to tell me about first?
- 1 Medicaid or Medical Assistance
- 2 CHIP
- 3 Medicare
- 4 Military
- 5 Other

MILTYPE

ASK OR VERIFY

(Is/Was) that plan through TRICARE, TRICARE for Life, CHAMPVA, VA Care, military health care, or something else?

- 1 TRICARE
- 2 TRICARE for Life
- 3 CHAMPVA
- 4 Veterans Administration (VA) care
- 5 Military health care
- 6 Other

POLHOLDER

ASK OR VERIFY

Whose name (is/was) the policy in? (Who (is/was) the policyholder?)

1-16 Name on roster

17 Someone living outside the household

Enter persons line number (1-16), or 17 for person not in the household

SRCEPTSP

ASK OR VERIFY

(Do/Did) they get that coverage through their job, (do/did) they buy it themselves, or (do/did) they get it some other way?

- 1 Job (current or former)
- 2 Buy it
- 3 Some other way

GOVPLAN

ASK OR VERIFY

What do you call the program?

- * IF RESPONDENT ANSWERS WITH INSURANCE COMPANY NAME: OK, so that would be the plan name. What do you call the program? Some examples of programs in (state) are [read full list below].
- 1 Medicaid
- 2 Medical Assistance
- 3 Indian Health Service (IHS)
- 4-12 State Medicaid Programs Names
- 13-15 State Exchange Programs Names
- 16 Plan through State Exchange Portal
- 17 Other government plan
- 18 Other (please specify)

MISCSPEC

Please Specify

Write in plan name

PORTAL

ASK OR VERIFY

(Is/Was) that coverage through (State Exchange Portal Name), which may also be known as (State Exchange Program Name 1, Name 2, Name 3)?

- 1 Yes
- 2 No

EXCHTYPE

ASK OR VERIFY

What do you call it – State Exchange Program (Portal, Name 1, Name 2, Name 3)?

1-4 State Exchange Programs Names

HIPAID

(Does/Did) (your/policyholder name's/the policyholder's) employer or union pay for all, part, or none of the health insurance premium?

- Report here employer's contribution to employee's health insurance premiums, not the employee's medical bills.
- 1 All
- 2 Part
- 3 None

SHOP

Small businesses can offer health coverage to their employees through (State Exchange SHOP Portal Name). (Is/Was) the coverage at all related to (State Exchange SHOP Portal Name), (such as State SHOP Name 1, Name 2, Name 3)?

- 1 Yes
- 2 No

POLHOLDER2

ASK OR VERIFY

Whose name (is/was) the policy in? (Who [is/was] the policyholder?)

- 1-16 Name on roster
- 17 Someone living outside the household

Enter persons line number (1-16), or 17 for person not in the household

PREMYN

Is there a monthly premium for this plan?

- A monthly premium is a fixed amount of money people pay each month to have health coverage. It does not include copays or other expenses such as prescription costs.
- 1 Yes
- 2 No

PREMSUBS

Is the cost of the premium subsidized based on (your/family) income?

- * A monthly premium is a fixed amount of money people pay each month to have health coverage. It does not include copays or other expenses such as prescription costs.
- Subsidized health coverage is insurance with a reduced premium. Low and middle income families are eligible to receive tax credits that allow them to pay lower premiums for insurance bought through healthcare exchanges or marketplaces.
- 1 Yes
- 2 No

6.4 MONTHS OF COVERAGE

BEFORAFT

Did (name's/your) coverage from (plan type) start before January 1, 2022?

- * READ IF NECESSARY: Your best estimate is fine.
- (READ IF NECESSARY: If (policyholder) switched employers or plans through (your/their) employer, consider it the same plan.)
- (READ IF NECESSARY: If (policyholder) switched plans that (you/he/she) (buy/buys), consider it the same plan.)
- 1 Yes
- 2 No

MNTHBEG1/2

In which month did (that/this) coverage start?

- * READ IF NECESSARY: Your best estimate is fine.
- (READ IF NECESSARY: If (policyholder) switched employers or plans through (your/their) employer, consider it the same plan.)

- ◆ (READ IF NECESSARY: If (policyholder) switched plans that (you/he/she) (buy/buys), consider it the same plan.)
- This question refers to (plan type).
- 1 January
- 2 February
- 3 March
- 4 April
- 5 May
- 6 June
- 7 July
- 8 August
- 9 September
- 10 October
- 11 November
- 12 December

YEARBEG

ASK OR VERIFY

Which year was that?

- (READ IF NECESSARY: If (policyholder) switched employers or plans through (your/their) employer, consider it the same plan.)
- (READ IF NECESSARY: If (policyholder) switched plans that (you/he/she) (buy/buys), consider it the same plan.)
- This question refers to (plan type).
- 1 2022
- 2 2023

CNTCOV

Has it been continuous since (beginning month)?

- (READ IF NECESSARY: If (policyholder) switched employers or plans through (your/their) employer, consider it the same plan.)
- (READ IF NECESSARY: If (policyholder) switched plans that (you/he/she) (buy/buys), consider it the same plan.)
- * READ IF NECESSARY: If the gap in coverage was less than 3 weeks, consider the coverage "continuous."

- This question refers to (plan type).
- 1 Yes
- 2 No

SPELLADD

I have recorded that (name/you) (was/were) covered by (plan type) in (months of coverage). Were there any OTHER months between January 2022 and now that (name/you) (was/were) also covered by (plan type)?

- 1 Yes
- 2 No

ANYTHIS

Which months (was/were) (name/you) covered by (plan type) THIS year -- in 2023?

- 1 January 2023
- 2 February 2023
- 3 March 2023
- 4 April 2023
- 20 All months of 2023
- 21 No months of 2023

ANYLAST

Which months (was/were) (name/you) covered by (plan type) LAST year -- in 2022?

- 1 January
- 2 February
- 3 March
- 4 April
- 5 May
- 6 June
- 7 July
- 8 August
- 9 September
- 10 October
- 11 November
- 12 December
- All months from January 2022 until December 2022
- No months from January 2022 until December 2022

WMNTHS

Which months between January 2022 and now (was/were) (name/you) covered by (plan type)?

- 1 January 2022
- February 2022
- 3 March 2022
- 4 April 2022
- 5 May 2022
- 6 June 2022
- 7 July 2022
- 8 August 2022
- 9 September 2022
- 10 October 2022
- November 2022
- 12 December 2022
- 13 January 2023
- 14 February 2023
- 15 March 2023
- 16 April 2023
- 20 All months from January 2022 until now
- No months from January 2022 until now

6.5 OTHER HOUSEHOLD MEMBERS

OTHMEMB

Between January 1, 2022 and now, was anyone in the household other than (name/you) ALSO covered by (plan type)?

- 1 Yes
- 2 No

COVWHO

Who else was covered? Who else was covered by (plan type)?

- PROBE: Anyone else?
- 0 No one listed
- 1-16 Person 1 through 16's name
- 96 All persons listed

SAMEMNTHS

(Was/Were) (name/names) also covered from January 2022 until now?

- This question refers to (plan type)
- 1 All also covered from January 2022 until now
- None covered from January 2022 until now

MNTHS P(1-16)M

Which months between January 2022 and now was (NAME) covered? [How about (NAME)?]

- This question refers to (plan type)
- 1 January 2022
- February 2022
- 3 March 2022
- 4 April 2022
- 5 May 2022
- 6 June 2022
- 7 July 2022
- 8 August 2022
- 9 September 2022
- 10 October 2022

- 12 December 2022
- 13 January 2023
- February 2023
- 15 March 2023
- 16 April 2023
- All months from January 2022 until now
- No months from January 2022 until now

OTHOUT

Does that plan cover anyone living outside this household?

- This question refers to (plan type)
- 1 Yes
- 2 No

OTHWHO

How old are they -- under 19, 19-25, or older than 25?

- Mark all that apply
- 1 Under 19
- 2 19-25 years old
- 3 Older than 25

6.6 ADDITIONAL PLANS

ADDGAP

So far, I have recorded that (name/you) (was/were) NOT covered in (months of no coverage). (Was/Were) (name/you) covered by any type of health plan or health coverage in (those months/that month)?

- READ IF NECESSARY: Do not include plans that cover only one type of care, such as dental or vision plans.
- 1 Yes
- 2 No

ADDOTH

Other than (plan type[s]), (was/were) (name/you) covered by any other type of health plan or health coverage AT ANY TIME between January 1, 2022 and now?

- READ IF NECESSARY: Do not include plans that cover only one type of care, such as dental or vision plans.
- 1 Yes
- 2 No

6.7 EMPLOYER-SPONSORED INSURANCE OFFERS AND TAKEUP

ESIINTRO

Earlier I recorded that (name/you) (is/are) employed but (does/do) not have health coverage through (his/her/your) job.

1 Enter 1 to continue

OFFER

Does (employer name) offer a health insurance plan to any of its employees?

- 1 Yes
- 2 No

COULD

Could (name/you) be in this plan if (he/she/you) wanted to?

- 1 Yes
- 2 No

WNTAKE

Why (aren't/isn't) (you/he/she) in this plan?

- Choose all that apply
- 1 Covered by another plan
- 2 Traded health insurance for higher pay
- 3 Too expensive
- 4 Don't need health insurance
- 5 Have a pre-existing condition
- 6 Haven't yet worked for this employer long enough to be covered
- 7 Contract or temporary employees not allowed in plan
- 8 Other/specify

WNTAKESPEC

Please specify other reason why not in the plan

WNELIG

Why not? Why can't (name/you) be in this plan if (he/she/you) wanted to?

- Choose all that apply
- 1 Don't work enough hours per week or weeks per year
- 2 Contract or temporary employees not allowed in plan
- 3 Haven't yet worked for this employer long enough to be covered
- 4 Have a pre-existing condition
- 5 Too expensive
- 6 Other/specify

WNELIGSPEC

Please specify other reason why not eligible.

6.8 HEALTH STATUS

HealthStatus Intro

An important factor in evaluating a person's or family's health insurance situation is their current health status and/or the current health status of other family members.

Enter 1 to Continue FASCIMILE OF ASEC SUPPLEMENT QUESTIONNAIRE

HealthStatus

Would you say (name's/your) health in general is excellent, very good, good, fair, or poor?

- 1 Excellent
- 2 Very good
- 3 Good
- 4 Fair
- 5 Poor

6.9 MEDICAL EXPENDITURES

MedExp Intro

Next I would like to ask about out-of-pocket medical expenses during 2022.

- Press 1 to Continue
- 1 Enter 1 to continue

HIPREM

[Earlier I recorded that (your/name's) employer or union did not pay for (your/his/her) entire health insurance premium.] Last year, how much did (you/name) pay out-of-pocket for ALL health insurance premiums [covering (yourself/himself/herself) or others in the household]? Include both comprehensive and supplemental plans (such as vision and dental insurance).

[What about (you/name)?]

[DO NOT include the \$(amount reported) per month from Medicare deductions from (Social Security/ Social Security Disability/ Social Security and Social Security Disability) payments mentioned earlier.]

• Enter dollar amount

MEDAMT

?[F1]

Last year, how much was paid out-of-pocket for (your/name's) OWN medical care, such as copays for doctor and dentist visits, diagnostic tests, prescription medicine, glasses and contacts, and medical supplies?

[What about (you/name)? Last year, how much was paid out-of-pocket for (your/name's) OWN medical care, such as copays for doctor and dentist visits, diagnostic tests, prescription medicine, glasses and contacts, and medical supplies?]

Include any amount paid out-of-pocket on (your/his/her) behalf by anyone in this household.

Enter dollar amount

OTCMEDAMT

Last year, how much was paid out-of-pocket for (your/name's) non-prescription healthcare products such as vitamins, allergy and cold medicine, pain relievers, quit smoking aids, AND anything else not yet reported?

[What about (you/name)? Last year, how much was paid out-of-pocket for (your/name's) non-prescription healthcare products such as vitamins, allergy and cold medicine, pain relievers, quit smoking aids, AND anything else not yet reported?]

Include any amount paid out-of-pocket on (your/his/her) behalf by anyone in this household.

- Enter dollar amount
- If unsure of the amount, a best guess is acceptable.

7 EMPLOYER'S PENSION PLAN

Q74a

Other than Social Security did (the/any) employer or union that (name/you) worked for in 2022 have a pension or other type of retirement plan for any of its employees?

- 1 Yes
- 2 No

Q74b

(Were/Was) (name/you) included in that plan?

- 1 Yes
- 2 No

8 LOW INCOME ITEMS

8.1 SCHOOL LUNCHES

Q80

During 2022 which of the children ages 5 to 18 in this household usually ate a complete lunch offered at school?

- "Usually" refers to days where school was being held in person, such as during the pre-pandemic period or in areas where schools remained open.
- Probe: Anyone else?
- Enter all that apply, separate using the space bar or a comma.
- Enter 96 for All
- Enter 0 for None

Q83

During 2022 which of the children in this household received free or reduced priced lunches because they qualified for the Federal School Lunch Program or their school provided free lunches to all students?

- Probe: Anyone else?
- Enter all that apply, separate using the space bar or a comma.
- * Enter 96 for All
- * Enter 0 for None

ECVDPEBT

During 2022, did you or anyone in this household receive a school meal debit, pandemic EBT, or P-EBT card?

- 1 Yes
- 2 No

8.2 PUBLIC HOUSING

Q85

Is this public housing, that is, is it owned by a local housing authority or other public agency?

- 3 Yes
- 4 No

Q86

Are you paying lower rent because the Federal, State, or local government is paying part of the cost?

- 1 Yes
- 2 No

8.3 WOMEN, INFANTS, AND CHILDREN NUTRITION PROGRAM (WIC)

SWRWIC

At any time during 2022, (was/were) (you/ anyone in this household) on WIC, the Women, Infants, and Children Nutrition Program?

- 1 Yes
- 2 No

SWRW

Who received WIC for themselves or on behalf of a child?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone else?

8.4 ENERGY ASSISTANCE

Q93

The government has an energy assistance program which helps pay heating and cooling costs. This assistance can be received directly by the household or it can be paid directly to the electric company, gas company, or fuel dealer.

In 2022, (did you/did this household) receive assistance of this type from the federal, state, or local government?

- 1 Yes
- 2 No

Q93pr1

Do you remember receiving an additional or unexpected check that was sent during the year to help pay heating or cooling costs?

- 1 Yes
- 2 No

Q93pr2

Was it used to pay heating costs?

- 1 Yes
- 2 No

Q94

Altogether, how much energy assistance has been received in 2022?

• Enter annual amount only

Q94rn1

Could you tell me if you received:

less than \$1,000 between \$1,000 and \$3,000 or over \$3,000

in energy assistance during 2022?

- 1 Less than \$1,000
- 2 Between \$1,000 and \$3,000
- 3 Over \$3000

Q94rn2

Did you receive:

less than \$100 between \$100 and \$500 or over \$500

in energy assistance during 2022?

- 1 Less than \$100
- 2 Between \$100 and \$500
- 3 Over \$500

9 MIGRATION

9.1 1-YEAR MIGRATION

MIGSAM

(Were/Was) (you/reference person's name) living in this house (or apartment) one year ago?

- 1 Yes, this house (apt)
- 2 No, different house in U.S.
- No, outside the U.S.

MIGPLC

Where did (reference person's name/you) live one year ago?

- Name of city/town/post office

10.1 PROPERTY VALUE/PRESENCE OF MORTGAGE

VALPROP

About how much do you think this (house and lot/apartment/mobile home) would sell for if it were for sale?

• Enter dollar amount

VALPROPR

Could you tell me if you think this (house and lot/apartment/mobile home) would sell for:

less than \$100,000 between \$100,000 and \$250,000 between \$250,000 and \$500,000 or \$500,000 or more?

- 1 Less than \$100,000
- 2 Between \$100,000 and \$250,000
- 3 Between \$250,000 and \$500,000
- 4 \$500,000 or more

MORTYN

Not counting home equity loans, do you or any other member of this household have a mortgage, deed of trust, contract to purchase, or similar debt on THIS property?

- 1 Yes
- 2 No

SMORTYN

Do you or any member of this household have a second mortgage or a home equity loan on THIS property?

- 1 Yes, home equity loan.
- 2 Yes, second mortgage.
- 3 Yes, second mortgage and home equity loan.
- 4 No

10.2 CHILD CARE

Q95

Now we want to ask about some of your expenses for children.

Did (you/ anyone in this household) PAY for the care of (your/their) (child/children) while (you/they) worked in 2022?

- Include: All child care expenses including preschool and nursery school expenses, before and after school care, and summer care.
- Do not include: cost of kindergarten or grade/elementary school.
- 1 Yes
- 2 No

Q95A

Which children needed care while their parents worked?

- Enter all that apply, separate using the space bar or a comma.
- Probe: Anyone else?
- Enter 96 for All persons
- Enter 0 if none

CCFREQ

What is the easiest way for you to tell us how much was paid for child care while (you/they) worked in 2022: weekly, every other week, twice a month, monthly, or yearly?

- 1 Weekly
- 2 Every other week
- 3 Twice a month
- 4 Monthly
- 7 Yearly

CCAMT

How much was paid (weekly/every other week/twice a month/monthly) for child care?

- Include child care payments made for all children in the household.
- * For example, if there are two adults in the household with childcare expenses use the total paid by both adults. Do not try to separate the payments. Record one total for the entire household.

CCNUMPAY

How many (weekly/every other week/twice a month/monthly) payments did (you/they) make during 2022?

$$(1-52), (1-26), (1-24), (1-12)$$

CCTOT

Then (you/they) paid \$(amount) altogether in child care while (you/they) worked during 2022. Does that sound about right?

- 1 Yes
- 2 No

CCEST

What is your best estimate of the correct amount (you/they) paid for child care while (you/they) worked in 2022?

10.3 CHILD SUPPORT PAID

CSPCHILD

(Do you/Does anyone in this household) have any children who lived elsewhere with their other parent or guardian at anytime during 2022?

- 1 Yes
- 2 No

CSPWHO

Who had children who lived elsewhere? Anyone else?

- Enter line number
- Enter all that apply, separate using the space bar or a comma.

CSPREQ

In 2022, did (name/you) pay any child support for children living elsewhere with their other parent or guardian?

- 1 Yes
- 2 No

CSPAMT

How much child support did (name/you) pay in 2022?

- Enter dollar amount
- COUNT ALL FORMS OF CHILD SUPPORTS PAYMENTS, INCLUDING:
 - ...PAYMENTS MADE DIRECTLY TO THE OTHER PARENT/GUARDIAN;
 - ...PAYMENTS MADE THROUGH A COURT OR AGENCY; AND
 - ...PAYMENTS WITHHELD FROM THIS PERSON'S PAYCHECK

10.4 Affordable Connectivity Program

BBSUB

At any time during 2022, did you or anyone in this household receive benefits from the Affordable Connectivity Program or any other program that provided reduced price WIFI, broadband, or other home internet services?

1 Yes 2 No

BBSUB MNTH

How many months did (you/anyone in this household) receive these benefits in 2022?

* (1-12)

Attachment A. Income Range Follow-up Questions

The three levels of income range follow-up questions are:

- 1) <u>High-range</u> income follow-up brackets:
 - Less than \$45,000
 - Between \$45,000 and \$60,000
 - \$60,000 or more

If the respondent selects the <u>lowest bracket</u> (Less than \$45,000), then the following ranges will be presented to the respondent:

- Less than \$15,000
- Between \$15,000 and \$30,000
- \$30,000 or more
- 2) Mid-range income follow-up questions:
 - Less than \$10,000
 - Between \$10,000 and \$20,000
 - \$20,000 or more

If the respondent selects the <u>lowest bracket</u> (Less than \$10,000), then the following ranges will be presented to the respondent:

- Less than \$1,000
- Between \$1,000 and \$5,000
- \$5,000 or more
- 3) <u>Low-range</u> income follow-up questions:
 - Less than \$1,000
 - Between \$1,000 and \$3,000
 - \$3,000 or more

If the respondent selects the <u>lowest bracket</u> (Less than \$1,000), then the following ranges will be presented to the respondent:

- Less than \$100
- Between \$100 and \$500
- \$500 or more

Attachment B. Income Source and Follow-Up Question Range Level

The following table displays the income source and range level used in the follow-up range questions.

Source Screen	Income Source	Range Screen	Range Level	
Q48AA	Earnings from Longest Job	PUQ48AARN1	High

APPENDIX F

SPECIFIC METROPOLITAN IDENTIFIERS

(Beginning August 2015)

List 1: FIPS Metropolitan Area (CBSA) Codes

List 2: FIPS Consolidated Statistical Area (CSA) Codes

List 3: Individual Principal Cities

List 4: FIPS County Codes

Unless otherwise noted, all definitions for geographic areas on these lists reflect the February 28, 2013 OMB definitions.

LIST 1: FIPS Metropolitan Area (CBSA) Codes

Metropolitan Areas are defined using February 28, 2013 OMB definitions.

FIPS Code	Metropolitan (CBSA) TITLE
10180	Abilene, TX
10420	Akron, OH
10580	Albany-Schenectady-Troy, NY
10740	Albuquerque, NM
10900	Allentown-Bethlehem-Easton, PA-NJ
11100	Amarillo, TX
11460	Ann Arbor, MI
11540	Appleton, WI
11700	Asheville, NC
12020	Athens-Clarke County, GA
12060	Atlanta-Sandy Springs-Roswell, GA
12100	Atlantic City-Hammonton, NJ
12220	Auburn-Opelika, AL
12260	Augusta-Richmond County, GA-SC
12420	Austin-Round Rock, TX
12540	Bakersfield, CA
12580	Baltimore-Columbia-Towson, MD
12620	Bangor, ME
12700	Barnstable, MA
12940	Baton Rouge, LA
12980	Battle Creek, MI
13140	Beaumont-Port Arthur, TX
13460	Bend-Redmond, OR
13740	Billings, MT
13780	Binghamton, NY
13820	Birmingham-Hoover, AL
13980	Blacksburg—Christiansburg-Radford, VA
14010	Bloomington, IL
14020	Bloomington, IN
14260	Boise City, ID
14460	Boston-Cambridge-Newton, MA-NH
14500	Boulder, CO
14540	Bowling Green, KY
14860	Bridgeport-Stamford-Norwalk, CT

LIST 2: FIPS Consolidated Statistical Area (CSA) Codes

The following CSA's (Combined Statistical Areas) contain 2 or more Metropolitan Statistical Areas that are in the CPS sample and are individually identified on the public use files. Micropolitan Statistical Areas are not specifically identified in the CPS and are not used to identify CSA's nor are parts of such areas coded as belonging to CSA's. The component CBSA's identified on the CPS Public Use Files are listed for each CSA.

CSA Code	CBSA Code	CSA Title Component Parts (CBSA's)

List 3: Individual Principal Cities

Please Note: You must use the CBSA code in combination with the city code to uniquely identify principal cities. If a county name is provided, you must incorporate the county code into any algorithm used to tabulate a specific city's characteristics. The same applies to state codes for multi-state CBSA's.

CBSA Code	Title City	GTINDVPC
38060	Phoenix-Mesa-Scottsdale, AZ	
	Phoenix	1
	Mesa	2
	Scottsdale	3

List 4: FIPS County Codes

Please note that these county codes must be used in conjunction with state codes to create unique county identifiers as county codes start with 001 in each state. Counties are only included on this list if the entire county is identified.

FIPS

Source of the Data and Accuracy of the Estimates for the 2023 Annual Social and Economic Supplement Microdata File

SOURCE OF THE DATA

The data in this microdata file and the estimates in the reports *Income in the United States: 2022, Poverty in the United States: 2022,* and *Health Insurance Coverage in the United States: 2022* come from the 2023¹ Annual Social and Economic Supplement (ASEC) of the Current Population Survey (CPS). The U.S. Census Bureau conducts the CPS ASEC over a 3-month period in February, March, and April, with most of the data collection occurring in the month of March. The CPS ASEC uses two sets of questions, the basic CPS and a set of supplemental questions. The CPS, sponsored jointly by the Census Bureau and the U.S. Bureau of Labor Statistics, is the country's primary source of labor force statistics for the entire population. The Census Bureau and the U.S. Bureau of Labor Statistics also jointly sponsor the CPS ASEC.

<u>Basic CPS</u>. The monthly CPS collects primarily labor force data about the civilian noninstitutionalized population living in the United States. The institutionalized population, which is excluded from the universe, consists primarily of the population in correctional institutions and nursing homes (98 percent of the 4.0 million institutionalized people in the 2010 Census). Starting in August 2017, college and university dormitories were also excluded from the universe because most of the residents had usual residences elsewhere. Interviewers ask questions concerning labor force participation of each member 15 years old and older in sample households. Typically, the week containing the nineteenth of the month is the interview week. The week containing the twelfth is the reference week (i.e., the week about which the labor force questions are asked).

The CPS uses a multistage probability sample based on the results of the decennial census, with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. When files from the most recent decennial census become available, the Census Bureau gradually introduces a new sample design for the CPS.

Every ten years, the CPS first-stage sample is redesigned 2 reflecting changes based on the most recent decennial census. In the first stage of the sampling process, primary sampling units (PSUs) 3 were selected for sample. In the 2010 sample design, the United States was divided into 1,987 PSUs. These PSUs were then grouped into 852 strata. Within each stratum, a single PSU was chosen for the sample, with its probability of selection

For clarity and consistency throughout this report, the term "collection year" is the year the data is collected (in this case, 2023), and "data year" is the year about which the data are obtained (in this case, 2022). 2023 CPS ASEC asks questions of data year 2022, 2022 CPS ASEC asks questions of data year 2021, etc.

² For detailed information on the 2010 sample redesign, please refer to Bureau of Labor Statistics (2014).

The PSUs correspond to substate areas (i.e., counties or groups of counties) that are geographically contiguous.

proportional to its population as of the most recent decennial census. In the case of strata consisting of only one PSU, the PSU was chosen with certainty.

Approximately 69,000 sampled addresses were selected from the sampling frame for the March basic CPS. Based on eligibility criteria, eight percent of these sampled addresses were sent directly to computer-assisted telephone interviewing (CATI). The remaining sampled addresses were assigned to interviewers for computer-assisted personal interviewing (CAPI).⁴ Of all addresses in sample, about 59,000 were determined to be eligible for interview. Interviewers obtained interviews at about 40,500 of the housing units at these addresses. Noninterviews occur when the occupants are not found at home after repeated calls or are unavailable for some other reason. Table 1 summarizes historical changes in the CPS design. ⁵

<u>The 2023 Annual Social and Economic Supplement</u>. In addition to the basic CPS questions, interviewers asked supplementary questions for the CPS ASEC. They asked these questions of the civilian noninstitutionalized population and also of military personnel who live in households with at least one other civilian adult. The additional questions covered the following topics:

- Household and family characteristics.
- Marital status.
- Geographic mobility.
- Foreign-born population.
- Income from the previous calendar year.
- Work status/occupation.
- Health insurance coverage.
- Program participation.
- Educational attainment.

Including the basic CPS sample, approximately 89,000 addresses were in sample for the CPS ASEC. About 78,000 sampled addresses were determined to be eligible for interview, and about 57,000 interviews were conducted (refer to Table 1).

The additional sample for the CPS ASEC provides more reliable data than the basic CPS for Hispanic households, non-Hispanic minority households, and non-Hispanic White households with children 18 years or younger. These households were identified for sample from previous months and the following April. For more information about the households eligible for the CPS ASEC, please refer to U.S. Census Bureau (2019c).

⁴ For further information on CATI and CAPI and the eligibility criteria, please refer to U.S. Census Bureau (2019c).

⁵ Counts and estimates throughout this source and accuracy statement are rounded according to Disclosure Review Board rounding rules.

Source: U.S. Census Bureau, Current Population Survey, 1959-2023 Annual Social and Economic Supplement.

- A PSUs are primary sampling units.
- B CPS is the Current Population Survey.
- ^C CPS ASEC is the Annual Social and Economic Supplement of the Current Population Survey.
- The CPS ASEC was referred to as the Annual Demographic Supplement (ADS) until 2002.
- Starting with 2022, the number of interviewed and not interviewed cases are rounded to the nearest 500 due to disclosure review board policy. Therefore, numbers may not sum to totals due to rounding.
- The 2014 CPS ASEC Redesign indicates the subsample of the basic CPS households which received the redesigned ASEC questionnaire incorporating new income and health insurance questions.
- The 2014 CPS ASEC Traditional indicates the subsample of the basic CPS households which received the same ASEC questionnaire that was used in the 2013 CPS ASEC.
- ^H The Census Bureau redesigned the CPS following the Census 2000. During phase-in of the new design, addresses from the new and old designs were in the sample.
- The Census Bureau redesigned the CPS following the 1980 Decennial Census of Population and Housing.
- The Census Bureau redesigned the CPS following the 1970 Decennial Census of Population and Housing.

Estimation Procedure. This survey's estimation procedure adjusts weighted sample results to agree with independently derived population controls of the civilian noninstitutionalized population of the United States, each state, and the District of Columbia. These population controls are prepared monthly as part of the Census Bureau's Population Estimates Program.⁶

The population controls for the nation are distributed by demographic characteristics in two ways:

- Age, sex, and race (White alone, Black alone, and all other groups combined).
- Age, sex, and Hispanic origin.

The population controls for the states are distributed by:

For additional information on population controls, including details on the demographic characteristics used and net international components, please refer to Chapters 1-3 and Appendix: History of the Current Population Survey of U.S. Census Bureau (2019c).

- Race (Black alone and all other race groups combined).
- Age (0-15, 16-44, and 45 and over).
- Sex.

The independent estimates by age, sex, race, and Hispanic origin, and for states by selected age groups and broad race categories, are developed using the basic demographic accounting formula whereby the population from the 2020 Census data is updated using data on the components of population change (births, deaths, and net international migration) with net internal migration as an additional component in the state population controls.

The net international migration component of the population controls includes:

- Net international migration of the foreign born;
- Net migration between the United States and Puerto Rico;
- Net migration of natives to and from the United States; and
- Net movement of the Armed Forces population to and from the United States.

Because the latest available information on these components lags behind the survey date, it is necessary to make short-term projections of these components to develop the estimate for the survey date.

The estimation procedure of the CPS ASEC includes a further adjustment to give married and unmarried partners the same weight.

ACCURACY OF THE ESTIMATES

A sample survey estimate has two types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error. The nature of the sampling error is known given the survey design; the full extent of the nonsampling error is unknown.

<u>Sampling Error</u>. Since the CPS estimates come from a sample, they may differ from figures from an enumeration of the entire population using the same questionnaires, instructions, and enumerators. For a given estimator, the difference between an estimate based on a sample and the estimate that would result if the sample were to include the entire population is known as sampling error. Standard errors, as calculated by methods described in "Standard Errors and Their Use," are primarily measures of the magnitude of sampling error. However, the estimation of standard errors may include some nonsampling error.

Nonsampling Error. For a given estimator, the difference between the estimate that would result if the sample were to include the entire population and the true population value being estimated is known as nonsampling error. There are several sources of nonsampling error that may occur during the development or execution of the survey. It can occur because of circumstances created by the interviewer, the respondent, the survey

instrument, or the way the data are collected and processed. Some nonsampling errors, and examples of each, include:

- Measurement error: The interviewer records the wrong answer, the respondent provides incorrect information, the respondent estimates the requested information, or an unclear survey question is misunderstood by the respondent.
- Coverage error: Some individuals who should have been included in the survey frame were missed.
- Nonresponse error: Responses are not collected from all those in the sample or the respondent is unwilling to provide information.
- Imputation error: Values are estimated imprecisely for missing data.
- Processing error: Forms may be lost, data may be incorrectly keyed, coded, or recoded, etc.

To minimize these errors, the Census Bureau applies quality control procedures during all stages of the production process including the design of the survey, the wording of questions, the review of the work of interviewers and coders, and the statistical review of reports.

Answers to questions about money income often depend on the memory or knowledge of one person in a household. Recall problems can cause underestimates of income in survey data because it is easy to forget minor or irregular sources of income. Respondents may also misunderstand what the Census Bureau considers money income or may simply be unwilling to answer these questions correctly because the questions are considered too personal. For more details, please refer to Appendix C of U.S. Census Bureau (1993).

Two types of nonsampling error that can be examined to a limited extent are nonresponse and undercoverage.

Nonresponse. The effect of nonresponse cannot be measured directly, but one indication of its potential effect is the nonresponse rate. For the cases eligible for the 2023 ASEC, the basic CPS household-level unweighted nonresponse rate was 27.1 percent. The household-level unweighted nonresponse rate for the ASEC was an additional 18.3 percent. These two nonresponse rates lead to a combined supplement unweighted nonresponse rate of 40.4 percent.⁷

Responses are made up of complete interviews and sufficient partial interviews. A sufficient partial interview is an incomplete interview in which the household or person answered enough of the questionnaire for the supplement sponsor to consider the interview complete. The remaining supplement questions may have been edited or imputed to fill in missing values. Insufficient partial interviews are considered to be nonrespondents. Refer to the supplement overview attachment in the technical

⁷ Because the ASEC is at the household level, the overall/combined ASEC response rate is a product of the basic CPS response rate and the ASEC response rate.

documentation for the specific questions deemed critical by the sponsor as necessary to answer in order to be considered a sufficient partial interview.

As a result of sufficient partial interviews being considered responses, individual items/questions have their own response and refusal rates. As part of the nonsampling error analysis, the item response rates, item refusal rates, and edits are reviewed. For the CPS ASEC, the unweighted item refusal rates range from 0.0 percent to 2.0 percent. The unweighted item allocation rates range from 21.9 percent to 74.1 percent.

<u>Undercoverage</u>. The concept of coverage with a survey sampling process is defined as the extent to which the total population that could be selected for sample "covers" the survey's target population. Missed housing units and missed people within sample households create undercoverage in the CPS. Overall CPS undercoverage for March 2023 is estimated to be about ten percent. CPS coverage varies with age, sex, and race. Generally, coverage is higher for females than for males and higher for non-Blacks than for Blacks. This differential coverage is a general problem for most household-based surveys.

The CPS weighting procedure mitigates bias from undercoverage, but biases may still be present when people who are missed by the survey differ from those interviewed in ways other than age, race, sex, Hispanic origin, and state of residence. How this weighting procedure affects other variables in the survey is not precisely known. All of these considerations affect comparisons across different surveys or data sources.

A common measure of survey coverage is the coverage ratio, calculated as the estimated population before poststratification divided by the independent population control. Table 2 shows March 2023 CPS coverage ratios by age and sex for certain race and Hispanic groups. The CPS coverage ratios can exhibit some variability from month to month.

Table 2. Current Population Survey Coverage Ratios: March 2023

	<u>Total</u>		White alone		Black alone		Residual race ^A		<u>Hispanic^B</u>		
Age group	All people	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female

Note: For a more detailed discussion on the use of parameters for race and ethnicity, please refer to the "Generalized Variance Parameters" section.

<u>Comparability of Data</u>. Data obtained from the CPS and other sources are not entirely comparable. This is due to differences in interviewer training and experience and in differing survey processes.⁸ These differences are examples of nonsampling variability not reflected in the standard errors. Therefore, caution should be used when comparing results from different sources.

Data users should be aware that estimates in the reports, *Income in the United States: 2022*, *Poverty in the United States: 2022*, and *Health Insurance Coverage in the United States: 2022* use the internal CPS ASEC file. The Census Bureau must keep survey responses confidential, so disclosure avoidance techniques are applied to files prior to public release. Therefore, some estimates using the microdata files may differ from the estimates provided in the reports.

Caution should be used when comparing estimates of the Hispanic population over time. No independent population control totals for people of Hispanic origin were used before 1985.

Caution should also be used when comparing CPS ASEC results from different years. Below, more detail is provided on several reasons for caution when comparing estimates across years.

A The Residual race group includes cases indicating a single race other than White or Black, and cases indicating two or more races.

B Hispanics may be any race.

Survey processes include, but are not limited to, question wording, universe, sampling frame, interview modes, and weighting.

Nonresponse Bias in the CPS ASEC. Data users should exercise caution when comparing estimates for data years 2019, 2020, and 2021 from the reports or from the microdata files to those from other years due to the effects that the coronavirus (COVID-19) had on interviewing and response rates. The Census Bureau administers the CPS ASEC each year between February and April by telephone and in-person interviews, with most data collected in March. In 2020, data collection faced extraordinary circumstances due to the onset of the COVID-19 pandemic; the Census Bureau suspended in-person interviews and closed telephone contact centers. The response rate for the CPS basic household survey declined to 73 percent in March 2020, from 82 percent in March 2019. Pre-pandemic response rates were regularly above 80 percent.

Standard collection procedures, including in-person interviews, have since resumed, but response rates remain remain below pre-pandemic levels. The response rate for the CPS basic household survey declined from 72.2 percent in March 2022 to 68.9 percent in March 2023.9 Since the response rates remain below pre-pandemic levels, it is important to examine how respondents differ from nonrespondents, as this difference could affect estimates. Using administrative data, Census Bureau researchers have documented that nonrespondents in the 2020 to 2023 surveys are less similar to respondents than in earlier years. Notably, respondents from 2020 to 2023 had relatively higher income than nonrespondents. For more details on how sample differences and the associated nonresponse bias impact income and official poverty estimates, refer to U.S. Census Bureau (2023b). The effects of data collection issues on 2020 health insurance coverage estimates are detailed in the working paper, U.S. Census Bureau (2020).

Change in Processing System. Data users should exercise caution when comparing estimates from the CPS ASEC for data years 2018 through 2022 to estimates from earlier years. An updated data processing system was implemented beginning with data year 2018 estimates. This system introduced demographic edit changes to account for same-sex couples, revised procedures for editing income and health insurance variables, and added several new income and health insurance variables. Changes to the editing procedures encompassed both changes to the resolution of logically inconsistent data and changes to the imputation methods. The 2019 through 2023 CPS ASEC estimates for data years 2018 through 2022 can be compared to the 2018 CPS ASEC Bridge Files. Which contain data year 2017 estimates, and to the 2017 CPS ASEC Research Files. Which contain estimates for data year 2016. The 2017 Research File and the 2018 Bridge File both use the new processing system and serve as a bridge between the legacy production files and the updated processing system. Data users should be aware that the estimates from the 2017 and 2018 CPS ASEC Files for data years 2016 and 2017

These response rates are specifically for the March CPS and differ from the response rates obtained using the values in the "Nonresponse" section that are for the full CPS sample that was eligible for ASEC.

For additional information, please refer to Rothbaum & Bee (2021), U.S. Census Bureau (2021c), and U.S. Census Bureau (2022c), and U.S. Census Bureau (2023b).

For additional information on the 2018 CPS ASEC Bridge Files, please refer to the Documentation and User Notes in U.S. Census Bureau (2019b).

For additional information on the 2017 CPS ASEC Research Files, please refer to the Documentation and User Notes in U.S. Census Bureau (2019a).

using the legacy processing system are not directly comparable to estimates from the 2019 CPS ASEC through 2023 CPS ASEC.

<u>Change in Questionnaire</u>. In 2014, the ASEC questionnaire was resigned to incorporate new income and health insurance questions. Due to the differences in measurement, health insurance estimates for 2014-2017 CPS ASEC for data years 2013-2016 are not directly comparable to health insurance estimates for previous years. ¹³ For income and poverty estimates, when survey changes had statistically significant impacts, comparisons should be made by adjusting historical published estimates to approximate the magnitude of those impacts. ¹⁴

Change in Census-Based Controls. Data users should exercise caution when comparing estimates for 2022 from the microdata file or from the ASEC reports, *Income in the United* States: 2022, Poverty in the United States: 2022, and Health Insurance Coverage in the United States: 2022 (which reflect 2020 Census-based controls 15), with estimates from 2020 or earlier microdata files or ASEC Reports. Estimates from data years 2021 and 2022 (March 2022 CPS and March 2023 CPS, respectively) reflect 2020 Census-based controls. Estimates from data years 2011 through 2020 (March 2012 CPS through March 2021 CPS) reflect 2010 Census-based controls. Estimates from data years 2001 through 2010 (March 2002 CPS through March 2011 CPS) reflect 2000 Census-based controls and estimates from data vears 1993 through 2000 (March 1994 CPS to March 2001 CPS) reflect 1990 Census-based controls. Ideally, the same population controls should be used when comparing any estimates. In reality, the use of the same population controls is not practical when comparing trend data over a period of 10 to 20 years. Thus, when it is necessary to combine or compare data based on different controls or different designs, data users should be aware that changes in weighting controls or weighting procedures could create small differences between estimates.

Microdata files from previous years reflect the latest available census-based controls. Overall, using 2020-Census based population controls resulted in statistically significant but substantively minor differences in the 2020 estimates. For example, the differences between median income and earnings estimates using the 2020 Census-based population controls and estimates using the 2010 Census-based population controls were all less than 1.0 percent. Thus, estimates for data collected in 2021 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain population subgroups than for the total population.

¹³ For more information, refer to U.S. Census Bureau (2019d).

¹⁴ For more details on the adjustment for these comparisons, refer to U.S. Census Bureau (2019e).

In recent decades, the decennial census has usually provided all the data necessary to produce the population base used in the population controls. However, changes in disclosure avoidance practices and delays in the 2020 Census necessitated changes to the data sources that produce the base population for the Vintage 2021 population estimates. The updated population controls use a Blended Base that draws on the 2020 Census, 2020 Demographic Analysis Estimates, and Vintage 2020 Postcensal Population Estimates. Please refer to U.S. Census (2021d) for more information on this methodology.

Users should also exercise caution because of changes caused by the phase-in of the 2010 Census files (refer to "Basic CPS"). ¹⁶ During this time period, CPS data were collected from sample designs based on different censuses. Two features of the new CPS design have the potential of affecting estimates: (1) the temporary disruption of the rotation pattern from August 2014 through June 2015 for a comparatively small portion of the sample and (2) the change in sample areas. Most of the known effect on estimates during and after the sample redesign will be the result of changing from 2000 to 2010 geographic definitions.

Research has shown that the national-level estimates of the metropolitan and nonmetropolitan populations should not change appreciably because of the new sample design. However, users should still exercise caution when comparing metropolitan and nonmetropolitan estimates across years with a design change, especially at the state level.

A Nonsampling Error Warning. Since the full extent of the nonsampling error is unknown, one should be particularly careful when interpreting results based on small differences between estimates. The Census Bureau recommends that data users incorporate information about nonsampling errors into their analyses, as nonsampling error could impact the conclusions drawn from the results. Caution should also be used when interpreting results based on a relatively small number of cases. Summary measures (such as medians and percentage distributions) probably do not reveal useful information when computed on a subpopulation smaller than 75,000.

For additional information on nonsampling error, including the possible impact on CPS data, when known, refer to U.S. Census Bureau (2019c) and Brooks & Bailar (1978).

Estimation of Median Incomes. The Census Bureau has changed the methodology for computing median income over time. The Census Bureau has computed medians using either Pareto interpolation or linear interpolation. Currently, we are using linear interpolation to estimate all medians. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval.

The Census Bureau calculated estimates of median income and associated standard errors for 1979 through 1987 using Pareto interpolation if the estimate was larger than \$20,000 for people or \$40,000 for families and households. We calculated estimates of median income and associated standard errors for 1976, 1977, and 1978 using Pareto interpolation if the estimate was larger than \$12,000 for people or \$18,000 for families and households. All other estimates of median income and associated standard errors for 1976 through 2022 (2023 CPS ASEC), and almost all of the estimates of median income and associated standard errors for 1975 and earlier, were calculated using linear interpolation. Thus, use caution when comparing median incomes above \$12,000 for people or \$18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto

The phase-in process using the 2010 Census files began April 2014.

interpolation with medians calculated using linear interpolation, refer to U.S. Census Bureau (1978) and U.S. Census Bureau (1993).

Standard Errors and Their Use. A sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range about a given estimate that has a specified probability of containing the average result of all possible samples. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples, but one can say with the specified confidence that the interval includes the average estimate calculated from all possible samples.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis is that the population parameters are different. An example of this would be comparing the percentage of men who were part-time workers to the percentage of women who were part-time workers.

Tests may be performed at various levels of significance. A significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. For example, to conclude that two characteristics are different at the 0.10 level of significance, the absolute value of the estimated difference between characteristics must be greater than or equal to 1.645 times the standard error of the difference.

The Census Bureau uses 90-percent confidence intervals and 0.10 levels of significance to determine statistical validity. Consult standard statistical textbooks for alternative criteria.

The tables in *Income in the United States: 2022, Poverty in the United States: 2022*, and *Health Insurance Coverage in the United States: 2022* list estimates followed by a number labeled "Margin of Error (±)." This number can be added to and subtracted from the estimates to calculate upper and lower bounds of the 90-percent confidence interval. For example, *Health Insurance Coverage in the United States: 2022* shows the numbers for health insurance. For the statement, "7.9 percent of people were uninsured for the entire calendar year," the 90-percent confidence interval for the estimate, 7.9 percent, is 7.9 (± 0.2) percent, or 7.7 percent to 8.1 percent. 17

Note that the confidence interval here does not match the confidence interval given in Illustration 3 because the standard errors/margin of errors were calculated in two different ways. The margin of errors within the tables in the reports are calculated using direct estimates, whereas the standard errors within the illustrations later in this document are calculated using generalized variance estimates.

Estimating Standard Errors. The Census Bureau uses replication methods to estimate the standard errors of CPS and ASEC estimates. These methods primarily measure the magnitude of sampling error. However, they do measure some effects of nonsampling error as well. They do not measure systematic biases in the data associated with nonsampling error. Bias is the average over all possible samples of the differences between the sample estimates and the true value.

There are two ways to calculate standard errors for the 2023 CPS ASEC microdata file.

- 1. Direct estimates created from replicate weighting methods;
- 2. Generalized variance estimates created from generalized variance function (GVF) parameters *a* and *b*.

While replicate weighting methods provide the most accurate variance estimates, this approach requires more computing resources and more expertise on the part of the user. The GVF parameters provide a method of balancing accuracy with resource usage as well as a smoothing effect on standard error estimates. For more information on calculating direct estimates, refer to the "Replicate Weighting" section. For more information on GVF estimates, refer to the "Generalized Variance Parameters" section.

The *Income in the United States: 2022, Poverty in the United States: 2022,* and *Health Insurance Coverage in the United States: 2022* reports use replicate weights to calculate the margins of error of the estimates seen in tables and throughout the reports. In 2009, the Census Bureau released replicate weights for the 2005 through 2009 CPS ASEC collection years and has released replicate weights for each year since with the release of the CPS ASEC public use data. Since the published GVF parameters generally underestimated standard errors, standard errors produced using direct estimates may be higher than in previous reports. For most CPS ASEC estimates, the increase in standard errors from GVF to direct estimates will not alter the findings. However, marginally significant differences using the GVF may not be significant using replicate weights.

The examples in this source and accuracy statement are for guidance calculating standard errors using the generalized variance parameters. The use of generalized variance parameters is the recommended method of calculating standard errors for data users who do not have the ability to calculate the standard errors using replicate weights.

Replicate Weighting. The Census Bureau is releasing public use replicate weight files for the 2023 CPS ASEC that can be matched to the microdata files.

Replicate estimates are created using each of the 160 weights independently to create 160 replicate estimates. For point estimates, multiply the replicate weights by the item of interest at the record level (either an indicator variable to determine the number of people with a characteristic or a variable that contains some value) and tally the weighted values to create the 160 replicate estimates. Use these replicate estimates in formula (1) below to calculate the total variance for the item of interest. For example, say that the item of interest is the number of males. Tally the weights for all the records that indicated male to

create the 160 replicate estimates of the number of males. Then use these estimates in the formula to calculate the total variance for the number of males.

Calculate variance estimates for the estimates using:

$$var(\hat{\theta}_0) = \frac{4}{160} \sum_{i=1}^{160} (\hat{\theta}_i - \hat{\theta}_0)^2$$
 (1)

where $\hat{\theta}_0$ is the estimate of the statistic of interest, such as a point estimate or proportion, using the weight for the full sample, and $\hat{\theta}_i$ are the replicate estimates of the same statistic using the replicate weights. The standard error is the square root of the variance. For more information on using replicate weights and calculating direct estimates, refer to U.S. Census Bureau (2021b).

Generalized Variance Parameters. While it is possible to estimate the standard error based on the survey data for each estimate in a report, there are a number of reasons why this is not done. A presentation of the individual standard errors would be of limited use, since one could not possibly predict all of the combinations of results that may be of interest to data users. Additionally, data users have access to CPS microdata files, and it is impossible to compute in advance the standard error for every estimate one might obtain from those data sets. Moreover, variance estimates are based on sample data and have variances of their own. Therefore, some methods of stabilizing these estimates of variance, for example, by generalizing or averaging over time, may be used to improve their reliability.

Experience has shown that certain groups of estimates have similar relationships between their variances and expected values. Modeling or generalizing may provide more stable variance estimates by taking advantage of these similarities. The GVF is a simple model that expresses the variance as a function of the expected value of the survey estimate. The parameters of the GVF are estimated using direct replicate variances. These GVF parameters provide a relatively easy method to obtain approximate standard errors for numerous characteristics.

In this source and accuracy statement:

- Tables 4 through 14 provide illustrations for calculating standard errors;
- Table 15 provides the GVF parameters for labor force estimates;
- Table 16 provides GVF parameters for characteristics from the 2023 CPS ASEC;
- Tables 17 and 18 provide correlation coefficients for comparing estimates from consecutive years;
- Table 19 provides correlation coefficients between race and subgroups; and
- Tables 20 and 21 provide factors and population controls to derive state and regional parameters.

The basic CPS questionnaire records the race and ethnicity of each respondent. With respect to race, a respondent can be White, Black, Asian, American Indian and Alaskan

Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPI), or combinations of two or more of the preceding. A respondent's ethnicity can be Hispanic or non-Hispanic, regardless of race.

The GVF parameters to use in computing standard errors are dependent upon the race/ethnicity group of interest. Table 3 summarizes the relationship between the race/ethnicity group of interest and the GVF parameters to use in standard error calculations.

Table 3. Estimation Groups of Interest and Generalized Variance Parameters

Race/ethnicity group of interest	Generalized variance parameters to use in standard error calculations
Total population ^A	Total
White alone, White alone or in combination (AOIC), or White non-Hispanic population ^A	White
Black alone, Black AOIC, or Black non-Hispanic population	Black
Asian alone, Asian AOIC, or Asian non-Hispanic population	Asian, American Indian and Alaska Native (AIAN), Native Hawaiian and Other Pacific Islander (NHOPI)
AIAN alone, AIAN AOIC, or AIAN non-Hispanic population	Asian, AIAN, NHOPI
NHOPI alone, NHOPI AOIC, or NHOPI non-Hispanic population	Asian, AIAN, NHOPI
Populations from other race groups	Asian, AIAN, NHOPI
Hispanic ^B population	Hispanic ^B
Two or more races ^c – employment/unemployment and educational attainment characteristics	Black
Two or more races ^c – all other characteristics	Asian, AIAN, NHOPI

Source: U.S. Census Bureau, Current Population Survey, internal data files.

Note: The AOIC population for a race group of interest includes people reporting only the race group of interest (alone) and people reporting multiple race categories including the race group of interest (in combination).

When calculating standard errors for an estimate of interest from cross-tabulations involving different characteristics, use the set of GVF parameters for the characteristic that will give the largest standard error. If the estimate of interest is strictly from basic CPS data, the GVF parameters will come from the CPS GVF table (Table 15). If the estimate is using ASEC data, the GVF parameters will come from the ASEC GVF table (Table 16).

A For standard error calculations using parameters from the CPS GVF table (Table 15), 'Total or White' should be used.

B Hispanics may be any race.

Two or more races refers to the group of cases self-classified as having two or more races.

Standard Errors of Estimated Numbers. The approximate standard error, s_x , of an estimated number from this microdata file can be obtained by using the formula:

$$s_x = \sqrt{ax^2 + bx} \tag{2}$$

Here *x* is the size of the estimate, and *a* and *b* are the parameters in Table 15 or 16 associated with the particular type of characteristic.

Illustration 1

Suppose there were 2,665,000 unemployed females (ages 16 and up) in the civilian labor force. Table 4 shows how to use the appropriate parameters from Table 15 and Formula (2) to estimate the standard error and confidence interval.

Table 4. Illustration of Standard Errors of Estimated Numbers

	1
Number of unemployed females in the civilian labor force (<i>x</i>)	2,665,000
a-parameter (a)	-0.000028
b-parameter (b)	2,788
Standard error	85,000
90-percent confidence interval	2,525,000 to 2,805,000

Source: U.S. Census Bureau, Current Population Survey, March 2023.

The standard error is calculated as

$$s_x = \sqrt{-0.000028 \times 2,665,000^2 + 2,788 \times 2,665,000}$$

which, rounded to the nearest thousand, is 85,000. The 90-percent confidence interval is calculated as $2,665,000 \pm 1.645 \times 85,000$.

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Illustration 2

Suppose there were 62,180,000 married-couple family households. Table 5 shows how to use the appropriate parameters from Table 16 and Formula (2) to estimate the standard error and confidence interval.

Table 5. Second Illustration of Standard Errors of Estimated Numbers

Number of married-couple family households (x)	62,180,000
a-parameter (a)	-0.000012
b-parameter (b)	3,223
Standard error	392,000
90-percent confidence interval	61,540,000 to 62,820,000

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

The standard error is calculated as

$$s_x = \sqrt{-0.000012 \times 62,180,000^2 + 3,223 \times 62,180,000}$$

which, rounded to the nearest thousand, is 392,000. The 90-percent confidence interval is calculated as $62,180,000 \pm 1.645 \times 392,000$.

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the parameter from Table 15 or 16 as indicated by the numerator.

The approximate standard error, $s_{y,p}$, of an estimated percentage can be obtained by using the formula:

$$s_{y,p} = \sqrt{\frac{b}{y}p(100 - p)} \tag{3}$$

Here y is the total number of people, families, households, or unrelated individuals in the base or denominator of the percentage, p is the percentage 100*x/y ($0 \le p \le 100$), and b is the parameter in Table 15 or 16 associated with the characteristic in the numerator of the percentage.

Illustration 3

The report, *Health Insurance Coverage in the United States: 2022*, shows that there were 25,940,000 out of 330,000,000 people, or 7.9 percent, who did not have health insurance. Table 6 shows how to use the appropriate parameters from Table 16 and Formula (3) to estimate the standard error and confidence interval.

Table 6. Illustration of Standard Errors of Estimated Percentages

Percentage of people without health insurance (<i>p</i>)	7.9
Base (y)	330,000,000
b-parameter (b)	3,679
Standard error	0.09
90-percent confidence interval	7.8 to 8.0

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

The standard error is calculated as

$$s_{y,p} = \sqrt{\frac{3,679}{330,000,000} \times 7.9 \times (100.0 - 7.9)} = 0.09$$

and the 90-percent confidence interval for the estimated percentage of people without health insurance is from 7.8 to 8.0 percent (i.e., $7.9 \pm 1.645 \times 0.09$).

Standard Errors of Estimated Differences. The standard error of the difference between two sample estimates is approximately equal to

$$s_{|x_1 - x_2|} = \sqrt{s_{x_1}^2 + s_{x_2}^2 - 2rs_{x_1}s_{x_2}}$$
 (4)

where s_{x_1} and s_{x_2} are the standard errors of the estimates, x_1 and x_2 . The estimates can be numbers, percentages, ratios, etc. Tables 17 and 18 contain the correlation coefficient, r, for CPS year-to-year comparisons for CPS poverty, income, and health insurance estimates of numbers and proportions. Table 19 contains the correlation coefficient r for making comparisons between race categories that are subsets of one another. For example, to compare the number of people in poverty who listed White as their only race to the number of people in poverty who are White alone or in combination with another race, a correlation coefficient is needed to account for the large overlap between the two groups. For making other comparisons (including race overlapping where one group is not a complete subset of the other), assume that r equals zero. Making this assumption will result in accurate estimates of standard errors for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration 4

Suppose there were 28,400,000 men over age 24 who were never married and 11,000,000 men over age 24 who were divorced. The apparent difference is 17,400,000. Table 7 shows how to use Formulas (2) and (4) with r = 0 and the appropriate parameters from Table 16 to estimate the standard errors and confidence intervals.

Table 7. Illustration of Standard Errors of Estimated Differences

	Never married (x ₁)	Divorced (x2)	Difference
Number of males over age 24	28,400,000	11,000,000	17,400,000
a-parameter (a)	-0.000008	-0.000008	-
b-parameter (b)	2,754	2,754	-
Standard error	268,000	171,000	318,000
90-percent confidence	27,960,000 to	10,720,000 to	16,880,000 to
interval	28,840,000	11,280,000	17,920,000

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

The standard error of the difference is calculated as

$$s_{|x_1 - x_2|} = \sqrt{268,000^2 + 171,000^2}$$

which, rounded to the nearest thousand, is 318,000. The 90-percent confidence interval around the difference is calculated as $17,400,000 \pm 1.645 \times 318,000$. Since this interval does not include zero, we can conclude with 90-percent confidence that the number of never-married men over age 24 was higher than the number of divorced men over age 24.

Illustration 5

The report, *Poverty in the United States: 2022,* shows that 11,150,000 out of 72,940,000 children, or 15.3 percent, were reported as in poverty in 2021, and that 10,780,000 out of 71,950,000, or 15.0 percent, were in poverty in 2022. The apparent difference is 0.3 percent. Table 8 shows how to use the appropriate parameters from Table 16 and Formulas (3) and (4) to estimate the standard error and confidence interval.

Table 8. Second Illustration of Standard Errors of Estimated Differences

	2021 (x ₁)	2022 (x ₂)	Difference
Percentage of children in poverty (p)	15.3	15.0	0.3
Base (y)	72,940,000	71,950,000	-
b-parameter (b)	3,757 ^A	4,295	-
Correlation coefficient (r)	-	-	0.45
Standard error	0.26	0.28	0.28
90-percent confidence interval	14.9 to 15.7	14.5 to 15.5	-0.2 to 0.8

Source: U.S. Census Bureau, Current Population Survey, 2022-2023 Annual Social and Economic Supplement.

A This value comes from the Source and Accuracy Statement for the 2022 Annual Social and Economic Supplement, Appendix G, Table 16 in U.S. Census Bureau (2022b). For additional information, refer to the "Year-to-Year Factors" section.

The standard error of the difference is calculated as

$$s_{|x_1-x_2|} = \sqrt{0.26^2 + 0.28^2 - 2 \times 0.45 \times 0.26 \times 0.28} = 0.28$$

and the 90-percent confidence interval around the difference is calculated as $0.3 \pm 1.645 \times 0.28$. Since this interval includes zero, we conclude with 90-percent confidence that the percentage of children in poverty in 2021 is not significantly different than the percentage of children in poverty in 2022.

Standard Errors of Estimated Ratios. Certain estimates may be calculated as the ratio of two numbers. Compute the standard error of a ratio, x/y, using

$$s_{x/y} = \frac{x}{y} \sqrt{\left(\frac{s_x}{x}\right)^2 + \left(\frac{s_y}{y}\right)^2 - 2r\frac{s_x s_y}{xy}} \tag{5}$$

The standard error of the numerator, s_x , and that of the denominator, s_y , may be calculated using formulas described earlier. In Formula (5), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of people in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the average number of children per family with children.

For all other types of ratios, r is assumed to be zero. Examples are the average number of children per family and the family poverty rate. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio.

Note: For estimates expressed as the ratio of *x* per 100 *y* or *x* per 1,000 *y*, multiply Formula (5) by 100 or 1,000, respectively, to obtain the standard error.

Illustration 6

Suppose there were 11,040,000 males working part-time and 17,500,000 females working part-time. The ratio of males working part-time to females working part-time would be 0.631 or 63.1 percent. Table 9 shows how to use the appropriate parameters from Table 15 and Formulas (2) and (5) with r = 0 to estimate the standard errors and confidence intervals.

Table 9. Illustration of Standard Errors of Estimated Ratios

	Males (x)	Females (y)	Ratio
Number who work part-time	11,040,000	17,500,000	0.631
a-parameter (a)	-0.000031	-0.000028	-
b-parameter (b)	2,947	2,788	-
Standard error	170,000	201,000	0.0121
90-percent confidence interval	10,760,000 to 11,320,000	17,170,000 to 17,830,000	0.611 to 0.651

Source: U.S. Census Bureau, Current Population Survey, March 2023.

The standard error is calculated as

$$s_{x/y} = \frac{11,040,000}{17,500,000} \sqrt{\left(\frac{170,000}{11,040,000}\right)^2 + \left(\frac{201,000}{17,500,000}\right)^2} = 0.0121$$

and the 90-percent confidence interval is calculated as $0.631 \pm 1.645 \times 0.0121$.

Illustration 7

The report, *Poverty in the United States:* 2022, shows that the number of families below the poverty level, x, was 7,400,000 and the total number of families, y, was 84,350,000. The ratio of families below the poverty level to the total number of families would be 0.088 or 8.8 percent. Table 10 shows how to use the appropriate parameters from Table 16 and Formulas (2) and (5) with r = 0 to estimate the standard errors and confidence intervals.

	Table 10. Sec	ond Illustration	of Standard E	Errors of Estimated Ratio	S
--	---------------	------------------	---------------	---------------------------	---

	In poverty (x)	Total (y)	Ratio (in percent)
Number of families	7,400,000	84,350,000	8.8
a-parameter (a)	0.000183	-0.000012	-
b-parameter (b)	5,660	3,223	-
Standard error	228,000	432,000	0.27
90-percent confidence interval	7,025,000 to 7,775,000	83,640,000 to 85,060,000	8.4 to 9.2

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

The standard error is calculated as

$$s_{x/y} = \frac{7,400,000}{84,350,000} \sqrt{\left(\frac{228,000}{7,400,000}\right)^2 + \left(\frac{432,000}{84,350,000}\right)^2} = 0.0027 = 0.27\%$$

and the 90-percent confidence interval of the percentage is calculated as $8.8 \pm 1.645 \times 0.27$.

<u>Standard Errors of Estimated Medians</u>. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (Refer to the "Standard Errors and Their Use" section for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure:

- 1. Using Formula (3) and the base of the distribution, calculate the standard error of 50 percent.
- 2. Add to and subtract from 50 percent the standard error determined in step 1. These two numbers are the percentage limits corresponding to the 68-percent confidence interval about the estimated median.
- 3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.

Note: The percentage limits found in step 2 may or may not fall in the same characteristic distribution interval.

Use the following formula to calculate the upper and lower limits:

$$X_p = \frac{pN - N_1}{N_2 - N_1} (A_2 - A_1) + A_1 \tag{6}$$

where

 X_p = estimated upper and lower bounds for the confidence interval $(0 \le p \le 1)$. For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_p estimates the median when p = 0.50.

 $N = \frac{\text{for distribution of numbers}}{\text{households, etc.}}$ for the characteristic in the distribution.

= <u>for distribution of percentages</u>: the value 100.

p = the values obtained in Step 2.

 A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_p .

 N_1 , N_2 = for distribution of numbers: the estimated number of units (people, households, etc.) with values of the characteristic less than or equal to A_1 and A_2 , respectively.

- = $\frac{\text{for distribution of percentages}}{\text{the estimated percentage of units (people, households, etc.)}}$ having values of the characteristic less than or equal to A_1 and A_2 , respectively.
- 4. Divide the difference between the two points determined in step 3 by 2 to obtain the standard error of the median.

Note: Median incomes and their standard errors calculated as below may differ from those in published tables and reports showing income, since narrower income intervals were used in those calculations.

Illustration 8

The report, *Income in the United States: 2022*, shows that there were 131,400,000 households, and their income was distributed as shown in Table 11.

Cumulative number of Number of Cumulative percent households households of households Income level Under \$5.000 4,305,000 4,305,000 3.28% \$5,000 to \$9,999 2,131,000 6,436,000 4.90% \$10,000 to \$14,999 4,536,000 10,970,000 8.35% \$15,000 to \$24,999 9,772,000 20,740,000 15.78% \$25,000 to \$34,999 10,010,000 30,750,000 23.40% \$35,000 to \$49,999 13,890,000 44,640,000 33.97% \$50,000 to \$74,999 21,320,000 65,960,000 50.20% \$75,000 to \$99,999 16,210,000 82,170,000 62.53% \$100,000 and over 49,260,000 131,400,000A 100.00% A

Table 11. Distribution of Household Income for Illustration 8

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

- 1. Using Formula (3) with $b = 4{,}327$ from Table 16, the standard error of 50 percent on a base of 131,400,000 is about 0.29 percent.
- 2. To obtain a 68-percent confidence interval on an estimated median, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.71 and 50.29.
- 3. The lower and upper limits for the interval in which the percentage limits falls are \$50,000 and \$100,000, respectively.

Then the estimated numbers of households with an income less than or equal to \$50,000 and \$100,000 are 44,640,000 and 82,170,000, respectively.

Using Formula (6), the lower limit for the confidence interval of the median is found to be about (rounded to four significant digits)

$$X_{0.4971} = \frac{0.4971 \times 131,400,000 - 44,640,000}{82,170,000 - 44,640,000} (100,000 - 50,000) + 50,000 = 77,550$$

Similarly, the upper limit is found to be about

$$X_{0.5029} = \frac{0.5029 \times 131,400,000 - 44,640,000}{82,170,000 - 44,640,000} (100,000 - 50,000) + 50,000 = 78,570$$

Thus, a 68-percent confidence interval for the median income for households is from \$77,550 to \$78,570.

4. The standard error of the median is, therefore,

$$\frac{78,570 - 77,550}{2} = 510.0$$

A May not sum to totals due to rounding.

<u>Accuracy of State Estimates</u>. The redesign of the CPS following the 1980 census provided an opportunity to increase efficiency and accuracy of state data. All strata are now defined within state boundaries. The sample is allocated among the states to produce state and national estimates with the required accuracy while keeping total sample size to a minimum. Improved accuracy of state data was achieved with about the same sample size as in the 1970 design.

Since the CPS is designed to produce both state and national estimates, the proportion of the total population sampled and the sampling rates differ among the states. In general, the smaller the population of the state the larger the sampling proportion. For example, in Vermont, approximately 1 in every 250 households is sampled each month. In New York, the sample is about 1 in every 2,000 households. Nevertheless, the size of the sample in New York is four times larger than in Vermont because New York has a larger population.

Note: The Census Bureau recommends the use of 3-year averages to compare estimates across states and 2-year averages to evaluate changes in state income and poverty estimates over time. Refer to the "Standard Errors of Data for Combined Years" section. Further, the *Income in the United States* and *Poverty in the United States* reports no longer present state estimates. Therefore, the Census Bureau recommends the American Community Survey (ACS) microdata file as the preferred source for income and poverty state data in years 2006 (2005 estimates) to the present. A questionnaire redesign introduced with the 2014 CPS ASEC and an updated processing system introduced with the 2019 CPS ASEC each mark the start of new time series for health insurance estimates in the CPS ASEC, so data users should not create multiyear averages across these years.

Standard Errors of State Estimates. The standard error for a state may be obtained by determining new state-level a- and b-parameters and then using these adjusted parameters in the standard error formulas mentioned previously. To determine a new state-level b-parameter (b_{state}), multiply the b-parameter from Table 15 or 16 by the state factor from Table 20. To determine a new state-level a-parameter (a_{state}), use the following:

- (1) If the a-parameter from Table 15 or 16 is positive, multiply it by the state factor from Table 20.
- (2) If the a-parameter in Table 15 or 16 is negative, calculate the new state-level a-parameter as follows:

$$a_{state} = \frac{-b_{state}}{POP_{state}} \tag{7}$$

where *POP*_{state} is the state population found in Table 20.

¹⁸ For additional information on the American Community Survey, please refer to U.S. Census Bureau (2022a).

Illustration 9

Suppose there were 14,490,000 people living in New York state who were born in the United States. Table 12 shows how to use Formulas (2) and (7) and the appropriate parameter, factor, and population from Tables 16 and 20 to estimate the standard error and confidence interval.

Table 12. Illustration of Standard Errors of State Estimates

Tubic 12: Indiction of blandard Errorb of blate Estimates		
Number of people in New York born in the U.S. (x)	14,490,000	
b-parameter (b)	2,754	
New York state factor	1.19	
State population	19,390,083	
State b-parameter (b_{state})	3,277	
State a-parameter (a_{state})	-0.000169	
Standard error	110,000	
90-percent confidence interval	14,310,000 to 14,670,000	

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

Obtain the state-level b-parameter by multiplying the b-parameter, 2,754 by the state factor, 1.19. This gives $b_{state} = 2,754 \times 1.19 = 3,277$. Obtain the needed state-level aparameter by

$$a_{state} = \frac{-3,277}{19,390,083} = -0.000169$$

The standard error of the estimate of the number of people in New York state who were born in the United States can then be found by using Formula (2) and the new state-level *a*-and *b*- parameters, -0.000169 and 3,277, respectively. The standard error is given by

$$s_x = \sqrt{-0.000169 \times 14,490,000^2 + 3,277 \times 14,490,000}$$

which, rounded to the nearest thousand, is 110,000.

Standard Errors of Regional Estimates. To compute standard errors for regional estimates, follow the steps for computing standard errors for state estimates found in "Standard Errors for State Estimates" using the regional factors and populations found in Table 21.

Illustration 10

The report, *Poverty in the United States: 2022*, shows that there were 16,830,000 of 127,622,741 people, or 13.2 percent, living in poverty in the South. Table 13 shows how to use Formulas (3) and (7) and the appropriate parameter, factor, and population from Tables 16 and 21 to estimate the standard error and confidence interval.

Table 13. Illustration of Standard Errors of Regional Estimates

Poverty rate in the South (p)	13.2
Base (y)	127,622,741
b-parameter (b)	3,907
South regional factor	1.13
Regional b-parameter (b _{region})	4,415
Standard error	0.20
90-percent confidence interval	12.9 to 13.5

Source: U.S. Census Bureau, Current Population Survey, 2023 Annual Social and Economic Supplement.

Obtain the region-level b-parameter by multiplying the b-parameter, 3,907, by the South regional factor, 1.13. This gives $b_{region} = 3,907 \times 1.13 = 4,415$.

The standard error of the estimate of the poverty rate for people living in the South can then be found by using Formula (3) and the new region-level b-parameter, 4,415. The standard error is given by

$$s_{y,p} = \sqrt{\frac{4,415}{127,622,741} \times 13.2 \times (100 - 13.2)} = 0.20$$

and the 90-percent confidence interval of the poverty rate for people living in the South is calculated as $13.2 \pm 1.645 \times 0.20$.

<u>Standard Errors of Groups of States</u>. The standard error calculation for a group of states is similar to the standard error calculation for a single state. First, calculate a new state group factor for the group of states. Then, determine new state group a- and b-parameters. Finally, use these adjusted parameters in the standard error formulas mentioned previously.

Use the following formula to determine a new state group factor:

state group factor =
$$\frac{\sum_{i=1}^{n} POP_{i} \times state \ factor_{i}}{\sum_{i=1}^{n} POP_{i}}$$
 (8)

where POP_i and $state\ factor_i$ are the population and factor for state i from Table 20. To obtain a new state group b-parameter ($b_{state\ group}$), multiply the b-parameter from Table 15 or 16 by the state group factor obtained by Formula (8). To determine a new state group aparameter ($a_{state\ group}$), use the following:

- (1) If the a-parameter from Table 15 or 16 is positive, multiply it by the state group factor determined by Formula (8).
- (2) If the a-parameter in Table 15 or 16 is negative, calculate the new state group a-parameter as follows:

$$a_{state\ group} = \frac{-b_{state\ group}}{\sum_{i=1}^{n} POP_i}$$
 (9)

Illustration 11

Suppose the state group factor for the state group Illinois-Indiana-Michigan was required. The appropriate factor would be

$$state\ group\ factor = \frac{12,364,599 \times 1.17 + 6,762,691 \times 1.11 + 9,932,547 \times 1.11}{12,364,599 + 6,762,691 + 9,932,547} = 1.14$$

<u>Standard Errors of Data for Combined Years</u>. Sometimes estimates for multiple years are combined to improve precision. For example, suppose \overline{x} is an average derived from n consecutive years' data, i.e., $\overline{x} = \sum_{i=1}^{n} \frac{x_i}{n}$, where the x_i are the estimates for the individual years. Use the formulas described previously to estimate the standard error, s_{x_i} , of each year's estimate. Then the standard error of \overline{x} is

$$S_{\bar{x}} = \frac{S_X}{n} \tag{10}$$

where

$$s_{x} = \sqrt{\sum_{i=1}^{n} s_{x_{i}}^{2} + 2r \sum_{i=1}^{n-1} s_{x_{i}} s_{x_{i+1}}}$$
(11)

and s_{x_i} are the standard errors of the estimates x_i . Tables 17 and 18 contain the correlation coefficients, r, for the correlation between consecutive years i and i+1. Correlation between nonconsecutive years is zero. The correlations were derived for income, poverty, and health insurance estimates, but they can be used for other types of estimates where the year-to-year correlation between identical households is high.

The Census Bureau recommends the use of 3-year average estimates for certain small population subgroups. ¹⁹ (refer also to the "Accuracy of State Estimates" section). Two-year moving averages are recommended for these small population subgroups for comparisons across adjacent years.

¹⁹ Estimates of characteristics of the American Indian and Alaska Native (AIAN) and Native Hawaiian and Other Pacific Islander (NHOPI) populations based on a single-year sample would be unreliable due to the small size of the sample that can be drawn from either population. Accordingly, such estimates are based on multiyear averages.

Illustration 12

The report, *Poverty in the United States: 2022*, provides the percentages of families in poverty. Suppose the 2020-2022 ²⁰ 3-year average percentage of families with female householder, no spouse present, in poverty was 23.2. Suppose the percentages and bases for 2020, 2021, and 2022 were 23.5, 23.0, and 23.0 percent and 15,460,000, 15,620,000, and 15,040,000, respectively. Table 14 shows how to use the appropriate parameters and correlation coefficients from Tables 16 and 18 and Formulas (3), (10), and (11) to estimate the standard error and confidence interval.

T-1.1. 44 III	
Table 14. Illustration of Standard Errors of Data for Combined Yea	rc

	2020	2021	2022	2020-2022 Average
Percentage of families with female				
householder, no spouse				
present, in poverty (p)	23.5	23.0	23.0	23.2
Base (y)	15,460,000	15,620,000	15,040,000	-
b-parameter (b)	3,132 ^A	5,073 ^B	5,660	-
Correlation (r)	-	-	-	0.35
Standard error	0.60	0.76	0.82	0.51
90-percent confidence interval	22.5 to 24.5	21.7 to 24.3	21.7 to 24.3	22.4 to 24.0

Source: U.S. Census Bureau, Current Population Survey, 2021-2023 Annual Social and Economic Supplement.

The standard error of the 3-year average is calculated as

$$s_{\bar{x}} = \frac{1.54}{3} = 0.51$$

where

$$s_x = \sqrt{0.60^2 + 0.76^2 + 0.82^2 + (2 \times 0.35 \times 0.60 \times 0.76) + (2 \times 0.35 \times 0.76 \times 0.82)} = 1.54$$

The 90-percent confidence interval for the 3-year average percentage of families with a female householder, no spouse present, in poverty is $23.2 \pm 1.645 \times 0.51$.

<u>Standard Errors of Quarterly or Yearly Averages</u>. For information on calculating standard errors for labor force data from the CPS which involve quarterly or yearly averages, please refer to Bureau of Labor Statistics (2006).

A This value comes from the Source and Accuracy Statement for the 2021 Annual Social and Economic Supplement, Appendix G, Table 19 in U.S. Census Bureau (2021a). For additional information, refer to the "Year-to-Year Factors" section.

^B This value comes from the Source and Accuracy Statement for the 2022 Annual Social and Economic Supplement, Appendix G, Table 16 in U.S. Census Bureau (2022b). For additional information, refer to the "Year-to-Year Factors" section.

The estimates for data year 2020 come from the 2021 CPS ASEC Files and reflect 2020 Census-based controls, and may differ from previously published data year 2020 estimates that reflect 2010 Census-based controls. The estimates for data year 2021 come from the 2022 CPS ASEC Files and reflect 2020 Census-based controls. Please refer to the "Change in Census-Based Controls" subsection of the "Comparability of Data" section.

<u>Year-to-Year Factors</u>. In past years, the Census Bureau published a table of year factors for the CPS ASEC Supplement in the Source and Accuracy Statement. User demand for these factors has diminished with the introduction of replicate weights. Data users producing estimates from prior years should consult the Source and Accuracy Statements covering the years of their analysis to estimate standard errors.

<u>Technical Assistance</u>. If you require assistance or additional information, please contact the Demographic Statistical Methods Division via e-mail at <u>dsmd.source.and.accuracy@census.gov</u>.

Table 15. Parameters for Computation of Standard Errors for Labor Force Characteristics:

March 2023

Characteristic	а	b
Total or White		
Civilian labor force, employed	-0.000013	2,481
Not in labor force	-0.000013	2,432

Source: U.S. Census Bureau, Internal Current Population Survey data files for the 2010 Design.

Notes: These parameters are to be applied to basic CPS monthly labor force estimates. The Total or White, Black, and Asian, AIAN, NHOPI parameters are to be used for both alone and in combination race group estimates. For same-sex households, multiply the a- and b-parameters by 1.3. For nonmetropolitan characteristics, multiply the a- and b-parameters by 1.5. If the characteristic of interest is total state population, not subtotaled by race or ethnicity, the a- and b-parameters are zero. For foreign-born and noncitizen characteristics for Total and White, the a- and b-parameters should be multiplied by 1.3. No adjustment is necessary for foreign-born and noncitizen characteristics for Black, Hispanic, and Asian, AIAN, NHOPI parameters. For the groups self-classified as having two or more races, use the Asian, AIAN, NHOPI parameters for all employment characteristics.

Source: U.S. Census Bureau, Current Population Survey, External data from the 2023 Annual Social and Economic Supplement.

^A AIAN is American Indian and Alaska Native, and NHOPI is Native Hawaiian and Other Pacific Islander.

^B Hispanics may be any race.

Notes: These parameters are to be applied to the 2023 Annual Social and Economic Supplement data. The White, Black, and Asian, AIAN, NHOPI parameters are calculated using the non-hispanic population, but are to be used for both alone and in combination race group estimates. For same-sex households, multiply the a- and b-parameters by 1.3. For nonmetropolitan characteristics, multiply the a- and b-parameters by 1.5. If the characteristic of interest is total state population, not subtotaled by race or ethnicity, the a- and b-parameters are zero. For foreign-born and noncitizen characteristics for Total and White, the a- and b-parameters should be multiplied by 1.3. No adjustment is necessary for foreign-born and noncitizen characteristics for Black, Asian, AIAN, NHOPI, and Hispanic parameters. For the group self-classified as having two or more races, use the Asian, AIAN, NHOPI parameters for all characteristics except employment, unemployment, and educational attainment, in which case use Black parameters. For a more detailed discussion on the use of parameters for race and ethnicity, please refer to the "Generalized Variance Parameters" section.

Table 17. Current Population Survey Year-to-Year Correlation Coefficients for Income and Health Insurance Characteristics: Data Years 1960 to 2022

Characteristics		2000 (basic) expanded)-2022		9 (basic)- (expanded)
	People	Families	People	Families
Total	0.30	0.35	0.19	0.22
White	0.30	0.35	0.20	0.23
Black	0.30	0.35	0.15	0.18
Other	0.30	0.35	0.15	0.17
Hispanic ^A	0.45	0.55	0.36	0.28

APPENDIX J

HISTORICAL FILE INFORMATION

Initial releases

A public use edition of the Current Population Survey, ASEC file, formerly known as the March file were originally available for 1976, 1978, and 1979. For 1980, 1984, and 1988 two files were available for each year. The first 1980 file contains estimates based on 1970 population counts and should be used for historical comparisons ending in 1980. The reweighted 1980 file contains estimates based on results of the 1980 census and should be used for comparisons between 1981 and 1984.

1980s

In 1984, the Bureau of the Census introduced a step into the second stage weighting procedure to control individual weights to independent estimates of the Hispanic population. Since this introduction caused a major disruption in the Hispanic estimates, two data files were created. The first file, without the Hispanic controls should be used for comparing estimates for years prior to 1984 and the second file should be used for comparison with 1985 and later files.

From March 1989 forward, March data are processed using the rewrite system. The rewrite system includes revised procedures to match supplement records to basic CPS records; revised weighting procedures; revised demographic and family edits; revised imputation procedures; and more income detail on the file.

For March 1988, there are two files: the regular Annual Demographic File and the Annual Demographic Rewrite File. The rewrite file has been prepared to allow historical comparison of data from the rewrite processing system implemented between 1988 and 1989. It is recommended that the rewrite file be used when comparing data collected from the March Annual Demographic Supplement from 1988 forward. Use the regular file, released in 1988, when comparing data from 1988 and prior years.

This is not to say, however, that comparisons cannot be made between years before and after 1988. When such analyses are done, for example between 1986 through 1989, data users must consider that similarities or differences between the data may be caused or effected by the rewritten system. Thus, comparing estimates

from the 1988 rewrite files and the 1988 regular file will reveal the extent of any differences caused by the processing system changes though not the specific change. The magnitude of the difference can then be applied to the estimates from 1986 and 1989 to reveal whether any real differences exist. There were several revisions made to the processing programs; therefore, it is difficult to determine which specific revision effected the differences or similarities in the data.

Some non-March data also are available from 1994 to present. For information about the Current Population Survey and Supplement Surveys, be sure to visit our online CPS home page at https://www.census.gov/programs-surveys/cps.html where you can search our knowledge base and submit questions.

2010s

In 2014, the Current Population Survey Annual Social and Economic Supplement (CPS ASEC) included redesigned questions for income and health insurance coverage, followed by changes being phased in beginning in 2015 to allow spouses and unmarried partners to specifically identify as opposite- or same-sex. While data from the updated collection methods were released on schedule, data processing changes to take advantage of the new content were available starting with the 2019 file.

In 2019, a redesigned processing system for the ASEC supplement was implemented. This new processing system had updates concerning three topics, same-sex/opposite-sex families, income & poverty, and health insurance.

First, the relationship to householder measure (PERRP) divides spouse and unmarried categories into opposite-sex and same-sex groups (i.e., opposite-sex spouse/husband/wife, same-sex spouse/husband/wife, opposite-sex unmarried partner, and same-sex unmarried partner). Second, the parent identification variables have changed from respondents identifying a mother and father in the household (PELNMOM, PELNDAD) to identifying a

APPENDIX J

HISTORICAL FILE INFORMATION

parent and another parent (PEPAR1, PEPAR2). This allows easy reporting of children living with two mothers or two fathers.

For income and poverty, the updated processing system includes edits to take full advantage of the redesigned questionnaire. For example, several variables were added for defined-benefit pension income and defined-contribution withdrawals (such as from 401(k) plans) to replace the previous variables on retirement income. The imputation system was updated to make use of income ranges provided by some non-respondents as well as to increase the number of characteristics used in the imputation models.

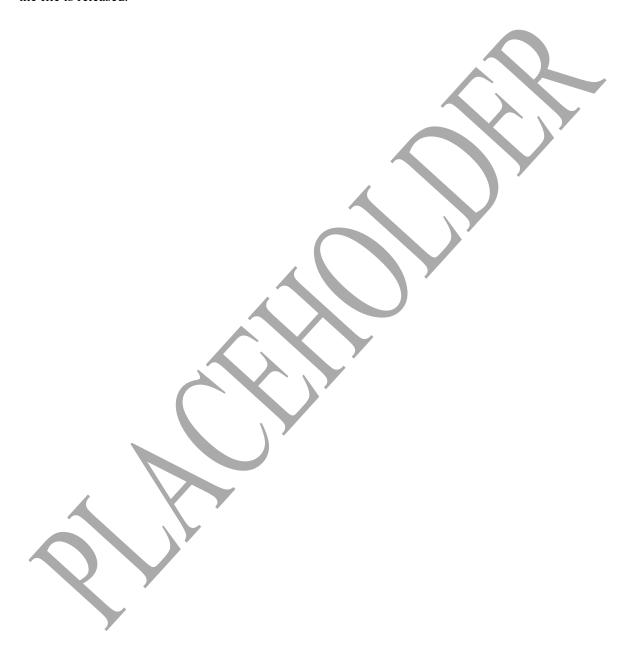

The updated processing system includes a number of changes to CPS ASEC health insurance data that better integrate detailed information from the 2014 questionnaire redesign. For example, the processing system introduces a new method of estimating coverage that builds from subannual estimates to determine whether a person was covered at any point in the previous calendar year. It also refines the methods by which missing and incomplete data are imputed and in which inconsistent information is handled. Finally, the file also includes additional information about types of coverage held at the time of survey and details about Marketplace coverage that were not previously available.

A more detailed explanation of these processing changes can be found in the blog "RESEARCH MATTERS: CPS ASEC Redesign and Processing Changes" at https://www.census.gov/newsroom/blogs/researc h-matters/2019/09/cps-asec.html.
