## NOTE

Questions about the design, data collection, and CPS-specific subject matter should be directed to Tim Marshall, Associate Directorate Demographic Programs, U.S. Census Bureau, Washington, D.C. 20233. Phone: (301) 763-3806.

Questions about the TUS subject matter should be directed to the National Cancer Institute's Division of Cancer Control and Population Sciences, Behavior Research Program at ncidccpsbrpadvances@mail.nih.gov

#### Abstract

The National Cancer Institute (NCI) of the National Institutes of Health (NIH) and the U.S. Food and Drug Administration (FDA) sponsored a Tobacco Use Supplement (TUS) to the Current Population Survey (CPS) conducted by the U. S. Census Bureau. - Washington: U. S. Census Bureau [producer and distributor], September 2022.

## Type of File:

Microdata; unit of observation is person.

## Universe Description:

For September 2022, the universe is person level for all persons aged 18 and above (prior to 2007 TUS also included those 15-17 years old) in the civilian noninstitutional population of the United States and completed the labor force interview.

The probability sample selected to represent the universe consisted of 42,978 households.
The supplement universe has the following conditions:

- HRINTSTA $=1$
- PRPERTYP = 2
- PRTAGE greater than or equal to 18
- HRMIS in 1, 2, 3, 4, 5, 6, 7, 8
- PEELGFLG $=1$

Questionnaire Structure: The supplement is structured in Sections A through K (except I)

- Section A screened for prior cigarette usage and current usage status of every day smoker, some days smoker, former smoker (now "not at all" smoking), and never smoker ("never" being defined as "not having smoked 100 cigarettes in one's lifetime").
- Section B detailed smoking history and current use patterns questions were asked if the person had smoked 100 cigarettes and is a self- respondent currently smoking every day.
- Section C detailed smoking history and current use patterns questions were asked if the person had smoked 100 cigarettes and is a self- respondent currently smoking some days.
- Section D asked self respondent current "every day" and "some day" smokers questions about quit smoking attempts of the past 12 months, and if none, asked if ever quit.
- Section E asked self respondent current every day and some-day smokers about a set of methods used (quit lines, internet or web-based tools or Apps, switching to other tobacco products, nicotine replacement therapy, prescription antidepressants used for cessation treatment, counseling, classes and support groups) during the most recent quit attempt within the past 12 months.
- Section F asked self respondent current every day and some-day smokers about medical (often in past also dental, but not in 2018-19, 2022-23 series) doctor advice to stop smoking.
- Section G asked self respondent current every day and some-day smokers about the person's interest, likelihood, and confidence in quitting within the next 6 months.
- Section H questions were asked of self respondent former smokers (if the person had smoked 100 cigarettes, is a self-respondent and currently not smoking at all); similar questions asked of current smokers in Sections B, C, E, and F.
- Section J asked all respondents about ever and current use of other tobacco products (cigars, regular pipes, hookah pipes, e-cigarettes, smokeless tobacco, nicotine pouches and Heated Tobacco Products (HTP)) and asked ONLY self-respondents more detailed items about other tobacco product use.
- Section K asked self-respondents about indoor smoke-free and vape-free policies at work and at home, attitudes towards smoking in different places including in multi-unit housing. Also included is an item on awareness of tobacco industry corrective statements mandated by a federal judge.

## Subject-Matter Description:

Data are provided on labor force activity for the week prior to the survey. Comprehensive data are available on the employment status, occupation, and industry of persons 15 years old and over. Also shown are demographic characteristics such as age, sex, race, Hispanic origin, marital status, veteran status, immigration status, household relationship, educational background, and some daily living functional status items.

The Tobacco Use questions were asked for randomly selected household members aged

18 years and older in September 2022. A feature, began in 2014-15 and continuing in the 2022-2023 cycle, included random selection of respondents in larger households to reduce respondent burden. If the household had only 1 or 2 supplement eligible members, then those persons were selected for interview. If the household had 3 or 4 supplement eligible members, then 2 of them were randomly selected for interview. If the household had more than 4 supplement eligible members, then 3 of them were randomly selected for interview.

For those supplement eligible persons NOT randomly selected, no supplement questions were asked, not even a proxy-response interview.

Self-response was attempted for all eligible persons selected. A proxy interview was allowed after four callbacks to attempt a self-response. Those selected for self interview who were interviewed were eligible for the entire supplement, whereas proxy respondents standing in for those self-selected ones were only given an abbreviated interview.

## Geographic Coverage:

Geography data are provided at the State level and some sub-state levels for specific metropolitan identifiers (Attachment 11).

## Technical Description:

File Structure: Rectangular.
File Size: $127,192^{1}$ logical person records; 1,675 character logical record length. There are 79,723 total supplement eligible records for September 2022.
File Sort Sequence: The file is sorted by State (GESTFIPS) by household identification number by line number.

## File Availability:

The data contained herein are for the first of the three months of the data collected for the 2022-2023 TUS wave. The main data files, technical documentation, and replicate weight files are all available for download at https://www.census.gov/programs-surveys/cps/technical-documentation/complete.html and will also be available directly from the NCI sponsor's site at https:// cancercontrol.cancer.gov/brp/tcrb/tuscps/questionnaires.html.

An updated NCI TUS-CPS harmonized dataset to include data from 1992 through 2019 will be available soon. Please check the TUS website for updates and to sign-up for the TUS notifications listserv at https://cancercontrol.cancer.gov/brp/tcrb/tuscps/index.html.

The NCI TUS-CPS Management Team has developed the 2022-2023 Tobacco Use Supplement to the Current Population Survey (TUS-CPS) User Guide for Conducting
Weighted Analyses, which includes specific information and guidance on obtaining properly weighted statistics and appropriate variance estimates using the 2022-2023 data, and features illustrative examples of different types of analyses, including statistical code in both SAS and SAS-Callable SUDAAN. This user guide is available at https://cancercontrol.cancer.gov/brp/ tcrb/tus-cps/questionnaires-data\#2018

## ATTACHMENT 2

## OVERVIEW

Current Population Survey

## Introduction

The Current Population Survey (CPS) is the source of the official government statistics on employment and unemployment. The CPS has been conducted monthly for over 60 years. Currently, we obtain interviews from about 54,000 households monthly, scientifically selected on the basis of area of residence to represent the nation as a whole, individual states, and other specified areas. Each household is interviewed once a month for four consecutive months one year, and again for the corresponding time period a year later. This technique enables us to obtain reliable month-to-month and year-to-year comparisons at a reasonable cost while minimizing the inconvenience to any one household.

Although the main purpose of the survey is to collect information on the employment situation, a very important secondary purpose is to collect information on demographic characteristics such as age, sex, race, marital status, educational attainment, family relationship, occupation, and industry. From time to time, additional questions are included on health, education, income, and previous work experience. The statistics resulting from these questions serve to update similar information collected once every 10 years through the decennial census, and are used by government policymakers and legislators as important indicators of our nation's economic situation and forplanning and evaluating many government programs.

The CPS provides current estimates of the economic status and activities of the population of the United States. Because it is not possible to develop one or two overall figures (such as the number of unemployed) that would adequately describe the whole complex of labor market phenomena, the CPS is designed to provide a large amount of detailed and supplementary data. Such data are made available to meet a wide variety of needs on the part of users of labor marketinformation.

Thus, the CPS is the only source of monthly estimates of total employment (both farm and nonfarm); nonfarm selfemployed persons, domestics, and unpaid helpers in nonfarm family enterprises; wage and salaried employees; and, finally, estimates of total unemployment.

It provides the only available distribution of workers by the number of hours worked (as distinguished from aggregate or average hours for an industry), permitting separate analyses of part-time workers, workers on overtime, etc. The survey is also the only comprehensive current source of information on the occupation of workers and the industries in which they work. Information is available from the survey not only for persons currently in the labor force but also for those who are outside the labor force. The characteristics of such persons whether married women with or without young children, disabled persons, students, older retired workers, etc., can be determined. Information on their current desire for work, their past work experience, and their intentions as to job seeking are also available.

For a more detailed discussion about the basic labor force data gathered on a monthly basis in the CPS survey, see "Explanatory Notes and Estimates of Error" in any recent issue of the Employment and Earnings, a Bureau of Labor Statistics periodical. This source is referred to on the next page.

## CPS Sample Design

The Current Population Survey (CPS) is a monthly survey designed primarily to produce national and state estimates of labor force characteristics of the civilian noninstitutional population (CNP) 16 years of age and older. It is conducted in approximately 60,000 eligible housing units throughout the United States. (Note: 'Eligible'can be simplistically defined as an occupied housing unit having at least one person in the CNP.) This sample includes 10,000 eligible housing units from the monthly supplementary sample to improve state-level estimates of health insurance coverage for low-income children, also known as the CHIP expansion. This supplementary sample has been part of the official CPS since July 2001. Thirty-two states plus the District of Columbia contain this supplementary sample each month.

The CPS sample is based on information from the 2010 Decennial Census, in accordance with usual practice. Historically, the CPS sample has been redesigned after each Decennial Census.

The CPS sample is a probability sample based on a stratified two-stage sampling scheme: selection of sample primary sampling units (PSUs) and selection of sample housing units within those PSUs. In general, the CPS sample is selected from lists of addresses obtained from the Master Address File (MAF) with updates from the United States Postal Service (USPS) twice a year. The MAF is the Census Bureau's permanent list of addresses, including their geographic locations, for individual living quarters. It is continuously maintained through partnerships with the USPS; with Federal, State, regional, and local agencies; and with the private sector, and it is used as a sample frame by many Census Bureau demographic surveys.

Approximately 72,000 housing units are assigned for interview each month, of which about 60,000 are occupied and thus eligible for interview. The remainder are units found to be destroyed, vacant, converted to nonresidential use, containing persons whose usual place of residence is elsewhere, or ineligible for other reasons. Of the 60,000 occupied housing units, approximately 10 percent are not interviewed in a given month due to temporary absence (vacation, etc.), the residents are not found at home after repeated attempts, inability of persons contacted to respond, unavailability for other reasons, and refusals to cooperate. The interviewed households contain approximately 108,000 persons 15 years old and over, approximately 27,000 children 0-14 years old, and about 450 Armed Forces members living with civilians either on or off base within these households. A more precise explanation regarding the CPS sample design is provided in "Explanatory Notes and Estimates of Error: Household Data - Sampling" in any issue of Employment and Earnings.

## Relationship of Current Population Survey Files to Publications

Each month, a significant amount of information about the labor force is published by the Bureau of Labor Statistics in the Employment and Earnings and Monthly Labor Review reports.

As mentioned previously, the CPS also serves as a vehicle for supplemental inquiries on subjects other than employment, which are periodically added to the questionnaire. From the basic and supplemental data, the Bureau of the Census issues three series of publications under the general title Current Population Reports:

P-20 Population Characteristics
P-23 Special Studies
P-60 Consumer Income
All Current Population Reports, including the other series for population estimates and projections and special censuses, may be obtained by subscription from the U.S. Government Printing Office at 202-783-3238. Subscriptions are available as follows: Population Characteristics, Special Studies, and Consumer Income series (P-20, P-23, P-60) combined, \$101 per year (sold as a package only); Population Estimates and Projections, (P-25),
$\$ 27$ per year. Single issues may be ordered separately; ordering information and prices are provided in the Bureau of the Census Catalog and Guide, the Monthly Product Announcement (MPA), and in Census and You. Selected reports also may be accessed on the INTERNET at http://census.gov/library/publications.html.

## Geographic Limitations

The CPS sample was selected so that specific reliability criteria were met nationally, for each of the 50 States and for the District of Columbia. Since 1985, these reliability criteria have been maintained through periodic additions and deletions in the State samples. Estimates formed for geographic areas identified on the microdata file which are smaller than states are not as reliable.

## Weights

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns for the entire panel of respondents. The CPS estimation procedure involves weighting the data from each sample person. The base weight, which is the inverse of the probability of the person being in the sample, is a rough measure of the number of actual persons that the sample person represents. Almost all sample persons in the same state have the same base weight, but the weights across states are different. Selection probabilities may also differ for some sample areas due to field subsampling, which is done when areas selected for the sample contain many more households than expected. The base weights are then adjusted for noninterview, and the ratio estimation procedure is applied.

1. Noninterview adjustment. The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondent for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a state. Similarity of sample areas is based on Core-Based Statistical Area (CBSA) status and size. Within each cluster, there is a further breakdown by residence. Each CBSA cluster is split by "principal city" and "balance of the CBSA." The proportion of occupied sample households not interviewed fluctuates around 8 percent depending on weather, vacations, etc.
2. Ratio estimates. The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and state of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of these population characteristics. This is accomplished through two stages of ratio adjustment as follows:
a. First-stage ratio estimate. The purpose of the first-stage ratio adjustment is to reduce the contribution to variance that results from selecting a sample of PSUs rather than drawing sample households from every PSU in the nation. This adjustment is made to the CPS weights in two race cells: black and nonblack; it is applied only to PSUs that are nonself-representing and for those states that have a substantial number of black households. The procedure corrects for differences that existed in each state cell at the time of the 2000 census between 1) the race distribution of the population in sample PSUs and 2) the race distribution of all PSUs (both 1 and 2 exclude self-representing PSUs).
b. Second-stage ratio estimate. This procedure substantially reduces the variability of estimates and corrects, to some extent, for CPS undercoverage. The CPS sample weights are adjusted to ensure that sample-based estimates of population match independent population controls. Three sets of controls are used:
1) 51 state controls of the civilian noninstitutional population 16 years of age and older
2) national civilian noninstitutional population controls for 14 hispanic and 5 nonhispanic age-sex categories
3) national civilian noninstitutional population controls for 66 white, 42 black, and 10 "other" agesex categories

The independent population controls are prepared by projecting forward the resident population as enumerated on April 1, 2000. The projections are derived by updating demographic census data with information from a variety of other data sources that account for births, deaths, and net migration. Estimated numbers of resident Armed Forces personnel and institutionalized persons reduce the resident population to the civilian noninstitutional population. Estimates of net census undercount, determined from the Post Enumeration Survey, are added to the population projections. Prior to January 2003, the projections were based on earlier censuses, and prior to January 1994, there was no correction for census undercount. A summary of the current procedures used to make population projections is given in "Revisions in the Current Population Survey Effective January 2003" in the January 2003 issue of Employment and Earnings.

## Comparability of CPS From Microdata Files With Published Sources

Although total estimates of the total population will equal published estimates, labor force estimates produced from a microdata file may not be directly comparable or identical with the published nonseasonally adjusted labor force data. The official labor force statistics published by the Bureau of Labor Statistics (BLS) are calculated using the CPS composite weight (PWCMPWGT). Anyone wanting to replicate not seasonally adjusted BLS estimates should use this weight. However, not all estimates made from a public use file will match such weighted published estimates. This is because of various steps taken in the creation of CPS public use files to protect the confidentiality of CPS respondents. Top side estimates for most major demographic and economic categories such as age, race, gender and major labor force status will agree with the published totals; however, estimates for small groups/combinations of these characteristics will differ. The same is true for any estimates for any demographic or labor force characteristic not listed above. Such estimates will be similar but not identical.

Another factor also inhibits microdata comparison with published labor force data. This is the seasonal adjustment that is applied to many published statistics. This adjustment is used to adjust for normal seasonal variations to help distinguish the underlying economic situation in month-to-month changes and is not reflected in any of the weights or variables included on the public use files.

Shown below are data from January and July 2015 which demonstrate how estimates compiled using the final weights from the microdata file may differ from the published composited estimates, with and without seasonal adjustment. Note that the composite estimation procedure was not used for estimates published from January 1994 to May 1994. For a further description of both the composite estimator and seasonal adjustment, see the most recent of the CPS Technical Paper (66 or 77).

Comparison of CPS Estimates from Microdata Files with Published Sources

|  | Civilian Noninstitutional Population | Civilian Labor Force | Employed | Unemployed | Not in Labor Force |

## ATTACHMENT 3

## OVERVIEW

September 2022 Tobacco Use Supplement

## General

U.S. Census Bureau staff conducted a Tobacco Use Supplement (TUS) to the Current Population Survey (CPS) in conjunction with the September 2022 CPS. The National Cancer Institute (NCI) and the U.S. Food and Drug Administration (FDA) currently co-sponsor the supplement. NCI has sponsored the TUS-CPS regularly since 1992 (more information on individual past waves can be found on the NCI website cancercontrol.cancer.gov/tus-cps). The CPS is a monthly labor force survey conducted in approximately 44,000 interviewed households across the country. Attachment 8 contains a facsimile of the September 2022 TUS questions.

Major changes in content of the 2022-2023 wave included:

- Removing detailed items on use of dissolvable tobacco products.
- Removing items on exposure to federal court mandated tobacco company corrective statements about the dangers of smoking cigarettes

New items include:

- Current use of heated tobacco products.
- Ever use of nicotine pouches
- Current use of nicotine pouches
- Switching to nicotine pouches to quit cigarettes/cigars

TUS data can be used by researchers to monitor tobacco control progress; conduct tobacco-related research, including tobacco health disparities; and evaluate tobacco control programs and policies. Although the TUS has changed slightly between 1992 and 2023, it has generally contained the same information covering:

- Current cigarette smoking status and amount smoked;
- Use of menthol cigarettes (since 2003);
- Smoking history, quit attempts, and intention to quit;
- Level of nicotine dependence (since 2003);
- Cost of cigarettes and purchase location (since 2003);
- Medical/dental advice to quit;
- Cigar, pipe, and smokeless tobacco use;
- Harm reduction and other emerging products (since 2003);
- Workplace and home smoking restrictions; and
- Attitudes toward smoke-free policies in public places.

More recent series have included more detailed information on:

- Emerging tobacco products; e-cigarette items were added in the 2014-2015 series for the general population (while "ever use" of e-cigarettes among ONLY current and recently quit former users of any tobacco product was first introduced in May 2011).
- Use of flavored non-cigarette tobacco products; and
- Attitudes toward smoking and vaping in multi-unit housing.

The September 2022, January 2023, and May 2023 collections make up the 2022-23 TUS-CPS wave. Each file contains only TUS supplement data collected for the specific month (e.g., September 2022, January 2023, or May 2023) and its corresponding CPS data. State data will be most reliable when using data from all three months of data collection, within a survey wave. For this reason, we recommend using all three files when analyzing most state or sub-state level data.

For the September 2022 Tobacco Use Supplement, is the citation is:
US Department of Commerce, Census Bureau 2023, National Cancer Institute and Food and Drug Administration co-sponsored Tobacco Use Supplement to the Current Population Survey. September 2022. cancercontrol.cancer.gov/tus-cps.

To cite the Technical Documentation and Data Files, use the following in the above citation: cancercontrol.cancer.gov/tus-cps/results.
For more information about past, current and future NCI TUS, past data files' citations, data reports, and publications utilizing supplement data, see the NCI website: cancercontrol.cancer.gov/tus-cps.

The NCI TUS-CPS Management Team has developed the 2018-2019 Tobacco Use Supplement to the Current Population Survey (TUS-CPS) User Guide for Conducting Weighted Analyses, which includes specific information and guidance on obtaining properly weighted statistics and appropriate variance estimates using the 2018-2019 data, and features illustrative examples of different types of analyses, including statistical code in both SAS and SAS-Callable SUDAAN. This user guide is available at cancercontrol.cancer.gov/brp/tcrb/tus-cps/questionnaires-data\#2018

## Data Collection

Respondents are included in the 2022-23 TUS-CPS sample typically only once. The rotation of households in and out of the TUS-CPS sample were generally sufficiently spaced apart with months between interviewing, so that the sample did not contain many overlapping panels. This eliminated most individuals from being included in the sample twice within the 2022-23 main data files.

The 2022-2023 Tobacco Use Supplement Items. The Supplement consisted of Items PEA1 through SINTTP. Most CPS household members aged 18 years and older who had completed CPS Core items were eligible for these items in September 2022.
Respondent burden reduction. A new feature that was first implemented in the 2014-15 wave and continued in this 2022-2023 wave consisted of random selection of respondents in larger households to reduce respondent burden. If the household had only 1 or 2 supplement eligible members, then those persons were selected for self- interview. If the household had 3 or 4 supplement eligible members, then 2 of them were randomly selected for self-interview. If the household had more than 4 supplement eligible members, then 3 of them were randomly selected for self-interview.

For those supplement eligible persons NOT randomly selected for self-interview, no supplement questions were asked. This is a change from the previous collections for this supplement earlier waves. A proxy interview was implemented for a selected self- interview respondent ONLY after four failed callback attempts.

## Items for Both Proxy and Self-Respondents

Self-respondents were eligible for the entire supplement, whereas proxy respondents were only eligible for certain items. Information was collected from proxies on topics such as smoking status (Items PEA1 - PEA3) and the use of non-cigarette tobacco products; cigars (including cigar types: large/regular cigars, cigarillos, and little filtered cigars), pipes (asked separately about regular pipes and water pipes/hookah), electronic cigarettes (e-cigarettes), smokeless tobacco (including snuff, dip, chewing tobacco, and snus), nicotine pouches and heated tobacco products (HTP). (Items PEJ1a@1-6 and PEJ2a@1-6).

## Items for Self-Respondents Only

In addition to the smoking and other tobacco use status questions, self-respondents were asked various questions depending on their smoking/tobacco use status. See details for Questionnaire Sections B-K in ATTACHMENT 1- ABSTRACT.

## Special Administrative Items

We also collected some special questions, such as type of interview [self (full) interview, proxy interview], the language in which the interview was conducted, the survey method (telephone vs. personal-visit interviews), Computer Assisted Telephone Interviewing (CATI) vs. Computer Assisted Personal Interviewing (CAPI), and the date of the interview.

Note about Respondent Universe on Smoking Quitting Attempts:
Beginning with the 2003 TUS-CPS, both every-day and some-day current smokers who smoked at least 12 days in the last 30 days were asked about attempts to try to quit smoking lasting at least one day, including characteristics of the attempt(s). We asked those some-days smokers smoking less than 12 days during the past 30 days whether during the past 12 months, they had TRIED to QUIT smoking COMPLETELY (Da). Before 2001-02, only every-day smokers were asked these questions on the TUS-CPS, and in 2001-02 all current cigarette smokers (both every-day and some-day) were asked these questions.

## Data Processing

The data processing involved editing the September 2022 Supplement data. This process is described in the next section.

## Edits, Allocations, and Recodes

Regular Edits Data processing involved a consistency edit of all supplement items. The consistency edit ensured that the entries within an individual record followed the correct skip pattern.

Other Edits We also edited the supplement data based on patterns of response, such as:

- making check items consistent with entries;
- making the various records of proxy/self consistent with each other; and
- assigning a code " 88 " in the variable PES78 when we knew that the interview was done by a proxy, but we did not know by whom.

Recodes We also created an interview status recode and a smoking status recode.

- The interview status recode is identified by the variable "INTRVIEW" where Code 1 is a TUS interview (self or proxy). Code 2 refers to non-interviews among those originally eligible for the supplement who are adults 18 years and older who are members of CPS interviewed households and not active duty members of the armed forces. Thus, Code 2 also includes those excluded from final eligibility and not interviewed due to having incomplete CPS interviews or those not randomly selected for supplement interview, as well as those nonresponses to TUS interview. Code -1 refers to those records ineligible from the start for TUS interview because they are CPS non-response household records, are children ( $0-14$ years of age), adults 15-17 years of age, or on active duty in the armed forces.
- The smoking status recode is identified by the variable "SMOKSTAT" where Code 1 is a "never smoker," Code 2 is an "every day smoker," Code 3 is a "some days smoker," Code 4 is a "former smoker," and Code -9 is "indeterminate (unknown) smoking status. This recode refers to the smoking status based on the "100 cigarettes" definition of smoking, Thus, those 18-34 year olds who responded No, Don't Know (DK), or Refused (R) to the PEA1 item ("Have you EVER smoked $100 \ldots$...) who were also asked item PEA3 ("Do you NOW smoke every day, some days, or Not at all?") to explore experimental current smoking, are categorized according to whether or not they answered YES, or NO/DK/R to PEA1 (EVER smoked at least 100 cigarettes) and ONLY a Yes response to A 1 had their A 3 responses considered.

Disclosure Avoidance Methods Variables indicating either a number of cigarettes smoked during a time period or a price paid for cigarettes were subjected to disclosure avoidance techniques, by topcoding the value, and for the price paid items, rounding to the nearest five cents in addition to topcoding by state. More detail about these disclosure avoidance techniques and how they were determined will be provided at a later date.

The values and position locations for each variable are defined and identified in the supplement Record Layout (Attachment 7). Skip patterns instead of universes are provided in the questionnaire facsimile in Attachment 8.

## Recoding of Items about Flavors

Some variables for past 30-day use of flavored non-cigarette tobacco products have been recoded/masked due to a low number of responses. To promote consistency within a single type of non-cigarette tobacco product and across the three survey months of the 2022-2023 wave (September 2022, January 2023, and May 2023), if a flavor had too few responses during any survey month, the flavor was recoded/masked
across the wave. Thus, different flavor categories are available for different types of non-cigarette tobacco products, and the "other flavor" categories may represent different combinations of flavors. See the Record Layout (Attachment 7) for specific flavor categories available for each product.

Recoding/masking a flavor with too few positive responses involved changing all "yes" responses for that flavor to "no" responses and changing the variable name's prefix to indicate that topcoding has taken place (e.g., a variable name beginning with PEJFLA would be changed to PTJFLA). For that same product, the response to the "other" flavor variable would be changed from "no" to "yes," if it was not "yes" already. The "other" flavor variable's name would also be changed to indicate that topcoding has taken place.

## Weighting

PWSSWGT for Labor Force Data All adult records retain the "basic CPS weight," which controls for age, race, sex, and Hispanic origin estimates and for individual state 16+ estimates. Use the basic CPS final weight PWSSWGT for tallying the labor force items. For a description of this weight, see Attachment 2, "Overview of the Current Population Survey."

Special Supplement Weights This file contains two special supplement weights: a supplement nonresponse adjustment weight and a supplement self-only non-response adjustment weight. In addition to maintaining national demographic totals (for age, sex, race, and origin), these weights were designed to maintain each state's population total.

## Supplement Non-Response and Self-only Non-Response Weights

- Use the supplement non- response adjustment weight PWNRWGT when using ALL respondents (self or proxy) for tallying the limited set of tobacco use status supplement items.
- When you are interested in ONLY SELF- response analysis (especially for those detailed items ONLY asked on the FULL self-response interview), use the supplement self-only non-response adjustment weight PWSRWGT for tallying the supplement items.

Special Replicate Weights File. A set of special replicate weights for making variance estimates such as standard errors and creating confidence intervals to account for the complex sample design of CPS and TUS have been created and exist on separate files. Replicate weight files are available from the Census Bureau at (census.gov/data/datasets/time-series/demo/cps/cps-supp_cps-repwgt.html) and are also directly available from the NCI TUS website cancercontrol.cancer.gov/tus-cps/results.

## September 2022 NCI and FDA co-sponsored TUS-CPS Files

CPS Labor Force Data. The September 2022 CPS file contains 127,192 records. The first 1,000 characters contain the labor force data for each record. Attachment 6 contains the CPS Basic Items Record Layout, which includes the variable name, character size, location on the record, universe, and the possible values of each basic CPS variable included on the file.

PRPERTYP determines the type of record as follows:

## PRPERTYP

1 = Child household member (0-14 years old)
$2=$ Adult civilian household member ( $15+$ years old)
3 = Adult Armed Forces household member ( $15+$ years old )
HRINTSTA determines the interview status of the household.

## HRINTSTA

1 = Interviewed
$2=$ Type A Non-interview (These records represent households that were eligible for CPS interview but were not interviewed because no one was home, household members were temporarily absent, etc.)
3 = Type B Non-interview (These records represent sample addresses determined to be ineligible for the CPS by virtue of a temporary situation, such as being vacant, nonresidential, etc. These households could become eligible for a CPS interview.)
4 = Type C Non-interview (These records represent sample addresses determined to be ineligible for CPS by virtue of a permanent change such as demolished, condemned, etc. These addresses will not be visited again for CPS interviews.)
The Total Number of Records is Determined by Combining the Values of PRPERTYP (1-3) and HRINTSTA (2-4).

The values of PRPERTYP are:

## Unweighted Counts

September 2022
$1=$ Child $\quad 17,467$
$2=$ Adult Civilian, 15+
83,810
3 = Adult, Armed Forces
360
Total
101,637

The values of HRINTSTA are:

| 1 = Interview | $\mathbf{1 0 1 , 6 3 7}$ |
| :--- | ---: |
|  |  |
| $2=$ Type A Non-interview | 15,889 |
| $3=$ Type B Non-interview | 8,998 |
| $4=$ Type C Non-interview | $\frac{668}{\mathbf{1 2 7 , 1 9 2}}$ |

[^1]
## Supplement Response (Non-Response) and Supplement Self-Only Response (NonResponse) Rates

Non-response: The effect of non-response cannot be measured directly, but one indication of its potential effect is the supplement response rate (or non-response rate). For the September 2022 basic CPS, the household- level response rate was 73.0 percent. The person-level response rates for the Tobacco Use Supplement were 76.8 percent for the total (allowing all self and proxy responses) and 57.6 percent for self-response only (counting proxy responses as non-responses).

Since the basic CPS non-response rate is a household-level rate and the Tobacco Use Supplement nonresponse rate is a person-level rate, we cannot combine these rates to derive an overall non-response rate. Nonresponding households may have fewer persons than interviewed ones, so combining these rates may lead to an overestimate of the true overall non-response rate for persons for the Tobacco Use Supplement. In order for an individual to be eligible for the supplement, the individual's basic CPS questionnaire must have been completed. Final eligibility is further limited to those who were randomly selected based on household size for FULL self -response interview.

The TUS response rate is calculated as the percentage of those who completed the TUS (interviewed) to those who were eligible to complete it after all previous exclusions.

For the break-down by response type and sample size, see the chart below.

| September 2022 | Count | Percent |
| :--- | :---: | :---: |
| Total Eligible for TUS <br> Interview | 68,626 | 100.0 |
| Self Respondents | 39,558 | 57.6 |
| Proxy Respondents | 13,113 | 19.1 |
| Non-Respondents | 15,955 | 23.2 |

The Total Number of TUS-CPS Interviewed Adults 18+ (INTRVIEW=1) for September 2022 is: $\mathbf{5 2 , 6 7 1}{ }^{\mathbf{2}}$

Those INELIGIBLE for the TUS ( $\mathrm{N}=47,469$ ) include:

- children $0-14$ years of age $(\mathrm{N}=17,467)$,
- adults $15-17$ years of age ( $\mathrm{N}=3,915$ ),
- those adults in the Armed Forces ( $\mathrm{N}=360$ ),
- those with incomplete CPS interviews $(\mathrm{N}=172)$ and
- CPS non-interviewed persons ( $\mathrm{N}=25,555$ ).

Tobacco Use Supplements (TUS-CPS)

## TUS-CPS Data Harmonization and Its Linkages to Other CPS Supplements and Health Outcomes Data

## Data Harmonization

Data from 1992 through the 2019 waves of the TUS-CPS have been harmonized into a single file by NCI to provide a more robust data source by increasing the sample size for measures and to allow for more seamless tracking of trends over time. Data from the 2022-2023 series will be added to the harmonized dataset after all three data collection months are available. Please visit cancercontrol.cancer.gov/tus-cps/results for more information on the harmonized data and see 2019 Workshop presentation, cancercontrol.cancer.gov/brp/tcrb/tus-cps/workshops/2019/TUSSRNT2019WorkshopPresent.pdf

## Harmonized Topics

Core variables from CPS (demographic, geographic, occupational, economic variables) were included in the harmonization. Harmonized topics include:

- Cigarette use, both current and prior usage among daily and nondaily smokers. Also includes menthol use since 2003
- Workplace and home smoking restrictions
- Attitudes toward smoke-free policies in indoor work areas/public places (no harmonization for smoke-free attitudes for multi-unit housing which started in 2014-15 and will later be harmonized with 2018-19 and future data)
- Advice by physician/dentist to quit smoking
- Health perceptions/beliefs (harm reduction)
- Smoking history including cessation attempts and aids used for both current and former smokers
- Other tobacco products: cigar, pipe, and smokeless tobacco use; other emerging products, including e-cigarettes and heated tobacco products.

## Data Collection

Respondents are included in a TUS-CPS sample (wave) typically only once. The rotation of households in and out of sample for the TUS-CPS was generally sufficiently spaced, with months between interviewing so the sample did not contain many overlapping panels. This spacing eliminated most individuals being in the sample twice within the various TUS waves main data files. Intentional exceptions to this are for those longitudinal cohorts in which followup was a goal such as for May 2010-2011 and February 2002-2003. A limited cohort was also created to examine changes in wording of other tobacco products for January and May 1999 with January and May 2000, respectively.

Additional information on data collection waves can be found on the NCI website cancercontrol.cancer.gov/ tus-cps/results.html and in the technical documentation for each individual month's data collection.

## Information on TUS-CPS Linkages to Other CPS Supplements and Health Outcomes Data

A unique feature of the CPS is its panel design, in which each household in the sample is surveyed for four consecutive months (panels \# 1-4) and then for four more consecutive months (panels \# 58) nine months later. SEE:

- Attachment \# 2- Overview of the Current Population Survey in this Technical Documentation, and
- U.S. Department of Commerce. 2019. Current Population Survey: Design and Methodology Technical Paper 77. Washington, D.C. U.S. Census Bureau [ census.gov/programs-surveys/cps/methodology/CPS-Tech-Paper-77.pdf ] .

Due to this sampling strategy a subset of persons who were in sample for any given month of TUS-CPS fielding (e.g., September 2022, January 2023, or May 2023) can be linked with other CPS Basic and Supplement data from surveys conducted within about $+/-15$ months of a TUSCPS. This affords an opportunity to not only create a special cohort follow-up (as we did in Feb. 2002-03 and May 2010-11), but also to include other topics in analysis from March Annual Social and Economic Supplement (ASEC), Computer and Internet and Use, American Time Use (ATUS), Voting and Registration, Food Security, Veterans, and other CPS Supplements.

For a listing of CPS Supplements, see census.gov/programs-surveys/cps/about/supplemental-surveys.html , for specific CPS Supplements see the Census CPS ftp website for individual Supplement's Technical Documentation and data download at census.gov/programs-surveys/cps/technical-documentation/complete.html and for some examples of recent info see:

- March Annual Social and Economic (ASEC) Supplement: census.gov/programs-surveys/cps.html
- Computer and Internet Use Supplement: census.gov/topics/population/computer-internet.html
- American Time Use Supplement (ATUS): bls.gov/tus/
- Voting and Registration Supplement:
census.gov/programs-surveys/cps/techdocs/cpsnov18.pdf and census.gov/topics/public-sector/voting/data.html
- Food Security Supplement:
census.gov/programs-surveys/cps/techdocs/cpsdec 17.pdf and ers.usda.gov/data-products/food-security-in-the-united-states/
- Veterans Supplement: census.gov/programs-surveys/cps/techdocs/cpsaug 17.pdf

For matching variables and procedures for merging other CPS Supplement data to the 2022-23 TUS-CPS files and earlier TUS-CPS series, see:

- Census Bureau website document on linking the CPS public use data files, census.gov/programssurveys/cps/methodology/How\ To\ Link\ CPS\ Public\ Use\% 20Files.pdf.
- http://www.cancermeetings.org/TUSCPSWebinar/presentations.cfm , especially http://www.cancermeetings.org/TUSCPSWebinar/documents/TUSCPS Webinar Gi bson.pdf
- census.gov/programs-surveys/cps/techdocs/cpsmay10-11.pdf
- cancercontrol.cancer.gov/brp/tcrb/tus-cps/workshops/index

For how to generally reweight a subset of multiple panel data from the same individuals, see:

- the NCI report describing how we reweighted the TUS 2002-2003 Overlap (Longitudinal) Cohort data: cancercontrol.cancer.gov/brp/tcrb/tus-cps/TUSCPS_overlap.pdf
- census.gov/programs-surveys/cps/techdocs/cpsmay10-11.pdf

TUS-CPS data can also be linked to health outcomes data with the National Longitudinal Mortality Study_(NLMS). Currently TUS-CPS data is linked to the March ASEC data which is the basis of the cohorts in the NLMS. Health outcomes data include primarily disease-specific cause mortality through its match to the National Death Index (NDI). The Tobacco Longitudinal Mortality Study (TLMS) consists of TUS-CPS from September 1985 to July 2018 linked with the NDI. Future opportunities will include linkages with North American Association of Central Cancer Registries (NAACCR) and Medicare claims data. See the following websites for more information:

- census.gov/nlms and census.gov/topics/research/nlms.Reference_Manual
- census.gov/topics/research/tlmscancercontrol.cancer.gov/brp/tcrb/tus-cps/linkages

# ATTACHMENT 4 

## GLOSSARY

## Current Population Survey

Age-Age classification is based on the age of the person at his/her last birthday. The adult universe (i.e., population of marriageable age) is comprised of persons 15 years and over for CPS labor force data.

#### Abstract

Allocation Flag Each edited item has a corresponding allocation flag indicating the nature of the edit. See the attachment on allocation flags for more information. The second character of the item name is always "X".

Armed Forces-Demographic information for Armed Forces members (enumerated in off-base housing or on-base with their families) is included on the CPS data files. No labor force information is collected of Armed Forces members in any month. In March, supplemental data on income are included for Armed Forces members. This is the only month that non-demographic information is included for Armed Forces members.

## Civilian Labor Force-(See Labor Force.)

Class of Worker This refers to the broad classification of the person's employer. These broad classifications for current jobs are:

1) Federal government
2) State government
3) Local government
4) Private industry (including self-employed, incorporated)
5) Self-employed (not incorporated)
6) Working without pay

Domain-The domain for an item is a list or range of its possible values. Note that all unedited items have possible values of -1 (blank), -2 (don't know), and -3 (refused). Since all items have these possible values, they are not shown as valid entries for each item.

Duration of Unemployment-Duration of unemployment represents the length of time (through the current survey week) during which persons classified as unemployed are continuously looking for work. For persons on layoff, duration of unemployment represents the number of full weeks since the termination of their most recent employment. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the present period of seeking work.

Earners, Number of-The file includes all persons 15 years old and over in the household with $\$ 1$ or more in wages and salaries, or $\$ 1$ or more of a loss in net income from farm or nonfarm self-employment during the preceding year.

Edited item-An edited item is allocated or imputed by the processing system. In most cases this means allocating a value where the unedited item contains a value of blank, "don't know", or "refused". The second character of the item name is always " E ".

An edited version of an item exists only if that item is processed through the edits. If the edits never deal with a particular item, then that item only has an unedited version.

Since the instrument enforces skip patterns and consistency between many items, the edits are left mainly with the job of allocating missing values. Also, since an interviewer is allowed to "back up" in the interview, there may be "off-path" items filled in the unedited data. The edits also blank these off-path items if an edited version of the items exists.

## Education-(See Level of School Completed.)

## Employed (See Labor Force.)

Family-A family is a group of two persons or more (one of whom is the householder) residing together and related by birth, marriage, or adoption. All such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family Household-A family household is a household maintained by a family (as defined above), and may include among the household members any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of Family).

Family Weight-This weight is used only for tallying family characteristics. In March, the weight on the family record is the March supplement weight of the householder or reference person.

Final Weight-Used in tabulating labor force items in all months, including March. The final weight is controlled to independent estimates for:

1) States
2) Origin, Sex, and Age
3) Age, Race, and Sex

This weight should not be used when tabulating March supplement data.
Full-Time Worker-Persons on full-time schedules include persons working 35 hours or more, persons who worked 1-34 hours for noneconomic reasons (e.g., illness) and usually work full-time, and persons "with a job but not at work" who usually work full-time.

Group Quarters-Group quarters are noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing nine or more persons unrelated to the person in charge.

Head Versus Householder Beginning with the March 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used.

## Highest Grade of School Attended-(See Level of School Completed.)

Hispanic/Non-Hispanic Origin-A person's Hispanic/Non-Hispanic status in this file is determined on the basis of a question that simply asks "(Is/Are) (Name/you) Hispanic?"

Hours of WorkHours of work statistics relate to the actual number of hours worked during the survey week. For example, a person who normally works 40 hours a week but who is off on the Veterans Day holiday is reported as working 32 hours even though he is paid for the holiday.

For persons working in more than one job, the figures related to the number of hours worked in all jobs during the week. However, all the hours are credited to the major job.

Household-A household consists of all the persons who occupy a house, an apartment, or other group of rooms, or a room, which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters; that is, when the occupants do not live with any other person in the structure, and when there is direct access from the outside or through a common hall. The count of households excludes persons living in group quarters, such as military barracks and institutions. Inmates of institutions (mental hospitals, rest homes, correctional institutions, etc.) are not included in the survey.

Household Weight-The household weight is used for tallying household characteristics. In March, the household weight is the March Supplement weight of the householder.

Householder-The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Householder With No Other Relatives in Household-A householder who has no relatives living in the household. This is the entry for a person living alone. Another example is the designated householder of an apartment shared by two or more unrelated individuals.

Householder With Other Relatives (Including Spouse) in Household-The person designated as householder if he/she has one or more relatives (including spouse) living in the household.

Industry, Occupation, and Class of Worker (I\&O) Current Job (basic data) For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which they worked the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full-time or part-time). The I \& O questions are also asked of persons not in the labor force who are in the fourth and eighth months in sample and who have worked in the last five years.

Job Seekers-All unemployed persons who made specific efforts to find a job sometime during the 4 -week period preceding the survey week.

Longitudinal Weight-Used for gross flows analysis. Only found on adult records matched from month to month.
PEMLR-(Major Labor Force Recode)-This classification is available for each civilian 15 years old and over according to his/her responses to the monthly (basic) labor force items.

Labor Force Persons are classified as in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" includes all civilians classified as employed or unemployed. The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

## 1. Employed

Employed persons comprise (1) all civilians who, during the survey week, do any work at all as paid employees or in their own business or profession, or on their own farm, or who work 15 hours or more as unpaid workers on a farm in a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor-management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. These persons would have a Monthly Labor Force Recode (MLR) of 1 or 2 respectively in characters 180-181 of the person record which designates "at work" and "with a job, but not at work." Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they held the longest.

## 2. Unemployed

Unemployed persons are those civilians who, during the survey week, have no employment but are available for work, and (1) have engaged in any specific job seeking activity within the past 4 weeks such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. These persons would have an MLR code of 3 or 4 in characters 180-181 of the person record. The unemployed includes job leavers, job losers, new job entrants, and job reentrants.

## a. Job Leavers

Persons who quit or otherwise terminate their employment voluntarily and immediately begin looking for work.

## b. Job Losers

Persons whose employment ends involuntarily, who immediately begin looking for work, and those persons who are already on layoff.
c. New Job Entrants

Persons who never worked at a full-time job lasting two weeks or longer.

## d. Job Reentrants

Persons who previously worked at a full-time job lasting two weeks or longer but are out of the labor force prior to beginning to look for work.

Finally, it should be noted that the unemployment rate represents the number of persons unemployed as a percent of the civilian labor force 16 years old and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percent of the civilian labor force 16 years old and over; the sum of the rates for the four groups thus equals the total unemployment rate.

## 3. Not in Labor Force

All civilians 15 years old and over who are not classified as employed or unemployed. These persons are further classified by major activity: retired, unable to work because of long-term physical or mental illness, and other. The "other" group includes, for the most part, students and persons keeping house. Persons who report doing unpaid work in a family farm or business for less than 15 hours are also classified as not in the labor force.

For persons not in the labor force, data on previous work experience, intentions to seek work again, desire for a job at the time of interview, and reasons for not looking for work are asked only in those households that are in the fourth and eighth months of the sample, i.e., the "outgoing" groups, those which had been in the sample for three previous months and would not be in for the subsequent month.

Persons classified as NILF have an MLR code of 5-7 in characters 180-181 of the person record.
Layoff-A person who is unemployed but expects to be called back to a specific job. If he/she expects to be called back within 30 days, it is considered a temporary layoff; otherwise, it is an indefinite layoff.

Level of School Completed/Degree Received-These data changed beginning with the January 1992 file. A new question, "What is the highest level of school ... has completed or the highest degree ... has received?" replaced the old "Highest grade attended" and "Year completed" questions. The new question provides more accurate data on the degree status of college students. Educational attainment applies only to progress in "regular" school. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system.

Looking for Work-A person who is trying to get work or trying to establish a business or profession.
Marital Status-The marital status classification identifies four major categories: single (never married), married, widowed, and divorced. These terms refer to the marital status at the time of enumeration.

The category "married" is further divided into "married, civilian spouse present," "married, Armed Force spouse present," "married, spouse absent," "married, Armed Force spouse absent," and "separated." A person is classified as "married, spouse present" if the husband or wife is reported as a member of the household even though he or she may be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as "separated" included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily estranged from their spouses because of marital discord.

For the purpose of this file, the group "other marital status" includes "widowed and divorced," "separated," and "other married, spouse absent."

Month-In-Sample-The term is defined as the number of times a unit is interviewed. Each unit is interviewed eight times during the life of the sample.

Never Worked-A person who has never held a full-time civilian job lasting two consecutive weeks or more.
Nonfamily Householder-A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Nonworker A person who does not do any work in the calendar year preceding the survey.
Nonrelative of Householder With No Own Relatives in Household-A nonrelative of the householder who has no relative(s) of his own in the household. This category includes such nonrelatives as a foster child, a ward, a lodger, a servant, or a hired hand, who has no relatives of his own living with him in the household.

Nonrelative of Householder With Own Relatives (Including Spouse) in Household Any household member who is not related to the householder but has relatives of his own in the household; for example, a lodger, his spouse, and their son.

Other Relative of Householder Any relative of the householder other than his spouse or child; for example, father, mother, grandson, daughter-in-law, etc.

Out Variable-An instrument-created item that stores the results of another item.
Own Child A child related by birth, marriage, or adoption to the family householder.
Part-Time, Economic Reasons-The item includes slack work, material shortages, repairs to plant or equipment, start or termination of job during the week, and inability to find full-time work. (See also Full-Time Worker.)

Part-Time, Other Reasons-The item includes labor dispute, bad weather, own illness, vacation, demands of home housework, school, no desire for full-time work, and full-time worker only during peak season.

Part-Time Work-Persons who work between 1 and 34 hours are designated as working "part-time" in the current job held during the reference week. For the March supplement, a person is classified as having worked part-time during the preceding calendar year if he worked less than 35 hours per week in a majority of the weeks in which he worked during the year. Conversely, he is classified as having worked full-time if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Part-Year WorkPart-year work is classified as less than 50 weeks' work.
Population Coverage-Population coverage includes the civilian population of the United States plus approximately one million members of the Armed Forces in the United States living off post or with their families on post but excludes all other members of the Armed Forces. This file excludes inmates of institutions. The labor force and work experience data are not collected for Armed Forces members.

Processing Recode An item calculated by the processing system from a combination of other items in the database. The second character of the item name is always "R".

Race-The population is divided into six groups on the basis of race: White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian or Other Pacific Islander, and Other races. The 2011 CPS uses the Census 2010 question on race that allows for more than one race reporting, but does not include the Census 2010 "Some Other Race" category.

Reentrants Persons who previously worked at a full-time job lasting two weeks or longer, but who are out of the labor force prior to beginning to look for work.

Related Children-Related children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to single (never married) children; however, "own children under 25 " and "own children of any age," include all children regardless of marital status. The totals include nevermarried children living away from home in college dormitories.

Related Subfamily-A related subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including, the householder or spouse. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the number of families.

School, Major Activity-A person who spent most of his time during the survey week attending any kind of public or private school, including trade or vocational schools in which students receive no compensation in money or kind.

Secondary Individual-A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily households and inmates of institutions) who is not related to any other person in the household or group quarters.

Self-Employed-Self-employed persons are those who work for profit or fees in their own business, profession or trade, or operate a farm.

Stretches of Unemployment-A continuous stretch is one that is not interrupted by the person getting a job or leaving the labor market to go to school, to keep house, etc. A period of two weeks or more during which a person is employed or ceased looking for work is considered to break the continuity of the period of seeking work.

Unable to Work-A person is classified as unable to work because of long-term physical or mental illness, lasting six months or longer.

Unedited item-An item that is produced by the computer automated instrument, either collected during the interview or created by the instrument. The second character of the item name is always "U".

## Unemployed-(See Labor Force.)

Unpaid Family Workers-Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

Unrelated Individuals-Unrelated individuals are persons of any age (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be (1) a nonfamily householder living alone or with nonrelatives only, (2) a roomer, boarder, or resident employee with no relatives in the household, or (3) a group quarters member who has no relatives living with him/her. Thus, a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to anyone else in the housing unit, a maid living as a member of her employer's household but with no relatives in the household, and a resident staff member in a hospital living apart from any relatives are all examples of unrelated individuals.

Unrelated Subfamily-An unrelated subfamily is a family that does not include among its members the householder and relatives of the householder. Members of unrelated subfamilies may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of families. However, the number of such unrelated subfamilies became so small ( 37,000 in 1967) that beginning with the data for 1968 (and beginning with the census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Veteran Status-If a person served at any time during the four most recent wartime periods, the codes for all periods of service are entered. A person can report up to 4 periods of service. The following codes are used:

0 Children under 15
1 September 2001 or later
2 August 1990 to August 2001
3 May 1975 to July 1990
4 Vietnam era (Aug 1964 to Apr 1975)
5 February 1955 to July 1964
6 Korean War (July 1950 to January 1955)
7 January 1947 to June 1950
8 World War II (December 1941 to December 1946)
9 November 1941 or earlier
Wage and Salary Workers-Wage and salary workers receive wages, salary, commission, tips, or pay in kind from a private employer or from a governmental unit. Also included are persons who are self-employed in an incorporated business.

Workers-(See Labor Force--Employed.)
Work Experience-Includes those persons who during the preceding calendar year did any work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Year-Round Full-Time Worker-A year-round full-time worker is one who usually worked 35 hours or more per week for 50 weeks or more during the preceding calendar year.

## ATTACHMENT 5

## HOW TO USE THE RECORD LAYOUT

Data users familiar with the CPS data files in prior years will see many similarities between the format of this file and those files released before January 1994. As in the past, there are numeric locations on the file which correspond to each variable. There is only one record layout which contains the variables for children, adults, and armed forces members. In prior years, each type of person had a separate record layout.

## Item Naming Conventions

$\not \subset \quad$ The first character of each variable name is one of the following:
H - Household item
G - Geography item

* P - Person item (includes adult items, child items, and armed forces items)
* There is no need to distinguish adult, child, and armed forces items in the variable names in the new system. The recode PRPERTYP (located in positions 161-162) tells you what category the person is in.
$\not \subset \quad$ The second character of each variable name is one of the following:
E - Edited item
U - Unedited item
X- Allocation flag (see Attachment 15 for more information)
W- Weight
R - Recode
T - Topcode
$\not \subset \quad$ The remaining characters describe the variable.
$\not \subset$ For multiple entry items, the file contains a separate variable for each possible response. Each item has the same descriptive name but a number is added as the last digit. For example, Question 22A allows separate entries for up to 6 job search methods. The item names are PELKM1 (this item is edited), PULKM2, (this item is unedited), PULKM3, etc. These items are located in positions 296-307 of the record layout.

... A regular cigar or cigarillo OR a little filtered cigar?
FR: Regular cigars are different from little filter cigars. They can be large cigars, or smaller in size such as cigarillos. They are usually sold individually or in packs of 2 or 3 . Some common brands are Black and Mild's, Swisher Sweets Cigarillos, and Phillies Blunts, but there are others.

FR: Little filtered cigars are different from regular cigars and cigarillos. They resemble cigarettes in size, and are often sold in packs of 20 . They are usually brown in color and have a spongy filter like a cigarette. Some common brands are Prime Time little filter cigars and Winchester little filter cigars, but there are others.

(3) Half of the years you have smoked, or
(4) Less than half the years you have smoked
(5) IF VOLUNTEERED: LESS THAN ONE YEAR
|__|
[GO TO SECTION J]
\(J \quad\) The next questions are about the use of tobacco other than in cigarettes.
ENTER 1 TO CONTINUE
J1a (Have/Has) (you/name) EVER used any of the following EVEN ONE TIME?
(1) YES
(2) NO

J1a1 |__ |...A regular cigar or cigarillo (in Spanish use "medium size cigar" instead of the word "cigarillo") OR a little filtered cigar?

FR: IF ASKED, "cigar smoking" ONLY INCLUDES CIGAR TOBACCO. IT DOES NOT INCLUDE SMOKING CIGARS ONLY WITH MARIJUANA (OR "BLUNTS"), HASHISH OR OTHER SUBSTANCES.

FR: Regular cigars ARE DIFFERENT FROM little filtered cigars. THEY CAN BE large cigars, OR SMALLER IN SIZE SUCH AS cigarillos (IN SPANISH USE "medium size cigars" INSTEAD OF THE WORD "cigarillos" HERE.) THEY ARE USUALLY SOLD INDIVIDUALLY OR IN PACKS OF 2 OR 3. SOME COMMON BRANDS ARE BLACK AND MILD'S, SWISHER SWEETS CIGARILLOS, AND PHILLIES BLUNTS, BUT THERE ARE OTHERS.

FR: Little filtered cigars ARE DIFFERENT FROM regular cigars and cigarillos (IN SPANISH USE "medium size cigars" instead of word "cigarillos" here). THEY RESEMBLE CIGARETTES IN SIZE, AND ARE OFTEN SOLD IN PACKS OF 20. THEY ARE USUALLY BROWN IN COLOR AND HAVE A SPONGY FILTER LIKE A CIGARETTE. SOME COMMON BRANDS ARE PRIME TIME, WINCHESTER, AND CHEYENNE LITTLE FILTERED CIGARS, BUT THERE ARE OTHERS.

J1a2 |__ |...A regular pipe filled with tobacco?
FR: IF ASKED, "pipe smoking" ONLY INCLUDES PIPE TOBACCO. IT DOES NOT INCLUDE SMOKING HASHISH, MARIJUANA, CRACK, OR OTHER SUBSTANCES IN A PIPE. DO NOT INCLUDE WATER PIPES/HOOKAHS (who-kahs) OR OTHER NAMES: SHISHA, NARGHILE, ARGILEH, OR HUBBLE-BUBBLE.

J1a3 |__| ...A water pipe or hookah (who-kah) pipe filled with tobacco?
FR: IF ASKED, "water pipe or hookah (who-kah) pipe smoking" ONLY INCLUDES PIPE TOBACCO. IT DOES NOT INCLUDE SMOKING HASHISH, MARIJUANA, CRACK, OR

OTHER SUBSTANCES IN A PIPE. A WATER PIPE OR HOOKAH (who-kah) PIPE IS ALSO REFERRED TO AS A SHISHA, NARGHILE, ARGILEH OR HUBBLE-BUBBLE.

J1a3.5 INTRO: The next question is about electronic or e-cigarettes. You may also know them as vape-pens, e-hookahs, vapes, or mods. Some look like cigarettes, and others look like pens or are rectangular or box-shaped. These are battery-powered, usually contain liquid nicotine, and produce vapor instead of smoke. Some popular brands include NJOY, Blu, Vuse, and JUUL (PRONOUNCED LIKE "JEWEL").

J1a3.5 (Have/Has)(you/name) EVER used e-cigarettes EVEN ONE TIME?
(1) YES
(2) NO

FR: E-CIGARETTES AND SIMILAR PRODUCTS CAN BE BOUGHT AS ONE-TIME, DISPOSABLE PRODUCTS, AS RE-USABLE KITS WITH A POD, CARTRIDGE, OR WITH REFILLABLE TANKS. THESE ITEMS CONTAIN A NICOTINE AND/OR FLAVORED LIQUID. SOME OF THESE PRODUCTS LOOK LIKE REGULAR CIGARETTES OR PENS, AND SOME ARE RECTANGULAR OR BOX-SHAPED. POPULAR BRANDS INCLUDE NJOY, BLU, VUSE, AND JUUL (PRONOUNCED LIKE "JEWEL).

FR: PRONOUNCE "SNUS" TO RHYME WITH "GOOSE."
J1a4 INTRO: The next question is about smokeless tobacco products which contain tobacco leaf and are used in the mouth. This includes moist snuff, dip, spit, chew tobacco, or snus. Some popular brand names include Grizzly, Skoal, Copenhagen, and Camel Snus, among others. Smokeless tobacco products do not include nicotine pouches such as Zyn (PRONOUNCED "zin"), Rogue, ON!, and Velo (PRONOUNCED "vee-low").

J1a4 (Have/Has) (you/name) EVER used smokeless tobacco EVEN ONE TIME?
(1) YES
(2) NO

FR: Snuff or dip IS COMMONLY PLACED BETWEEN THE GUM AND LIP AND SOLD IN ROUND CANS IN --A LOOSE FORM OR A POUCH THAT LOOKS LIKE A

SMALL TEA-BAG; COMMON BRANDS ARE SKOAL, COPENHAGEN AND GRIZZLY BUT THERE ARE OTHERS. DOES NOT INCLUDE NICOTINE POUCHES SUCH AS ZYN (PRONOUNCED "zin"), Rogue, ON!, OR VELO (PRONOUNCED "vee-low").
Chewing or spit tobacco (ALSO TWIST, PLUG OR SCRAP) IS USUALLY PLACED IN THE SIDE OF THE MOUTH AND CHEWED AND OFTEN SOLD IN WALLETSIZED POUCHES; COMMON BRANDS ARE AMERICA'S BEST CHEW (FORMERLY KNOWN AS REDMAN), LEVI- GARRETT, AND BEECH-NUT, BUT THERE ARE OTHERS.

Snus IS A SPITLESS TOBACCO PRODUCT THAT MAY BE SOLD IN A TIN OR SLIDEPAK IN A LOOSE FORM OR IN SMALL TEABAG-LIKE POUCHES; COMMON BRANDS ARE CAMEL SNUS, MARLBORO SNUS, AND SKOAL SNUS. DOES NOT INCLUDE NICOTINE POUCHES SUCH AS ZYN (PRONOUNCED "zin"), Rogue, ON!, OR VELO (PRONOUNCED "VEE-LOW").

J1a5r INTRO: The next question is about nicotine pouches. These are different from other smokeless tobacco products because they do not contain any tobacco leaf. These small white pouches contain nicotine which users place in their mouth. Some popular brand names include Zyn (PRONOUNCED "zin"), Rogue, ON!, or Velo (PRONOUNCED "vee-low").

J1a5r (Have/Has)(you/name) EVER used a nicotine pouch EVEN ONE TIME?
(1) YES
(2) NO
(3) NEVER HEARD OF IT
\(\qquad\)

J1a6 INTRO: The next question is about heated tobacco products. Some people refer to these as "heat-not-burn" tobacco products. These heat TOBACCO STICKS or CAPSULES to produce a vapor. They are different from e-cigarettes, which heat a LIQUID to produce a vapor. Some brands of heated tobacco products include iQOS (PRONOUNCED "eye-kos"), glo (PRONOUNCED "glow"), and Eclipse.

J1a6 (Have/Has)(you/name) ever tried a "heated tobacco product", EVEN ONE TIME?
(1) YES
(2) NO

ATTACHMENT 9 \\ INDUSTRY CLASSIFICATION \\ Industry Classification Codes for Detailed Industry (4 digit) \\ (Starting January 2020)
}

These categories are aggregated into 52 detailed groups and 14 major groups (see pages 10-12 of this attachment). The codes in the right-hand column are the NAICS equivalent.

These codes correspond to Items PEIO1ICD and PEIO2ICD, in positions 856-859 and 864-867 of the Basic CPS record layout in all months, except the ASEC files. In the ASEC, these codes correspond to PEIOIND and INDUSTRY, in the Person record.

Note: The Census industry codes and NAICS codes are based on the 2017 North American Industry Classification System.

CODE DESCRIPTION CODE

\section*{Agriculture, Forestry, Fishing, and Hunting}

0170 Crop production 111
0180 Animal production and aquaculture 112
0190 Forestry except logging 1131,1132
0270 Logging 1133
0280 Fishing, hunting, and trapping 114
0290 Support activities for agriculture and forestry 115
Mining, Quarrying, and Oil and Gas Extraction
0370 Oil and gas extraction 211
0380 Coal mining 2121
0390 Metal ore mining 2122
\(0470 \quad\) Nonmetallic mineral mining and quarrying 2123
0490 Support activities for mining 213
Utilities
\(0570 \quad\) Electric power generation, transmission and distribution 2211
\(0580 \quad\) Natural gas distribution 2212
0590 Electric and gas, and other combinations Pts. 2211, 2212
0670 Water, steam, air-conditioning, and irrigation systems 22131, 22133
0680 Sewage treatment facilities
22132
0690 Not specified utilities Part of 22
Construction
(Includes the cleaning of buildings and dwellings is incidental during construction and immediately after construction)

\section*{Manufacturing}
1070 Animal food, grain and oilseed milling 3111,3112

1080 Sugar and confectionery products 3113
1090 Fruit and vegetable preserving and specialty food manufacturing 3114
1170 Dairy product manufacturing 3115
1180 Animal slaughtering and processing 3116
1190 Retail bakeries 311811
1270 Bakeries and tortilla manufacturing, except retail bakeries 3118 exc.
1280 Seafood and other miscellaneous foods, n.e.c. 3117,3119
1290 Not specified food industries Part of 311
1370 Beverage manufacturing 3121
1390 Tobacco manufacturing 3122
1470 Fiber, yarn, and thread mills 3131
1480 Fabric mills, except knitting 3132 exc.
Textie and fabic finishing and coating mills
1570 Carpet and rug mills 31411
1590 Textile product mills, except carpets and rugs 314 exc. 31411
1670 Knitting fabric mills, and apparel knitting mills
1691 Cut and sew, and apparel accessories and other apparel manufacturing 3152,3159
31324, 3151

1770 Footwear manufacturing
3162
1790 Leather and hide tanning and finishing, and other leather and allied product manufacturing
1870 Pulp, paper, and paperboard mills 3221
1880 Paperboard containers and boxes 32221
1890 Miscellaneous paper and pulp products 32222, 32223,
1990 Printing and related support activities 3231
2070 Petroleum refining 32411
2090 Miscellaneous petroleum and coal products 32419
2170 Resin, synthetic rubber and fibers, and filaments manufacturing 3252
2180 Agricultural chemical manufacturing 3253
2190 Pharmaceutical and medicine manufacturing 3254
2270 Paint, coating, and adhesive manufacturing 3255
2280 Soap, cleaning compound, and cosmetics manufacturing 3256
2290 Industrial and miscellaneous chemicals 3251, 3259
2370 Plastics product manufacturing 3261
2380 Tire manufacturing 32621
2390 Rubber products, except tires, manufacturing 32622, 32629

\section*{OCCUPATION CLASSIFICATION}
(Beginning January 2020)

These categories are aggregated into 23 detailed groups and 11 major groups (see pages 10-17 and 1018). The codes in the right hand column are the 2018 SOC equivalent.

These codes correspond to items PTIO1OCD and PTIO2OCD in positions 860-863 and 868-871 of the Basic CPS record layout in all months, except the ASEC files. In ASEC, these codes correspond to items PEIOOCC and OCCUP of the Persons Record. These codes are also applicable for any other CPS supplements that collect occupation data.

\section*{LIST 2: FIPS Consolidated Statistical Area (CSA) Codes}

The following CSA's (Combined Statistical Areas) contain 2 or more Metropolitan Statistical Areas that are in the CPS sample and are individually identified on the public use files.
Micropolitan Statistical Areas are not specifically identified in the CPS and are not used to identify CSA's nor are parts of such areas coded as belonging to CSA's. The component CBSA's identified on the CPS Public Use Files are listed for each CSA.

\section*{List 3: Individual Principal Cities}

Please Note: You must use the CBSA code in combination with the city code to uniquely identify principal cities. If a county name is provided, you must incorporate the county code into any algorithm used to tabulate a specific city's characteristics. The same applies to state codes for multi-state CBSA's.

\section*{Topcoding of Usual Hourly Earnings}

This variable will be topcoded based on an individual's usual hours worked variable, if the individual's edited usual weekly earnings variable is \(\$ 999\). The topcode is computed such that the product of usual hours times usual hourly wage does not exceed an annualized wage of \(\$ 150,000\) ( \(\$ 2,885.00\) per week). Below is a list of the appropriate topcode.
\begin{tabular}{|c|c|c|c|c|c|}
\hline Hours & Topcode & Hours & Topcode & Hours & Topcode \\
\hline 1 & None & 34 & \$84.85 & 67 & \$43.06 \\
\hline 2 & None & 35 & \$82.43 & 68 & \$42.43 \\

\section*{Current Population Survey}

\section*{Selected Unweighted Tallies from the September 2022 \\ Tobacco Use Supplement}

For more information on the May Tobacco Use Supplement to the Current Population Survey (TUSCPS) see TUS-CPS series web site: https://cancercontrol.cancer.gov/brp/tcrb/tus-cps/.

Total Records in sample: 127,192 \({ }^{1}\)
- records for CPS non-interviewed persons - 25,555
- individuals within CPS interviewed households (HHs) 101,637

Not eligible for the supplement: \(47,469^{2}\)
- children and adults \(<18\) yrs old, on active duty in armed forces and CPS
incomplete - 21,914
- records for CPS non-interviewed persons 25,555
Eligible for the supplement: \(79,723^{3}\)
Supplement non-interviews: \(27,052^{4}\)
- CPS interview incompletes- \(291^{5}\)
- not randomly selected for TUS
interview - 10,806
- TUS non-response-15,955

Final eligibility for supplement interview after
excluding CPS incompletes for unknown age
and those not randomly selected for TUS
interview - 68,626
Supplement interviews 52,671
- self-response - 39,558
- proxy-response - 13,113

Supplement non-response: 15,955
The tallies that follow represent the 79,723 persons in sample who were eligible for the random selection for supplement interview (includes 291 with unknown age at time of interview).

\footnotetext{
\({ }^{1}\) INTRVIEW \(=-1\) or 1 or 2
\({ }^{2}\) INTRVIEW \(=-1\)
\({ }^{3}\) INTRVIEW= (1 or 2)
\({ }^{4}\) INTRVIEW=2
\({ }^{5}\) Age was unknown and later edited as \(18+\) AFTER completion of the data collection, thus non-interviews and no chance of random selection.

\section*{ALLOCATION FLAGS}

\section*{Current Population Survey}

For every edited item, there is a corresponding allocation flag with the prefix "PX". The last six characters of the names are the same. For example, PXMLR is the allocation flag for PEMLR. All allocation flags have the following list of possible values.
```

00 VALUE - NO CHANGE
01 BLANK - NOCHANGE
02 DON'T KNOW - NO CHANGE
03 REFUSED - NO CHANGE
10 VALUE TO VALUE
11 BLANK TO VALUE
12 DON'T KNOW TO VALUE
13 REFUSED TO VALUE
20 VALUE TO LONGITUDINAL VALUE
21 BLANK TO LONGITUDINAL VALUE
22 DON'T KNOW TO LONGITUDINAL VALUE
23 REFUSED TO LONGITUDINAL VALUE
30 VALUE TO ALLOCATED VALUELONG.
31 BLANK TO ALLOCATED VALUELONG.
32 DON'T KNOW TO ALLOCATED VALUE LONG.
33 REFUSED TO ALLOCATED VALUE LONG.
40 VALUE TO ALLOCATED VALUE
41 BLANK TO ALLOCATEDVALUE
4 2 ~ D O N ' T ~ K N O W ~ T O ~ A L L O C A T E D ~ V A L U E ~
43 REFUSED TO ALLOCATED VALUE
50 VALUE TO BLANK
52 DON'T KNOW TO BLANK
53 REFUSED TO BLANK

```
