Population Characteristics

Voting and Registration in the Election of November 1996

By Lynne M. Casper and Loretta E. Bass

C E N S U S B U R E A U

P20-504
Issued July 1998

Introduction

The right to vote is arguably one of the most important rights of citizenship in a democratic country like the United States, yet a substantial minority of U.S. citizens chooses not to exercise this right. In this report, we examine how reported voting and registration in the 1996 Presidential election compare with turnout and registration in previous elections. Since a large minority of registered citizens do not vote, we also examine their reasons for not doing so.

For the first time in this report series, we are able to include a section which looks at reported voting and registration, by selected socioeconomic and demographic characteristics among the *citizen* population, instead of among the voting-age population as presented in previous reports. We also present data which compare voting and registration among native-born and naturalized citizens. The report concludes with a section investigating registration occurring since the National Voter Registration Act of 1993 went into effect in 1995.

The information on voting and registration contained in this report is based on survey data. In the November supplement to the Current Population Survey, we ask respondents questions about whether they registered and voted in the election held on Tuesday, November 5th, 1996. The figures presented in this report may differ from figures based on administrative data or data from exit polls.

Trends in Reported Voting and Registration

Reported voter turnout was at an all time low in 1996.

According to data from the Current Population Survey, only 54.2 percent of the voting-age population reported voting in the 1996 general election (Table 1).¹ This percentage is the lowest turnout recorded since the Census Bureau began collecting voting and registration data in the Current Population Survey in

¹ Our reported voter turnout rate of 54.2 percent is higher than the "official" turnout rate of 49.8 percent, as reported by the Clerk of the House. The official turnout rate is calculated by dividing the actual number of votes cast for President by the voting-age population, while the CPS rate calculates reported voting for any office or public issue. CPS figures routinely overestimate voter turnout in Presidential election years by between 5 and 12 percent when compared with the official rate. Possible reasons for this discrepancy include an understatement of the total votes cast; overreporting of voting by CPS survey respondents who want to demonstrate their civic responsibility; misreporting of voting in the CPS due to refusals or lack of knowledge of voting on the part of proxy respondents; and survey undercoverage. For a more detailed explanation of these reasons, see Jennings, Jerry T. 1992. "Voting and Registration in the Election of November 1992." *Current Population Reports P20-466*. Washington, DC: U.S. Government Printing Office.

1964, when 69.3 percent reported voting. Data from the Congressional Research Service confirm this finding and indicate that the 1996 turnout for President was actually the lowest since 1948 when they began compiling figures.²

Turnout decreased by 7.1 percentage points from 61.3 percent in 1992 to 54.2 in 1996, representing the largest decline between consecutive Presidential elections since 1964. The number of people reported to have voted also declined from the 1992 to the 1996 election from 114 million to 105 million. Turnout declined for people of all ages, for both males and females, and for Whites and Blacks. However the drop was greater for some groups than for others—voting declined by much more for Whites (8 percentage points) than for Blacks (3 percentage points) over this period. Voting rates did not change significantly for Hispanics between

² Crocker, Royce. 1996. "Voter Registration and Turnout: 1948-1994." 96-932 Washington, DC: Congressional Research Service.

³ Data for Hispanics shown in Tables 1 and 2 include people of any race.

1992 and 1996.³ The decline was also greater among younger people than older people. For example, voter turnout fell by 10 percentage points among those aged 18 to 24, but only by 3 percentage points for those over 65.

Voter turnout estimates from the CPS are in stark contrast to exit poll estimates from the Voter News Service survey that reported an increase in voter turnout among Hispanics and black males in the 1996 Presidential election.⁴ Rather than an increase, CPS data show that voter turnout did not change for Hispanic males and decreased by 4 percentage points for black males, from 1992 to 1996.⁵ CPS estimates differ from the exit poll estimates in part because of differences in how the surveys are administered. The CPS is a nationally representative sample survey with very low nonresponse rates

¹ For selected race categories. Note that the race category used in Tables 3-6 differs from that used in Tables 1 and 2. Because more detailed race and ethnic categories became available in 1996, we are able to include the following categories in Tables 3-6: White, not Hispanic; Black, not Hispanic; Hispanic; and Asian and Pacific Islander. Also, the Hispanic category includes Whites and Blacks, but not Asians and Pacific Islanders, or American Indians, Aleuts, or Eskimos. Instead, the category of Asians and Pacific Islanders includes both Hispanics and non-Hispanics. To keep data comparable for prior years, the former race and Hispanic origin classifications are used in the historical tables (Tables 1 and 2).
 Source: U.S. Bureau of the Census, Current Population Survey (CPS).

which collects information two weeks after the election in November, while exit polls collect data at polling places on election day. Results obtained from exit polls tend to be more biased because certain groups of people, like those with higher education, are more willing to fill out survey forms at polling places.⁶

More people voted by absentee ballot in 1996 than in 1980.

In 1996, almost 9 out of every 10 voters reported that they voted in person on election day, 8 percent voted by absentee ballot, and the remaining 3 percent voted in person at a designated election office or bureau before election day. In contrast, in 1980, 96 percent voted in

person and only 4 percent voted by absentee ballot.⁷

Registration was also at its lowest point in 1996.

Approximately 128 million people or 65.9 percent of the voting age population reported that they were registered to vote in 1996 (Table 2 on page 2)⁸. This proportion was the lowest it has been for any Presidential election since 1968. Since the last Presidential election in 1992, registration dropped by 2.3 percentage points.⁹ Registration fell among many demographic groups between 1992 and 1996 — Whites, people of all ages, and

both men and women all experienced registration declines. In contrast, Blacks and Hispanics did not experience a significant decrease in their reported registration rates between these two elections.

The drop in the overall registration rate is somewhat surprising given that the National Voter Registration Act (NVRA) went into effect in 1995 requiring states to lighten the burden of registration by allowing people to mail in their registration forms, or to register when they obtain or renew their drivers' licenses or apply for AFDC, Food Stamps, Medicaid, WIC, or disability services. The 1996 Presidential election is the first to have taken place since the enactment of the NVRA. The decline in reported registration was not as large as the decline in voting (2 percentage points compared with 7 percentage points), and therefore, could not have accounted for all of the drop in voter turnout. So, why didn't those who were registered turn out to vote in 1996?

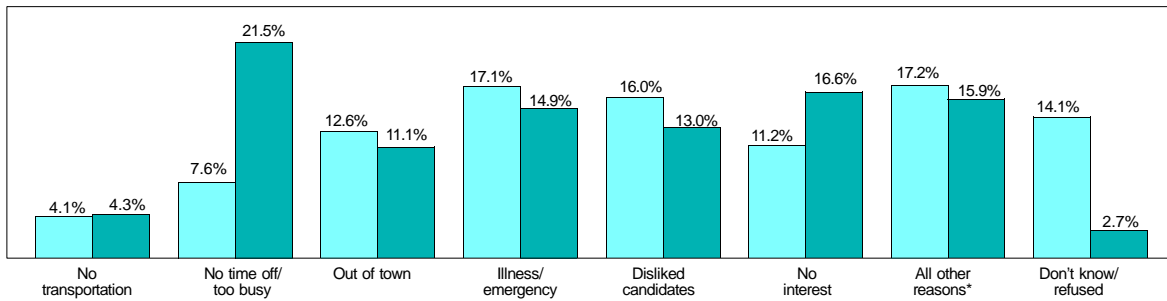

⁶ Teixeira, op. cit.

⁷ In 1980, no distinction was made between voting in person on election day and voting in person before election day. Jennings, Jerry T. 1982. "Voting and Registration in the Election of November 1980." *Current Population Reports P20-370*. Washington, DC: U.S. Government Printing Office.

⁸ In contrast, the Federal Election Commission (FEC) reported that 137 million people were actively registered for the 1996 election. However, incomplete data and a failure of some states to purge ineligible registrants may have inflated this number. Federal Election Commission. 1998. "The Impact of the National Voter Registration Act of 1993." Report to the U.S. Congress.

⁹ The FEC reported a 1.8 percentage point increase in registration in the 43 states and the District of Columbia covered by the National Voter Registration Act, compared with the CPS figure of a 2.3 percentage point decline for the nation. (Federal Election Commission, op. cit.).

Source: U.S. Bureau of the Census, Current Population Survey (CPS).

Reasons for Not Voting

More than one in five reported that they did not vote because they couldn't get time off work or were too busy.

Of the 21.3 million people who reported that they registered, but did not vote in the 1996 election, more than one in five reported that they did not vote because they could not take time off of work or school or because they were too busy (Table 3). Another 17 percent did not vote because they were not interested or didn't care about the elections. Fifteen percent reported that they didn't vote because they were ill, disabled, or had a family emergency. Thirteen percent did not prefer any of the candidates. Other specified reasons for not voting included out of town (11 percent); forgot to vote or no way to get to the polls (4 percent each); and the lines were too long (1 percent).

Reasons for not voting vary by race, gender, age and education level.

Blacks, women, the elderly, and those with less education were more likely to report that they didn't vote because they had no transportation to get to the polls compared with Whites, men, younger people, and those with more

education¹⁰. In contrast, men, younger people, and those with more education were more likely to report they couldn't get time off from work or school, or were too busy to vote than others. Not surprisingly, women and the elderly were more likely than men and younger people to report that they didn't vote because they were ill or disabled, or had a family emergency; women attend to more family obligations than do men, and the elderly are more likely to be ill or disabled. Those with only a high school degree and those not completing high school were more likely than those with more education to respond that they were not interested in or didn't care about voting in the elections. Whites were more likely than Blacks and Hispanics to report that they didn't prefer any of the candidates. Those under the age of 25 were more likely than old-

¹⁰ Note that the race category used in Tables 3-6 differs from that used in Tables 1 and 2. Because more detailed race and ethnic categories became available in 1996, we are able to include the following categories in Tables 3-6: White, not Hispanic; Black not Hispanic; Hispanic; and Asian and Pacific Islander. Also, the Hispanic category includes Whites and Blacks, but not Asians and Pacific Islanders, or American Indians, Aleuts, or Eskimos. Instead, the category of Asians and Pacific Islanders includes both Hispanics and non-Hispanics. To keep data comparable for prior years, the former race and Hispanic origin classifications are used in the historical tables (Tables 1 and 2).

er people to report that they forgot to vote.

Non-voters were about three times as likely to report they couldn't get time off work or were too busy to vote in 1996 compared with 1980.

Perhaps it's a sign of the times—the hectic schedules and increasing demands of employers in the 1990s may have contributed to the substantial increase in the percentage of people reporting that they didn't vote. Twenty-two percent of those who registered reported that they couldn't get time off from work or school or were too busy to vote in 1996 compared with only 8 percent in 1980 (Figure 1). Likewise, the proportions reporting that they were not interested or did not care about the elections increased from 11 percent in 1980 to 17 percent in 1996. It appears a significant proportion of those who are registered are more apathetic about the political process these days. In contrast, fewer people reported that they didn't vote in 1996 than in 1980 because they didn't like the candidates (13 percent compared with 16 percent).

Characteristics of People Who Vote

In previous years, the Census Bureau reported voting and registration rates for the total U.S. resident population (including noncitizens)

because citizenship status was neither directly asked nor consistently edited in prior surveys. For the first time in a Presidential election year, the Census Bureau collected detailed data on citizenship status and is now able to show voting and registration rates for the limited and more appropriate citizen-based population.¹¹ Because citizenship levels may vary among different population groups (e.g., by race and ethnicity), most of the dis-

¹¹ The CPS began asking detailed questions on country of birth, citizenship status, and year of entry in 1994.

cussion in this section refers to the reported voting and registration patterns of citizens.

Of the 193.7 million people 18 years and older in November 1996, 179.9 million were estimated to be citizens (Table 4). Separating the citizen population from the resident population increases the voter turnout rate in the 1996 presidential election to 58 percent of the citizen population up from 54 percent of the resident population. Presenting voter turnout rates based on the citizen population 18 years and

over compared with the resident population also significantly increases the voter turnout levels of both Hispanics and Asians and Pacific Islanders — by nearly 20 percentage points for each group — because so many of them are not citizens. Obviously, voter participation rates for these two groups have been underrepresented historically.

Generally, people with the biggest stakes in society are the most likely to go to the polls: older individuals, homeowners, married couples, and

¹ For selected race categories. Note that the race category used in Tables 3-6 differs from that used in Tables 1 and 2. Because more detailed race and ethnic categories became available in 1996, we are able to include the following categories in Tables 3-6: White, not Hispanic; Black, not Hispanic; Hispanic; and Asian and Pacific Islander. Also, the Hispanic category includes Whites and Blacks, but not Asians and Pacific Islanders, or American Indians, Aleuts, or Eskimos. Instead, the category of Asians and Pacific Islanders includes both Hispanics and non-Hispanics. To keep data comparable for prior years, the former race and Hispanic origin classifications are used in the historical tables (Tables 1 and 2).

people with more schooling, higher incomes, and good jobs.¹²

Whites, women, older people, and those who are married are more likely to vote.

The voter turnout rate among citizens is higher for Whites (61 percent) than for Blacks (53 percent). Hispanic citizens continued to vote at lower levels (44 percent) than Whites and Blacks; Asians and Pa-

¹² Lewis, Pierce, Casey McCracken, and Roger Hunt. 1994. "Politics: Who Cares?" *American Demographics*. Vol. 16, No. 10.

cific Islanders voted at levels similar to Hispanics (45 percent). Blacks and Hispanics have lower educational levels, are younger, and are more likely to be in poverty than are Whites — these characteristics have been associated with lower turnout rates.¹³

Among citizens, women were significantly more likely than men to vote in the 1996 Presidential election (60 percent compared with 57

¹³ Lewis, et al., op. cit.

percent). Although historically men have voted at higher rates than women, the gap has been narrowing, and women's voting rates surpassed those of men for the first time in the Presidential election of 1984 (see Table 1). This trend coincides with more women entering the workplace and, thus, having higher stakes in election outcomes. The women's movement also grew, encouraging women to become more politically active. These

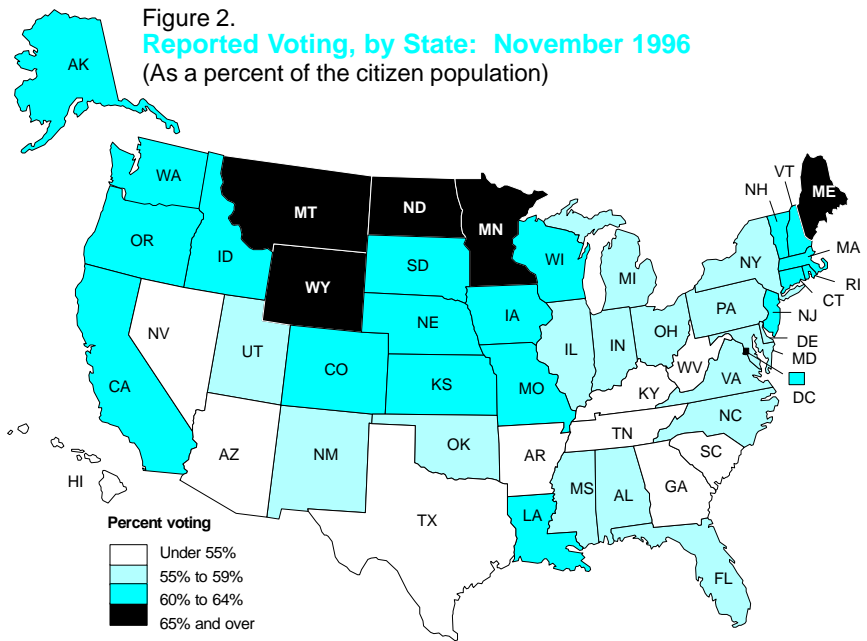

trends may have helped to increase women’s voting participation relative to that of men.

The voting rate is much higher among older age groups than younger age groups. The peak years for voting participation are evident among 55 to 74 year olds, where more than seven out of every 10 citizens voted in the 1996 election. The lowest citizen voting rates are for 18 to 24 year olds, where slightly more than one in every three voted. A key difference between these two groups is registration — while 80 percent of older citizen voters are registered, a little more than one-half of younger citizen voters are registered. The young, especially in their mid-twenties, are the most transient part of the population, making it necessary for them to register more often; this may lead to lower registration levels for this age group.¹⁴

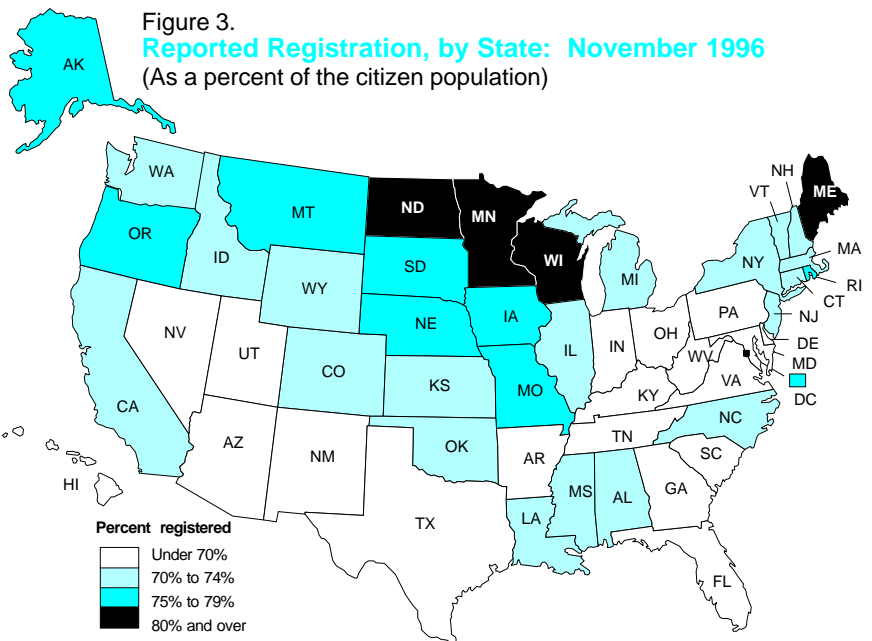

Marital status is related to the propensity to vote. Married individuals (66 percent) are more likely to vote than widowed (60 percent), divorced (50 percent), or separated and never-married individuals (44 percent each). Separated and never-married individuals are generally younger, which may also influence their voting patterns.

People with more education, higher incomes, and employment are more likely to vote.

Education is a key socioeconomic characteristic related to voting behavior, because it also is related to a person’s occupation, income, and economic position. Education may also influence an individual’s interest in and commitment to the political process; people with more education are generally more likely to vote. In 1996, citizens who had bachelor’s degrees were nearly twice as likely (74 percent) to report that they voted as those who had not completed high school (39 percent). At each level of educational attainment, people are significantly more likely to vote than the next lower level. Although there are 16.3 million more citizens 18 years and over who had less than a high school education than who had an

advanced college degree, relatively low registration and turnout rates among those who did not complete high school resulted in almost as many people with advanced degrees going to the polls (10.6 million) as those with no high school diploma (11.3 million). Together, people with bachelor's and advanced degrees made up 29 percent of those who reported that they voted, compared with 11 percent for those who did not graduate from high school.¹⁵

The greater the income and occupational status of an individual, the higher the propensity to vote.¹⁶ Over 70 percent of citizens living in families whose total income was \$50,000 or more reported voting in the election, compared with less than 40 percent of those with a family income of less than \$10,000. All together, more than two-fifths of those living in families who voted in the November 1996 election had family incomes over \$50,000.

¹⁵ The CPS estimate of the proportion of voters who had at least a Bachelor's degree (29 percent) is much lower than the estimate based on the Voter News Service exit poll data (43 percent). (Teixeira, op. cit.)

¹⁶ Lewis, et al., op. cit.

A person's employment status is a principal indicator of voting participation. In the 1996 Presidential election, 59 percent of employed individuals reported voting compared with only 42 percent of those who were unemployed. Individuals who are not in the labor force, a group that includes many retired people, reported a voter participation rate of 58 percent, which is the same as the 58 percent reported by those in the labor force, both employed and unemployed combined.

Homeowners and longtime residents are more likely to vote.

Individuals with more established residences, as measured by homeownership and duration of residence in the community, were more likely to vote than those who rented housing or recently moved into their homes. Sixty-four percent of homeowners reported voting compared with 42 percent of citizens who rented housing. Similarly, citizens who had lived in the same house for five or more years had a voter participation rate of 70 percent, significantly higher than rates for individuals who had lived at their

current residence for shorter durations of time.

People living in southern states are the least likely to register and vote.

In general, people residing in southern states were less likely to register than those in other regions (Table 4 and Figures 2 and 3). Similarly, southern states also tended to experience the lowest voting rates. Midwestern states recorded the highest level of registration, due in part to the fact that people are able to register on election day in some of these states.¹⁷ Almost 3 out of every 4 citizens in the midwest were registered to vote.

Voting and Registration Among Native-born and Naturalized Citizens

Immigrants to the United States who become naturalized citizens gain an important right — the right to vote. Of the estimated 193.7 million people of voting age in November 1996, 21.9 million were foreign-born (excluding people born

¹⁷ Note that Idaho, Minnesota, New Hampshire, Wisconsin, and Wyoming have election day registration. North Dakota has no voter registration.

abroad of American citizens). Of those, 8.2 million (38 percent) had become naturalized citizens and were eligible to register and vote in the November 1996 election (Table 5). Data from the November 1996 CPS for the first time answer the question if these newly enfranchised citizens are more likely to exercise their right to vote than their native-born counterparts who have had that right from birth.

Naturalized Hispanics are more likely to vote than native-born Hispanics.

Comparing total populations, 59 percent of native-born and 53 percent of naturalized citizens reported voting in the November 1996 election. Whites account for the main component of this difference as they constitute the majority of the citizen population; native-born Whites are more likely to have voted than naturalized Whites (61 percent compared with 58 percent).

However, naturalized Hispanics (53 percent) are more likely to vote than native-born Hispanics (42 percent), by about 10 percentage points. In contrast, native-born Blacks and Asians and Pacific Islanders voted at about the same rate as naturalized Blacks and Asians and Pacific Islanders.

Voting participation differs among naturalized citizens by region of origin.

Naturalized citizens from other North American countries, mainly Canadian-born, are more likely to vote than naturalized citizens from Latin America and Asia. Naturalized citizens from other North American countries are most likely to register compared with those from other regions. Naturalized citizens from Asia are the least likely to vote (47 percent).¹⁸

¹⁸ No comparisons can be made about naturalized citizens from Africa because the sample size is too small to yield accurate estimates.

Reported Registration Since January 1, 1995

Unlike most other major democratic countries, the United States requires citizen-initiated registration in order to vote.¹⁹ The complexities of the registration process in some states in the past have been implicated in the low voter turnout rate in the United States compared with that in other democracies. In an effort to lighten the burden of registration, and thereby increase voter participation, Congress passed the National Voter Registration Act of 1993. This act was designed to reduce the individual's costs associated with voting by incorporating registration into necessary transactions citizens must complete in order to comply with regulations at other public agencies. For example, in order to operate a motor vehicle, a driver's license must be

¹⁹ Highton, Benjamin and Raymond E. Wolfinger. 1995. "Anticipating the Effects of the National Voter Registration Act of 1993." Paper presented at the 1995 Annual Meeting of the American Political Science Association, Chicago.

obtained. Also, in order to receive AFDC, Food Stamps, Medicaid, WIC, or disability services, forms must be filled out to determine eligibility. The NVRA sought to incorporate voter registration into each of these processes, thereby simplifying registration. NVRA also allowed all citizens the right to register by mail.

Almost 3 in 10 people registering to vote since January 1, 1995 did so when they obtained or renewed their drivers' licenses.

According to the CPS, 19.5 million people reported that they registered at least once since January 1995 (Table 6).²⁰ More people reported registering when they renewed or obtained their drivers' licenses than with any other single method — 28 percent.²¹ Clearly, people have been taking advantage of the opportunity to register when they apply for their drivers' licenses. Many people also benefitted by NVRA's mail-in provision, as 19 percent of people registered in this way. Not as many people have taken advantage of the component of the NVRA which creates opportunities to register at public assistance agencies and offices serving people with disabilities — only 3 percent registered in this way. This is expected since public assistance agencies serve many fewer people than do motor vehicle offices.

Many people reported taking advantage of the more traditional methods by registering in person at a county or government registration office (about 20 percent). About 16 percent reported that they had registered in a registration drive or at a

²⁰ The FEC reported that a total of 41 million voter registration transactions took place in the 43 states and the District of Columbia which are covered by the NVRA during 1995 and 1996 (Federal Election Commission, op. cit.). Some people may have registered more than once since 1995, but because the CPS only records the most recent registration occurring since 1995, the survey undercounts the total number of registration transactions. The FEC also estimates that 27 million of these 41 million registrations were added to the rolls during 1995 and 1996. Our data indicate that only about an additional 9 million potential voters were added to the rolls between the 1994 and 1996 elections. However, registration rates are always higher in Presidential election years. Comparing registration between Presidential election years, we find 1 million more people were registered to vote in 1996 than in 1992, the nearest Presidential year, compared with the FEC estimate of 3.4 million.

²¹ The FEC also reported that the most productive feature of the NVRA was voter registration in motor vehicle offices (Federal Election Commission, op. cit.).

booth. This response would include registering when someone came to your door, at a political rally, or at a registration drive at the mall, supermarket, fair, post office, library, or church, for example. Of the remaining people who reported having registered since 1995, 5 percent reported that they registered at school, on campus, or at a hospital; 3 percent registered at the polls on election day; and 1 percent registered in another way or at some other place.

The method of registration varies by race, nativity status, and metropolitan status.

Whites, native-born citizens, and those residing outside of central cities or in nonmetropolitan areas were more likely to have registered while obtaining or renewing their drivers' licenses than were Blacks, Hispanics, naturalized citizens, and those residing inside central cities. In addition, Whites, Hispanics, Asians and Pacific Islanders, naturalized citizens, and those residing in metropolitan areas were more likely to have mailed their forms to an election office than were Blacks, native-born citizens, and those residing in nonmetropolitan areas. Blacks, Hispanics, and those living in central cities were more likely than others to report that they registered at a registration booth, indicating that special registration drives are an especially important method of registration among these groups.

People with different socioeconomic backgrounds benefit from different NVRA provisions.

The registration behavior of low income and less educated individuals differs from that of high income and more educated individuals. People with family incomes below \$15,000 per year or less than a high school education are more likely to use public assistance agencies and voter registration booths, while those with family incomes above \$15,000 or at least a high school education are more likely to register while obtaining a driver's license or by mailing in a form.

Source of the Data

Most estimates in this report come from data obtained in the Voting and Registration Supplement to the

November 1996 Current Population Survey (CPS). Some estimates are based on data obtained from the November CPS in earlier years. The Bureau of the Census conducts the CPS every month, although this report uses only data from the November survey.

Accuracy of the Estimates

All statistics are subject to sampling error, as well as nonsampling error such as survey design flaws, respondent classification and reporting errors, data processing mistakes, and undercoverage. The Census Bureau has taken steps to minimize errors in the form of quality control and editing procedures to reduce errors made by respondents, coders, and interviewers. Ratio estimation to independent age-race-sex-Hispanic population controls partially corrects for bias attributable to survey undercoverage. However, biases exist in the estimates when missed individuals have characteristics different from those of interviewed individuals in the same age-race-gender-Hispanic group.

Analytical statements in this report have been tested and meet statistical standards. However, because of methodological differences, use caution when comparing these data with data from other sources. Contact Andy Zbikowski, Demographic Statistical Methods Division, at 301-457-4220 or on the Internet at azbikows@census.gov for information on the source of the data, the accuracy of the estimates, the use of standard errors, and the computation of standard errors.

More Information

A package of voting and registration tables including 14 detailed tables, 6 summary tables, 1 state table for citizens, and 23 historical tables (112 pages), providing voting and registration information by several demographic characteristics including, for example, gender and race by state, family income, metropolitan/nonmetropolitan residence, region, tenure of housing unit, and other variables is available as PPL-89 for \$29.00. This package includes the "Detailed tables" and "Appendix tables" that were presented in previous voting and registration reports in the P20 series. To

receive a paper copy, send your request for "PPL-89, Voting and Registration in the Election of November 1996," along with a check or money order in the amount of \$29.00 payable to Commerce-Census-88-00-9010, to U.S. Department of Commerce, Bureau of the Census, P.O. Box 277943, Atlanta, GA 30384-7943, or call our Statistical Information Office at 301-457-2422. A copy of these tabulations will be made available to any existing CPR P20 subscriber without charge, provided that the request is made within 3 months of the issue date of this re-

port. Contact our Statistical Information Office at 301-457-2422. Detailed tables and some time series data also are available on the Internet (<http://www.census.gov>); search for voting and registration data by clicking on the "Subjects A-Z" button and selecting "Voting" under "V" or "Registration" under "R."
